With the R-75, you really have no choice, do you?

> The R-75 is King for this.

Over what? All high end receivers are stable and do ECSS mode extremely
well. Most (but not the Icom) also do AM sync very well.

I wonder if the Chinese DE31 is a slightly simplified version of Sony's tunable loop antenna described in Sony's U.S. patent (6,054,965). Does anyone have a schematic of the DE31?

The only source for a DE31 appears to be direct from mainland China at a total cost of about $30. Are there any other sources?

Yes, you do have a choice to use it in AM mode... I'd use ecss for DX'ing
with any rig.

>> The R-75 is King for this.
>

Without benifit of a dual PBT. Only Icom has that. I've been using the
R-75 long enough to say that it is a tremendously benificial feature for
DX'ing extreamly weak signals.

>Most (but not the Icom) also do AM sync very well.

AM sync ??? I thought we were talking about "real" DX'ing. How did we get
on program listening ??? Oh... OK, I get it...You just feel like bashing
the R-75 because you shelled out a chunk of money for a rig that isnt as
capable. No AM sync... I mean NO AM sync is ANY help with very weak signals.
AM sync comes in handy for program listneing on signals with moderate fade.
Not with "real" DX'ing. Not that it has do with DX'ing but my R-75 has the
Kiwa modded AM sync. It works just fine for program listening and sounds
great. Along with being a good rig for program listening, it is better for
DX'ing then any rig out there under $2,000.

Horse sh*t. You just keep telling yourself it's better than the higher price rigs. It's not. My JRC has over 500 bandwidth settings, a great sync detector and better stability for manual ECSS. We all hear the same signals you do, Michael. All our receivers are rock stable. We can all do ECSS extremely well and we didn't need any mods! Some of these radios have features you haven't experienced.

The R-75 is a nice radio - for the price. Why pretend it's something it isn't?

When you say your JRC are you talking about the NRD-545 DSP or a different
model?

Thanks for the info. I'll be doing to research on antennas, but I also think
I'm going to get a good tabletop reciever as well.

As far as my location is concerned, there is a small power substation about
250 meters from my house. Is that going to generate enough interference to
negate getting a better receiver and antenna setup?

If you are talking about the NRD-545. I've used this rig. It is over priced BIG TIME. Sure, it is a nice looking radio and it is built rock solid. I also found it to be tinny sounding. I'd go so far as to say the audio quality sux !!! I had to use it through my PC speakers and work my software mixer to get it to sound tolerable for program listening. What does that radio sell for ??? $1,800.00 ??? I'd rather use my R-75 for program listening over the NRD-545 because the 545 sounds so tinny and hollow.

If you want to spend more money and get a more capable rig then the R-75 , the NRD-545 is NOT the answer. I'd say go with the Icom 746 pro. Less money then the NRD-545 at $1,500 and more capable.

Michael

I assume you are listening to your R-75 with an external speaker, as the
stock speaker sound is equivelant to the sound of a cheap transistor radio.
I know, I have one. By the way, I love my R-75 but I can't imagine ANY radio
sounding worse than the R-75 thru the stock speaker...

Thanks. I'll take a good look at both the R-75 and the 746 Pro.

Yes... I use an external. I have two options set up. I can use it through my RCA 40-5000 external speaker, or, if the signal really needs to be dressed up, I pipe it through my PC's sound card. I have a five piece PC speaker set up with a sub woofer and a full software mixer/eq. I can get anything to sound good with that. It comes in especially handy on signals with muffled audio. I can really thin it out with the software eq.

I look forward to reading your posts.

Yes the wrap broke the link. You can prevent this by bracketing the link with < and >. I'll copy your link as an example. It's broken above and working below.
<http://bwccat.belden.com/ecat/jsp/Index.jsp?&P1=undefined&P2=undefined&P3=undefined&P4=undefined&P5=undefined&P6=undefined>

I'm familiar with tri-ax.

The point I was making is coax that is not grounded on both ends is an antenna whether it was intended be one or not. You can't properly ground the end of the coax at the antenna because it is up in the air so your only chance of the coax behaving as a shielded transmission line is that it is terminated in its characteristic impedance. Those are the two choices otherwise the coax is part of the antenna. Using tri-ax may help but it won't be as good as either grounding both ends or terminating both ends properly on a coax cable.

The 746 Pro is actually a transceiver. You dont have to use it to transmit
of course. I wouldn't recommend using it to transmit either. Serious
problems with the transmitter section. Regardless, as a DX'ing receiver, it
would be a great choice.

< Snip >

As I posted in the other thread if you disconnect the antenna from the coax then you need to put a 50 ohm resistor across the end otherwise the coax will behave as an antenna. You sure will pick up stations if you don't terminate it.

With the far end not grounded or terminated from the radio the outer shield will pick up passing EM wave energy. That energy races up and down the coax shield where the current induces a complementary voltage on the center conductor. The result is a differential voltage at the radio end and yes it works pretty darn good.

When you choke the coax you prevent the RF current on the outer shield. It should be more effective to just terminate the far end with 50 ohms than using a number of chokes space along the coax.

Yep, I've seen the one in NH. WFEA-1370 if I recall properly.

I thought WBT had to replace theirs with traditional towers after
Hurricane Hugo damage? May be remembering that wrong.

The City of Brentwood has built a nice park about two city blocks from
the WSM site, and a sidewalk just outside the property fence. You can
now safely walk along the fence & admire the tower & the rest of the
facility.

Speaking of location: I just did a simple test with my portable. I drove out of town to a fairly remote area with no power lines or other nearby sources or interference. Just using the whip antenna I was able to pick up a lot of stations with little noise. But when I returned home, I couldn't pick up most of those stations at all, and most of the others were covered with noise. I'm wondering now if any receiver/antenna setup would do me much good due to my apparently noisy location.

Appreciate the concern...I am more worried about the unpatriotic attitudes and behavior of the Americans back home...the Iraqis voted while most Americans stayed home....the economy is in shabbles, and true the state and local tax rates are highes than the US tax rates, Americans have not recalled one representative for poor execution in their jobs...with 76% of terrorists web sites based in the USA.....we elect professional politicans ex-lawyers (some never practiced law, and what does law have to do with leadership????)...they kill the 2 term tenure bill and we do not have a say....I think Americans do not deserve America...bring the foreigners in, sweep out the unconcerned, and put some new direction and vitality into those who earn their freedom by deed and actions, not solely by birthrite.

Wake up America.....Arabs over here hate us just because...no logic...no reason...not religious or otherwise motivated....these cowards could not lift a finger and fight for their own freedom because of their upbringing, their lazy male-eccentric culture, and bible-thumping equivalents in the form of mutawahs or inmans getting kicj back from the dictators and kings they serve. They have never been are friends, betrayed us in WW II and during the Cold War despite are anti-Israel stance until 1967.....and as part owners of CNNI, they beam what they want their people and you back there to see...getting their story from Dubai because there is no freedom for a free press to travel at will in the Middle East excepting Iraq at the moment, do not believe a lying negative word of CNN...damn Ted Turner and the whole liberal democratic lot...like to put a gun in his hand and the group and see what "real men" are made of.....

The truth is: America is at war against an idealogy that simply will not die without a major defeat of the present regimes in the area; America has no friends unless we put something in their hand, excepting a few; Americans are ungrateful and undeserving of the Constitution of the United States of America....when I see other countries, especially poor little Italy salute their dead at the airport, cathedral, and at the grave site with their president, chiefs of staff of the various military departments, and it is covered live on television so all of their citizens can share in the responsibility and remorse of the moment, I feel that Americans just don't get the big picture.......yes, this war is going to be just like Vietnam, not because of the battlefield, or lack of conditions, or the nature of the enemies at hand...it is exactly like Vietnam because of the American citizens back home more concerned about those idiotic WWF or ESPN events than the future of their country or children. If you have to live your life through hero worship, then you have not lived at all. When you have the means and power to control your government and you sluff it off because

you don't have the time...well, perhaps we should let a few leak back home with that same attitude and sense of non-patriotism. The fact is that we cannot, and would not...26% of Americans carry the burden for the lot....I have a rather simple solution..serve to earn the right to vote, or get no vote at all...then when you pick these self-serving clowns and political thiefs youd think back how lucky it is to be still alive, and god's blessing to be an American.

Source record: 25109

I first tried grounding each end but found the diagram in
<http://www.members.aol.com/WA1ION/nrants.pdf> to
be much more effective in reducing QRM in my location.
Putting the coax 18" underground helped a lot also.

I tried the choke presented in
<http://www.dxing.info/equipment/coax_leadin_bryant.pdf>
to be nearly as effective with each end of my coax grounded.

With both ends isolated from ground and the adition of the
inductance in/on/with the coax it completely removed all the
noise from our home. This is before I connect an antenna.

I had wondered about the QRN versus signal I was receiving
on the 20' run of wire from the ground mounted 9:1 transformer.
I wanted to mount the transformer 20' up where the horizontal
wire ended. I tried coax first and while it was better then having
the 9:1 on the ground, it wasn't "perfect". Since I had the triax I
decided to try it. I tried this once before but got rushed due to rain
movng in. This time I made sure to connect both ends as discribed.
I suspect the "magic" is the 1:1 isolation transformer that connects
the inner conductors of the triax to the coax that carries the signal
to
the house.

IF I could arrange for for my ~70' wire antenna to be a perfect 1:1
match to my 50 Ohm coax across the 100KHz through `30MHz I
suspect I would have less noise. The way cobbled this mess is the
result of trial and error. I am not offering it as the best, or even a
preferable setup. But for me, in this location it gives me the quitest,

as in reducing man made noise, conditions I have yet managed to
achieve. It was more then a bit of a hasssle to get permission from
the electrical instector and our insurance homeoffice to allow a "non
conforming" isnstallation. A strict following of the NEC would require
all grounds to be bonded. I didn't go to all this trouble just for the
fun of
being odd.

Several years ago someone in this group made the suggestion of
using a cathode follower at the wire to coax interface to force a 50
Ohm match. One of these days I plan on trying that now that I have
a usefull supply of Nuvistors and a diagram that I suspect will work.

I would prefer to live in a quiter (RF) location. But I can't retire
yet,

so I must live reasonably close to where I work. I am half afraid that by the time I retire "broadband over powerline" will have made HF useless.

For very weak signal HF reception, designers go to great lengths to prevent any current flowing on the outside of the braid. It will be coupled via inductance. Our astronomy friend's lab had 1:1 low loss RF isolation transformers at the antenna, before the grounding bulk head, and at the receiver. She demonstrated the increase in noise when any of these where removed by just jumpering across from the incoming braid to the outgoing braid. She also demonstrated that audio isolation transformers were also a "must have". She used balanced antennae so had to use a transformer to match the balanced antenna to coax. She experimented with twinax but found it to produce more complications then it was worth.

I was concerned about the loss and Ms C pointed out that HF reception is almost always limited by the backgroudn RF noise. And that if you get an increase in noise when you connect the antenna, you are almost certain to have enough RF. Most "decent" radios have at least a ~30dB lower noise floor then the atmospheric/comsic noise. So a few DB loss is well worth the 10dB to 20dB reduction in interference a "proper" installation can achieve.

(This is why a single passive transformer "power divider/coupler/ hybrid" will not impact >99% of our reception. Even with the additional ~3.25dB loss, the real world noise still dominates reception.)

Most of us don't need anywhere near this level of complexity. The standard "Doty" "L" antenna is likely to be all that >90% of us would need. The "nrants.pdf" will help >90% of the rest. Few of us will have coax long enough for the issues addressed in the "coax_leadin_bryant.pdf" to be a major concern. My system may be viewed as overly complex, and of "flawed design", but it is the best I can do right here and right now.

With that power substation just down the road from my house I'm wondering if there is a quiet area in my yard. I'll take my radio out in the backyard this evening (too hot now, almost 100F out there!) and see what I come up with.

Hello,

I just finished reading all the posts here to date (June 16, 2005 at 2040 UTC) and I must say that most of the replies to you are well-reasoned and thought out. I think that if you follow many of the suggestions that have been written, you will be pleased with the results you obtain.

May I make my suggestion for a good receiver/antenna combination? Go on to the Universal site and look at ther AOR AR7030 Plus receiver. I have had one for over a year now and each day I am more impressed with it. In addition to being a superb receiver, one of the finest ever designed, it can also be controlled from your computer via a free computer program called RxWings, if you are interested in that sort of thing. I've been using this computer program for almost as long as I have owned the receiver and it is, in my opinion, first-rate.

I would recommend buying the NB7030 Noise Blanker/Notch Filter option for the radio.

As for an antenna, it seems that you, like me, live in an electrically-noisy location. Yes those power lines 250 meters away from your location are going to cause problems (as you have already discovered). The solution? A Wellbrook ALA 330S Active Loop Antenna, in my opinion the finest shortwave antenna currently on the market. You can go to Wellbrook's website to view all the particulars; you would buy it from THE SHORTWAVE SHOP in the UK (Wellbrook's only dealer) if you want to use a credit card. The results achievable with this antenna in an electrically-noisy location are nothing short of astounding. A TV rotator is helpful as the antenna, like all loops, exhibits directionality especially at lower frequencies and you might as well take advantage of this functionality.

That combination, the AOR AR7030 Plus (with the NB7030) and the Wellbrook ALA 330S is not cheap. Nor is the antenna "convenient" to buy. And, especially, the installation of the antenna is quite a precise affair - you must be willing to carefully read and follow (to the letter) the quite-clear installation instructions (with one exception: placement of the antenna is not at all critical as the instructions suggest; I have mine mounted in my attic on a Radio Shack rotator where it performs superbly; it can be mounted outdoors, high or low - even on a deck rail or fence post).

The learning curve of the AOR AR7030 Plus, though nowhere nearly as difficult as PASSPORT purports, is still something that must be mastered. (Of course this applies to any communications receiver; it's

not enough to know what buttons to press; you have to know when and under what circumstances to press them! This comes only with experience.)

All that notwithstanding, if you can afford it (and apparently you can), the results obtainable with the AR7030 Plus and the Wellbrook ALA 330S are well-worth the money!!

I wish you the very best of luck with whatever you purchase.

Joe

I don't doubt quantum physics. Never did - just believe that it's still a *theory* and requires more proof to fill in the blanks, of which there are many.

And no, I do not believe the Aussies "teleported" anything faster than the speed of light. If they did, it would have been front page everywhere, and thousands of scientists would be doing their best to exploit the new phenomena every day. I certainly do not remember hearing about this in any substantial way.

I live in the US, as if that had anything to do with it. If you are accusing me of national favoritism, you've got me wrong.

Unless you have something of value to say on this subject (I don't why I should expect this based on history), I'm done with this discussion. Go preach to someone who will listen...try an Afghan hound, I hear they pretty empty-headed.

Aside from that, I have read that the main fault line(s) affecting
California are pushing the land mass northward and INLAND, not out to sea.

Bruce,

I can't say about newspapers, but I do know this has been on
national/international news, and has been written up in several scientific
journals. The Aussies have been working on the project for years. It's not
anything like Star Trek, they've only transported a light beam, but hey,
it's a start.

Having seen the link you provided, I now recall the story...thanks for this. Actual transport of the light "beam" has not happened in this experiment - however, recreation of the photons involved at a substantial distance away, essentially instantaneously, is what has occured - and I agree, it is an amazing and wonderful advance.

Note here, though, that it does not involve the same photon - the initial photon is destroyed in the process of recreating it elsewhere - and neither matter nor energy actually is transported through space or time, or transported faster than light. As the article says, it is not Star Trek. If one reads further, it is described as "spooky motion" by Einstein, or motion at a distance. The fact that Einstein predicted this, and that by implication it does not conflict with relativistic theory (which has successfully passed every test to which it has been put, by the way), means that the Aussies, for all the importance of their success, have not broken that universal speed limit.

One thing that electronics people may know here is that something analogous happens in transistors - electron tunneling, in which an electron, a massive object compared to a photon, disappears on one side of a barrier, to reappear on the other without actually having passed through it. Not a duplicate of the light experiment, but another clue to the quantum world that is invisible in most practical ways.

I still do not buy the theories of the screwball John originally cited, however. When he starts to invoke supernatural aspects and misuses scientific words, he loses my support.

Listening moments ago to the Voice of Viet Nam on 6.175 mhz and during the broadcast there are two alternating tones separated by 5 secs. Beeeep (higher tone).....Booooop (lower tone). Anyone know what's up with those tones? Jamming? Time would be 0100 UTC. Story was about the 10 year anniversary of normalization of relations with the U.S.

Unfortunately, in our current hysterical, politically correct
society, all you have to do is invoke national security or child
safety and previously assumed civil liberties go out the window.

It used to be that your records were secure. Now all someone
as to do is assert that they want access "in connection with an
investigation into terrorism" (and you're not allowed to investigate
that claim) and they grt access with no meaningful judicial oversight.
And the WH wants this sneak-searching power expanded.

Similarly, there used to be statutes of limitations for crimes
involving children or other offenses, but they have been retroactively
revoked. It used to be that a person could be convicted and serve the
jail time assigned, then be released on the understanding that the
debt to society had been paid. No more -- they can be housed on jail
grounds on the basis that, time served notwithstanding, they were
still deemed to be "unrehabilitated". They can be tracked and hounded
out of any chance of starting a new life.

Mind you, I have no problem if society wants to establish new
rules for search and seizure or for penalties for lawbreaking, but
these should never, ever be imposed retroactively. There is a contract
which we make with society and it can only cause contempt for the
contract if it can be changed in ways which call previously understood
rules into question based on the law enforcement fad or public
hysteria of the day.

1503. cambodian hostage taking/killing

Newsgroup: rec.radio.shortwave

I picked up a truckload of plywood for my dad and step mom the other day. My dad is cutting them to size and painting them to withstand the hard, blown rain and ground water if we get hit again. I can't afford any plywood this year, so I just have to take my chances. I had enough pieces of scrap plywood to do the west side of my house, but it seems to have disappeared into my dad's woodworking projects over the last four years that we didn't have any hurricane worries.

There were two different reports. One said that the child was killed when there was a shoot out with police when the kidnappers were trying to get away. They were not sure if it was the police or the kidnappers who shot the child. This report was in between two airings of the version you just posted.

This well may be a repetition of what happens in Russia when the police go into a hostage scene and kill more people than the hostage takers.

If enough witnesses come forward, there may be an answer in the future.

According to their promo on WSM online, its 804 foot.

I'd like the nickel tour of the transmitter site and to see all of
the Ryman Auditorium, but I doubt I'll ever be able to travel that far,
again. I've always wanted to see the Grand Ole Opry at the Ryman
Auditorium, but I never got the chance. I have driven through Tennessee
twice on I-75 on a Friday night back in the early '70s and didn't have
time to stop. :(

I'm glad the good senator clarified that the VOA was not used for propaganda purposes.

I'm relieved that after all these years that my perception the VOA was a propagand machine was completely wrong. So really it's just a big infomercial suggesting we do it the american way or else.

I'm glad the good senator cleared that up for me.

What a hoot -- there are plenty of cops in the US who are
continually committing crimes (dropping evedince where it didn't
exist, extortion, roughing up suspects out of sight of cameras) --
they're just unindicted due to the code of silence.

Not any more -- see the recent story on a grandmother
accommpanying a class trip. She accidentally left a sandwich knife
(one of three she had used for making lunches, serrated and with a
blunt, rounded tip) in her check on. She was fined $500 and put on a
no-fly list. When she demanded a receipt for her seized possessions,
she was told it was a matter of national security and they didn't have
to give her anything. When she asked what about her constitutional
rights, the answer was, "As of right now ... you don't have any."

At least the Nazis we hired for the space program contributed
something to the US. The Nazis we hire for TSA strike at the roots of
the Constitution. They're nothing but a treasonous pack of fascists.

So it's OK to wish death on them because they don't agree with
your norms? I'd be very inclined to lie my way onto any jury trying
you, you moral-less POS.

Two years ago, we were just a few miles from Nashville, visiting Andre
Norton in Murfreesboro.. the first and only time I was ever within local
signal range of WSM. Even happened to be on a Saturday night, so I got to
listen to the Opry. I should have taken that opportunity to visit the
station and/or the transmitter site, as I won't have a reason to be in the
area again.

Thanks. I'll take a good look at both the R-75 and the 746 Pro

I wouldn't bother with the 746 pro unless you are planning to
get a ham ticket...I just don't see much point in spending
money on a transmitter, when that could be saved, or
applied to other receiver features.. Also...A 746pro ain't
exactly cheap...I would think a R-75 costs much less, and
is just as good for SWL purposes. I think the R-75
would be a good choice. You are not going to hear anything
on one, that you couldn't hear on the other...Actually, this
is basically the case between any of the better radios...
Some of the PC win radios , ten tec, etc, are pretty good.
They have lots of features you can diddle with...But...
I sorta prefer a stand alone radio...IE: If I decide to take it
camping, who wants to have to drag along a PC, etc...
I have many decent radios, but for SWL I use my little
IC-706mk2g the most lately...
http://www.icomcanada.com/products/amateur/706mk2g/706mk2g.htm
But, like the 746, it's a transceiver..But...I'm a ham, so it's
not a waste of money...:/ I like it because it covers LW to UHF,
all modes, in one radio. 30hz to 200 mhz, straight line,
and then covers from 400-470 mhz. So I can listen to HF,
or switch to other stuff like aircraft, police, etc...Has 4 scan modes,

and is a good scanner...Good on MW too...
Most versatile radio I have, hands down.
I could sell everything I have, and keep that one radio, and
survive quite ok. At one point, they were down in the $750
range, but I hear due to the devaluation against the yen, the
prices are back up to about $900 or so...Thats what I paid
for mine in 2001....You can get the HF only R-75 for a good
bit less than that...MK

A Bit Closer to You

Dominica is a speck on the world map, a beautiful Caribbean island smothered in dense volcanic jungle. With a population smaller than a typical British country town and landing space for nothing but the smallest planes, it is off the usual tourist trail.
But the island has found itself at the center of an international power struggle that will reach a climax in London in July. Ministers and diplomats from the world's richest countries have flocked here brandishing open check books, suitcases stuffed with cash - and, in some cases, muttering dark threats. The Caribbean nation may be home to fewer than 70,000 people, but it has one asset that other countries are prepared to pay big money for: a vote on the international body that sets the rules for commercial hunting of whales. With that vote, Dominica has a voice equal in weight to that of the US, the UK or Japan.

Dominica's Ministers have enjoyed a string of overseas trips with lavish VIP treatment normally reserved for royalty. Keen to get a ban on whaling lifted, Japan has flooded the country with cash and aid in the hope that Dominica will vote to allow slaughter to recommence.

In Dominica's hands - and those of a few other small nations - is the future of the world's great whales. Since the International Whaling Commission voted for a ban on whaling in 1982, some species such as minke and sperm have started recovering. The blue whale remains critically endangered.

In its desperate bid to overturn the moratorium and boost its whaling industry, Japan is using offers of aid and the threat of its withdrawal to get support from the world's poorest nations. Now anti-whaling nations and environmental groups are returning fire.

In Roseau, the capital, it is clear who is winning the battle as you sail into the port. Outside the huge new fisheries complex, the flags of Dominica and Japan are flying. At the base of the flags and near a fleet of Toyota lorries, is a plaque: 'Grant aid by the government of Japan as a token of friendship and co-operation between Japan and the Commonwealth of Dominica.'

Japan has recruited six Caribbean nations, as well as the Solomon Islands in the Pacific, and Guinea in Africa, to vote with it in the International Whaling Commission. Under IWC rules, the votes will be allowed at the commission's July meeting in London.

It will show that Japan has assembled a blocking minority, making it impossible for other countries to pass any further conservation measures, such as the creation of a whale sanctuary in the south Pacific, particularly favored by Australia and New Zealand. With the recruitment of a few more countries, Japan could assemble a simple majority, sufficient to change IWC rules to enable the return of commercial whaling.

Japan refutes the allegations of aid-for-votes, but an Observer investigation has revealed the extent of the practice. It has also revealed that Japan is copying the tactics the anti-whalers employed in the late 1970s, enabling them to impose the moratorium in the first place.

For Atherton Martin, Dominica's past Environment and Fisheries Minister, the meeting last year should have been simple. The Japanese ambassador had flown in from Trinidad to talk about whaling, but insisted on tying the subject to aid. As Martin answered that Dominica's priority was renewable energy, the ambassador stared out of the window, and simply said: 'Fisheries'. As part of the strategy to encourage the commercial exploitation of the sea, Japan's preferred method of aid is building fish processing plants.

The ambassador went to Prime Minister Roosevelt Douglas and repeated the offer. In the run-up to last year's IWC meeting in Adelaide, Japanese officials visited Douglas, and threatened to pull the aid if Dominica didn't vote with Japan. When the Cabinet met, it decided to abstain on the sanctuary. But before the vote was cast, Douglas phoned his representative Lloyd Pascal and instructed him to vote with the Japanese.

Martin resigned as Minister. 'It was such a breach of Cabinet trust. For the last 25 years we have been promoting ourselves as "nature island". It is totally incompatible to be seen to promote whaling,' he said. Two months after the vote, Douglas went on a trip to Tokyo to demand the aid be paid.

The Japanese have offered the three former Prime Ministers of Dominica fisheries complexes within their own constituencies. Many senior politicians and officials are wooed to Japan on all-expense paid trips. Pascal, who is now Fisheries Minister, has been on two trips to Japan in the last year. As well as the fisheries complex in Roseau, Japan has given two $76,000 dollar ambulances. On an impoverished island, the few roads are clogged with top-of-the-range reconditioned Toyotas, Hondas and Nissans.

Japan also pays Dominica's £45,000 annual IWC membership fee. Japan denies it, but a Dominican Minister confirmed: 'Put it like this, we make no allocation for it in our national budget.'

Martin said the Japanese threat was explicit: 'They make it clear, that if you don't vote for them, they will have to reconsider the aid. They use money crudely to buy influence.'

At the IWC meetings, Japan follows through its tactics by chaperoning the island's officials. 'They do not allow them free for a moment - not even at cocktail parties. It's disgusting, it's appalling. It's beyond colonial,' said Martin. During the meetings, the Japanese pass notes to the Caribbean officials, and prompt them to speak.

And it's not just Dominica. A total of six island states now support Japan. Last year Antigua, Dominica, Grenada, St Kitts and Nevis, St Lucia, and St Vincent all voted with Japan and against the UK on every whaling issue. 'Small islands are enormously vulnerable to offers of aid. Through extortion with aid, Japan has been able to get many island nations to join the International Whaling Commission and vote its way,' said Martin.

Kate O'Connell, of the Whale and Dolphin Conservation Society, said: 'In this no-holds-barred effort to buy votes and influence, at both regional and international levels, Japan has exploited not only whales, but the needs of developing nations as well.'

Japan is the world's most generous aid donor, and insists there is no connection with whaling votes. Joji Morishita, deputy director of the Japanese Far Seas Fisheries Division, told The Observer: 'No condition has ever been put on aid. We give aid to countries such as India, Peru and Argentina who are anti-whaling. If we were trying to buy votes, they should all vote for us.'

But the uncomfortable truth for environmental groups is that Japan is simply copying the tactics employed to get the ban on whaling through in the first place. Prior to the crucial vote in 1982, countries such as Egypt, Belize, Monaco, Oman, Costa Rica and Senegal were all signed up to the IWC to swell the anti-whaling vote. Just like the Japanese, environmental groups also paid for the membership fees. Ray Gambell, the secretary of the IWC for 25 years, said: 'A lot of governments who joined immediately before 1982 voted for the moratorium in that year. Many are no longer members.' Pierre Charles, Dominica's present Prime Minister, insists he has had no contact with the Japanese, but didn't deny the link. 'I am not commenting on it. No one can put pressure on me.'

Charles is trying to kick-start a stagnant economy. 'Everyone is going on about whaling, whaling, whaling, but what about the poverty we have here? We are a tiny country trying to survive, and all people want to talk about is what way we vote on a whale sanctuary. We have real people with real poverty here,' he said.

And there's the rub. Those who run the country's infant tourist industry insist they make far more money from getting people to watch whales than selling their votes to let the Japanese kill them. Dominica prides itself as the whale-watching capital of the Caribbean. It is one of the few places in the world where you can sit at a seaside restaurant and watch sperm whales jump out of the water in front of you.

Greenpeace campaigner Audrey Cardwell said: 'When you kill a whale you make money for one day, but if you let it live you can make money from taking people out to watch it three times a day for 50 years.'

The lobbying is now reaching boiling point before July's meeting in London. The Japanese have already sent two delegations to Dominica this year. The Environment Minister of New Zealand will shortly tour Caribbean islands. At least that could give Dominica a choice: it could simply sell its vote to the highest bidder.

1519. Window Frame as a Ground??

Newsgroup: rec.radio.shortwave
Date: 2005-06-17 14:25:17 UTC
From: Lucky <lucky@TheBotStopsHere.com>
Message-ID: <11b5nadqbgcli57@corp.supernews.com>
Source record: 25008

Hi guys!

I live on the 23rd floor of a building so I can't use the earth directly for the ground.
The options in my "radio room" are the ground from the electrical sockets and that's about it.

I've heard I can roll out 10ft of tin foil on the floor as a ground {that's out}, or, use the window frames as a good ground. As far as I can tell, the window frame looks to be aluminum or some sort of alloy.

Have any of you heard of using a window frame as a ground? I think I read it in this NG that someone recommended it and was using it for his ground. I've been using the ground from an electrical outlet.

But being that so many people live in the building that use appliances and other plugged in items all day and night, I sometimes get what seems like bad feedback affecting the receiver.

So what do you think of the window frame for the ground then? I welcome any other options I can use in a room very far from a direct earth ground. The bathroom pipes are all the way across the room separated by a wall. Not easy to get to.

Thanks for any help
Lucky

The ground in your electrical socket is by no means ground radio wise.

Your ground can either be a real low impedance connection to the soil, or
just a counterweight to your antenna, whitch is basically the same. Not many
people are aware what it actually takes to construct a real RF, and not
safety, ground.

> Have any of you heard of using a window frame as a ground? I think I read
it
> in this NG that someone recommended it and was using it for his ground.
I've
> been using the ground from an electrical outlet.
>

You can use anything as long as it is metal. The more the better. But you
should use heavy gauge wire for the connection, as short as possible,
otherwise the effect be be lost in the impedance of the cabling.

> But being that so many people live in the building that use appliances and
> other plugged in items all day and night, I sometimes get what seems like
> bad feedback affecting the receiver.
>

Yeah, I really think you should let mains ground be mains ground and use
something else for RF ground.

> So what do you think of the window frame for the ground then? I welcome
any
> other options I can use in a room very far from a direct earth ground. The

> to get to.
>

If you have carpet on your radio room floor (in order to hide the tin foil), you really should consider laying out tin foil, as much and as long as possible and connect it to the radio/antenna system. The connection between the tin foil and the radio should be no longer than 6'. You may also lay out cables around the perimeter of your room, maybe even around the entire apartment, if you have the possibility.

Consider wether your antenna system actually requires grounding or a counterweight. Remember that any counterweight or artificial ground will function as an antenna and possibly pick up noise.

There is actually only one thing to do: Find some theory and then axperiment to find out what is best at your location.

Best regards
Anders Henriksen, oz7ahr

Based on the newsgroup, I'll assume you're not transmitting, but listening to broadcasts... I'm curious why you are concerned about a 'ground'...?

Neither aluminum window frames nor 23rd floor plumbing pipes (which usually turn to plastic once in the framework of the building) will suffice as a substitute for a good earth ground...

Does your radio require an "earth ground"? If so, try a tuned counterpoise on the ground lug for the bands most listened to... It will probably do the trick (If you need help locating one let me know via email, I have an extra one).

BTW - your email bounces.

Best of luck.

John

1525. Schedule for SAQ Operation Announced

Newsgroup: rec.radio.shortwave
Date: 2005-06-17 19:24:58 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <3hgmc2Fh4079U1@individual.net>
Source record: 25014

This year's scheduled Alexanderson Day VLF operation at SAQ will be on Sunday, 3 July. The historic Alexanderson alternator will again be cranked up on 17.2 kHz at the Grimeton (Sweden) World Heritage site.

Transmissions are scheduled to take place at 0815, 0915, 1215 and 1315 UTC in conventional CW mode. North American listeners will therefore have opportunities to try for the signal both with the path in partial darkness and in full daylight.

Read more about the station and its history at www.alexander.n.se.

1526. NRS/SAQ Longwave Seminar cancelled

Newsgroup: rec.radio.shortwave
Date: 2005-06-17 19:27:12 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <3hgmg9Fgt5oqU1@individual.net>
Source record: 25018

(29)30 June - 2(3) July, 2005, Campus Varberg, Sweden

Dear longwave people,

LW 05 has been cancelled, sorry.

Yesterday May 25th, about a month before the LW 05 seminar, only 11 persons had registered. We know that there are about the same number in the pipeline, but they have been there for weeks or months.

The sponsoring foundations (The Grimeton World Heritage and the Nordic Radio Society) are quite willing to take losses as they promote radio competence activities of this kind. However, it would not be right to gather only 10-20 participants from very few organisations. Another reason, but not the main one, is that the number of keynote speakers have decreased, reasons varying.

In this late stage, after some more weeks of frustation, we have been forced to cancel the seminar. I am very sorry for this; we are unhappy, you are unhappy, I am unhappy, but the decision could not possibly be postponed any further.

We have told the Fregatten hotel that the seminar has been called off, but you yourself will have to cancel the hotel reservation, please. No seminar invoices have been issued.

I take this opportunity to thank those who have supported us. Some of them, i. a. VT Communications and organisations in Varberg, have been extremely helpful. The LW 05 committees and secretariat have made a good work and been a consolation in a difficult time.

I am sorry for the inconvenience and hope to see you anytime, anywhere.

SAQ will be on air during the weekend 2/3 July to celebrate the inauguration of the Grimeton World Heritage. You will find details on the website http://www.alexander.n.se and hope you will be able to receive the message.

Regards,

Carl (Walde)
(ex) LW 05 chair

1527. WWVB Tests Modulation Change

Newsgroup: rec.radio.shortwave
Date: 2005-06-17 19:28:56 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <3hgmjgFgieefU1@individual.net>
Source record: 25016

The nation's LF time and frequency station, WWVB, has been testing a different amplitude shift for transmission of its usual time code signal during May. A 10 dB decrease in signal strength has long been used, but for some parts of the month a 20 dB downward shift has been in effect. FUll-amplitude carrier power remains the same. The latest such test ended on May 26.

The 60 kHz station is operated by the National Institute of Standards and Technology (NIST) near Boulder, Colorado. It underwent antenna and transmitter improvements in the late 1990s to make its signal more available to the wide variety of "atomic clock" timepieces now in use by businesses and consumers all across North America. According to an analysis by K. C. Allen of the National Telecommunication and Information Administration (NTIA), changing the modulation depth could increase the signal-to-noise ratio of clocks using matched filter receivers by the same amount as if transmitter power were increased by a further 2.4 dB.

To keep track of the testing, and to find a short paper on the subject in PDF format, visit the WWVB Outages page at http://tf.nist.gov/stations/wwvboutages.htm.

Well, ok, I am open to examining this.

How old are you? Where did you get your degree? What field are you employed in and, how long have you worked in the field?

Perhaps this guy is lying about his degree, the experiments princeton is working on, the results which have been demonstrated in the labs and universities he names.

If so, give us you data and sources which refutes the evidence he names.

John

Try listening to 5975 at about 2:55 UTC when Delano is firing up
the transmitter for the hour they do the BBC to the Americas.
If it's the same tones, it's part of their startup procedure.
(They don't seem to care if they're stepping all over a transmission
in progress from another site).

A window frame is useless. It's more another antenna,
than a ground. Why do you need a ground? Myself, I
wouldn't use one...Heck, I'm on the ground floor here,
and I don't use one...And I transmit too...You don't
mention the antenna. If you use a complete antenna,
that does not require a ground to complete the antenna,
there is no need for a ground. This is the route I would
take. If your antenna is indoors with you, you probably
won't be able to escape all noise. MK

Hi guys,

Yes I didn't tell you what antenna I've been using. BTW I'm not transmitting at all, just receiving.Due to size restrictions I have one random wire about 30 Ft long and a dipole approx 16 ft total length connected to a 4:1 current balun.

These antennas are on the outside terrace and are fed in thru a window. I had another smaller dipole like 6Ft total connected to the same balun also but have since taken it down.

The seller of the current balun told me I didn't need a ground for it. I didn't know much about dipoles then. But that I should still ground the radio itself. The seller was RFjunkie from Ebay. He seemed to know a lot about them so I grounded the R75, Lowe HF-150 and all of my radios since then.

He said I would need a ground if it was a Voltage balun though but still ground the rigs using the current balun just to be sure it I wanted.

Now, in all the radio manuals I read, and from reading many sites, they all claim one must be grounded and grounded well even if receiving. I think more of the old time users were adamant about grounding your radio for proper use and protection. I read about static building up and the radio having to have some kind of grounding.

So I grounded and many times it seemed to lower the noise floor on some frequencies. So how do you know if you're making a real ground or just another leg of an antenna??

Thank you kindly for all the replies
My e-mail bounces due to all the spam when I have my real one up.
Lucky

Listen Brain Dead One

Whales transmit and you dont even know the frequenies

Right ?

Keith

Talk radio is a great deal more popular-and powerful-than most of us realize. Twenty-two percent of all Americans surveyed say they listen. In some major cities, the number is as high as 40 percent.'
Conservative domination of the talk-radio airwaves is so extensive as to be undisputed, even by the usual suspects. There's not a single well-known liberal talk-show host in the nation and barely a host who does not at least lean well in the direction of the extreme right. The most popular shows are hosted by Rush Limbaugh, G. Gordon Liddy, Oliver North, Sean Hannity, Armstrong Williams, Blanquita Collum, Michael Savage, Neil Boortz, Bob Grant, Bob Dornan, Michael Medved, Michael Reagan, Dr. Laura Schlesinger, Howard Stern, Don Imus, Michael Graham, Ken Hamblin, and Laura Ingraham. Every single one is a movement conservative with politics located at the extreme far-right end of the political spectrum. So far to the right is the general pack of talk-show hosts that, early in the Clinton Administration, G. Gordon Liddy felt empowered to instruct listeners on the best way to assassinate U.S. government officials from the Bureau of Alcohol, Tobacco, and Firearms without receiving much in the way of censure from this community. (His exact words were "Head shots. Head shots.") Once, during a joint C-Span appearance with a right-wing talk-show host and activist, Paul Weyrich, I challenged him to condemn Liddy's statement and he refused, as he put it, to "criticize a brother talk-show host," even for advocating the murder of U.S. government officials. When Bill O'Reilly joined the ranks of radio talk-show hosts in the spring of 2002, he could legitimately claim to be a relative liberal in their midst. Even the Internet gossip Matt Drudge, no stranger to irresponsible right-wing rumor-mongering, says that when he has a story that is "playing among the wing nuts, this tells me it's going to be a huge talk-radio thing."
Indeed, because the radio business has become so centralized in recent years, it is easy for talk-show hosts to spread themselves across the dial with incredible speed. O'Reilly's show debuted in the spring of 2002 with 205 stations, ahead of Michael Medved's 130, Sean Hannity's 150 or so, and Laura Ingraham's nearly 200 markets. But O'Reilly was still way behind Limbaugh's market share, which has gone as high as 650 stations and anywhere from fifteen to twenty million listeners, depending on whose statistics you prefer. Few progressives are ever

given shows, and efforts such as Gary Hart's and Mario Cuomo's haven't amounted to much. The left-wing Texas populist Jim Hightower appeared to be building a strong regional audience back in the mid-1990s, but he was highly critical of Disney and its owner, Michael Eisner. Not long after Disney bought the station, Hightower's show was abruptly canceled. KGO in San Francisco, perhaps alone in the country, boasts two liberal hosts, Bernie Ward and Ray Taliafero, whose shows appear at 10 PM. to 1 A.M. and 1 A.M. to 5 A.M.- not exactly primetime. The Washington Post's Paul Farhi notes, "The drought has gotten so bad that the talk industry is starting to manufacture its own outrage." A few months ago, Talkers magazine reported on the existence of an anonymous creature it termed the 'Lone Liberal,' who was eager to appear on radio talk shows to do battle with its legions of conservative hosts. Its publisher, Michael Harrison, reported that this exotic animal was "hot as a firecracker" on the circuit, averaging eight to nine talk-show bookings a week. In fact, the Lone Liberal was always a ruse, played by Harrison himself. "I'm far more conservative than the Lone Liberal," he explained. "I live in the real world."

Edward Monks, a Eugene, Oregon, attorney, calculates that in his city, conservatives enjoy a 4,000-to-zero hour advantage over liberals on the radio. He wrote in The Register-Guard: "Political opinions expressed on talk radio are approaching the level of uniformity that would normally be achieved only in a totalitarian society.... There is nothing fair, balanced or democratic about it." Monks noted that as recently as 1974, such domination would have been not only inconceivable, but illegal. Back then, the Federal Communications Commission was still demanding "strict adherence to the [1949] Fairness Doctrine as the single most important requirement of operation in the public interest-the sine qua non for grant for renewal of license." This view was ratified by the U.S. Supreme Court in 1969 when it reaffirmed the people's right to a free exchange of opposing views, with roughly equal time given to all sides, if demanded, on the public airwaves. The doctrine was overturned by the Reagan-appointed FCC in 1987. The chairman then, Mark Fowler, made clear his view that "the perception of broadcasters as community trustees should be replaced by a view of broadcasters as marketplace participants." Meanwhile, media companies, together with cigarette and beer companies, working with Republican Senator Bob Packwood, set up the Freedom of Expression Foundation to fight the fairness doctrine in the U.S. Court of Appeals for Washington, D.C. The companies won in a 2-to-1 decision in which the two judges ruling in their favor happened to be Robert Bork and Antonin Scalia. President Reagan vetoed attempts by Congress to reinstate the doctrine, and the net result has been the complete far right domination of the nation's airwaves, owing entirely to what analysts call "marketplace realities."

The amazing career of Rush Limbaugh owes a great deal to that moment in history. It is testament to just how well success succeeds in the U.S. media, regardless of accuracy, fairness, or even common sense. Limbaugh's legendary lies and mythological meanderings have been rewarded not only with legions of listeners, but also with incredible riches-a contract said to be worth $250 million over seven years. It

has also won him the respect of the media establishment. Limbaugh, for instance, has been treated to laudatory coverage in Time and Newsweek and was invited by host Tim Russert of Meet the Press to be a guest commentator on what is certainly the most influential political program on television. And yet Limbaugh is, to put it bluntly, deranged. Fairness and Accuracy in Reporting has published an entire book of Rushisms that have turned out to be false, unsubstantiated, or just plain wacko.
p74
Listening to Limbaugh, the idea that he enjoys genuine power in the political life of the nation leaves you shaking your head in awe and amazement. But it is impossible to ignore. Limbaugh's radio audience is the largest any program on the medium has enjoyed since the advent of television. President George H. W. Bush invited him for a White House sleepover, as well as to be his honored guest at his State of the Union address, seated next to Barbara Bush, in a demonstration of fealty and respect. Shortly thereafter, in 1993, National Review termed him "the leader of the opposition." William Bennett averred that Limbaugh "may be the most consequential person in political life at the moment." When the Republicans took the House back in 1994 in a profound and humiliating rebuke to President Clinton, Limbaugh's broadcast received a lion's share of the credit. Washington Post media reporter Howard Kurtz even defended nonsense like the above as "policy oriented." As Newt Gingrich's former press secretary Tony Blankley noted,
After Newt, Rush was the single most important person in securing a Republican majority in the House of Representatives after 40 years of Democratic Party rule. Rush's powerful voice was the indispensable factor, not only in winning in 1994, but in holding the House for the next three election cycles. At a time when almost the entire establishment media ignored or distorted our message of renewal, Rush carried (and of en improved) the message to the heartland. And where Rush led the other voices of talk radio followed.
This influence cannot be said to have diminished markedly during the past decade even after Limbaugh lost his most-favored targets when the Clintons left the White House. Much to his chagrin as a McCain supporter, William Kristol credits Limbaugh with rallying conservatives behind Bush during the 2000 presidential primaries. "He helped make it the orthodox conservative position that McCain was utterly unacceptable and also that Bush was fine, neither of which were intuitively obvious if you're a conservative," Kristol said. McCain's South Carolina political adviser, Richard M. Quinn, concurred, adding that the Arizona senator never recovered, in his opinion, from Limbaugh's repeated descriptions of the conservative Republican as a "liberal" in an extremely conservative state. "I never polled on the impact of Limbaugh," Quinn told the New York Times. "But anecdotally, I heard it all the time. You would hear on the street repetition of what Rush was saying about McCain. There was a general sense in the campaign that Limbaugh was definitely hurting us. Blankley put it bluntly: "Given the closeness of the election, but for Rush Limbaugh's broadcasts, we would now be led by President Al Gore."

p75
While the Net is economically dominated by a tiny number of large corporations, just like television and radio, the information that appears on it is not. Standards for established news services with a net presence have by and large been maintained; however, the true story of political news on the Net is with the small, right-wing sites that use the Web almost as effectively as they use talk radio. Web sites like the Drudge Report, NewsMax.com, WorldNetDaily.com, FreeRepublic.com, Townhall.com, Lucianne.com, JewishWorldReview.com, and National Review Online boast regular readers in the millions. What's more, they are dedicated readers and in many cases, like the Limbaugh audience, so far to the right as to tend toward outer space. For instance, Joseph Farah, a columnist for Worldnet, warned his readers in October 2002, "The Democrats-far too many of them-are evil, pure and simple. They have no redeeming social value. They are outright traitors themselves or apologists for treasonous behavior. They are enemies of the American people and the American way of life." On Lucianne.com, a number of posters celebrated the plane crash that killed Paul Wellstone, his wife, and daughter, in late October 2002 and expressed the hope that Ted Kennedy would meet a similar fate. Even further out in the right wing ozonosphere, is the site FreeRepublic.com. While posts terming Gore a "traitor" are commonplace, alongside the addresses and phone numbers of allegedly liberal politicians and judges, a UPI story unearthed one user who sympathized with Timothy McVeigh and another who called him a "modern-day Paul Revere." According to figures published in the New York Times, the average "Freeper" Web visit lasts an amazing five hours and fourteen minutes. It's not a hobby for these people, it's a life.
p77
Undoubtedly the biggest star of Net journalism-its Rush Limbaugh if you will-is the self-styled Walter Winchell-in-a-fedora, Matt Drudge, who claims more than 100 million visits a month to his bare-bones, next-to-no-graphics site. Like Limbaugh, Drudge professes nothing but contempt for the mainstream news establishment. Viewed, he crows, "daily not only by presidents and world leaders, CEOs, anchormen and top media editors," Drudge claims to be "powered" only by endless curiosity and a love of freedom. Of course with numbers like his, the media he disdains cannot help but celebrate him. Drudge was named one of Newsweek's new media stars and Peoples Twenty-Five Most Intriguing People. The American Journalism Review ran a cover story entitled, "Journalism in the Era of Drudge and Flynt," and the Columbia Journalism Review cited his outing of the Monica Lewinsky affair in 1998 as one of the ten key dates in the media history of the twentieth century.
Originally an amateur Hollywood gossip who picked through garbage cans to get his goods, Drudge became an overnight phenomenon as a kind of bulletin board for unsubstantiated political rumor and right-wing character attacks. Drudge describes his work habit as sitting in his apartment "petting the cat and watching the wires- that's all I do." But he also receives a great deal of e-mail. One of his favorite

tactics is to steal a working journalist's story-leaked to him internally-and post its still-in the-works details on his Web site before the author can publish them. His big moment in media history consisted of little more than posting the purloined work of Newsweek's Michael Isikoff, while the magazine's editors sought further confirmation before publishing it. Drudge did it again when NBC News was trying to decide how to handle an unsubstantiated twenty-one-year-old accusation of sexual assault against President Clinton. Drudge rarely bothers to independently verify his stories, so he often appears prescient-when, in fact, he is simply overlooking what is widely understood to be the essence of journalism. Tim Russert learned this to his chagrin when Drudge posted three stories on his site about the Buffalo-born newsman's considering a run for governor of New York. "All three stories-they are just plain dead wrong," Russert complained. "And he never called me about them, never." The only surprising thing here is Russert's surprise.

Drudge is a self-described misfit with few social graces, and modesty is certainly not one of them. Drudge calls his apartment "the most dangerous newsroom in America." "If I'm not interesting, the world's not interesting," he writes. "And if I'm boring, you're boring." Despite his disdain for traditional news ethics, and a lack of any discernible effort in the areas of reporting or punditry, Drudge's impact is huge. He counts his hits in the millions and can single-handedly drive hundreds of thousands-sometimes millions-of readers to any story he posts on the Web. When he purloined and posted Isikoff's Lewinsky scoop, he jump-started a political meltdown that led to the only impeachment of an elected president in American history. When he then went on to post the story of Clinton's alleged mulatto "love child," he made a national fool of himself, but hurt no one, save those gullible and irresponsible media outlets-most notably Rupert Murdoch's New York Post and Sun Myung Moon's Washington Times-who trusted him and reprinted it. But when he posted a malicious lie about Clinton adviser and ex- journalist Sidney Blumenthal having "a spousal abuse past that has been effectively covered up," replete with "court records of Blumenthal's violence against his wife," Drudge attacked an innocent man. But even this did not seem to hurt Drudge's reputation. Much of the media preferred Drudge to Blumenthal, whom many reporters resented for personal and professional reasons. In none of these cases did Drudge profess regret, though he did retract his false accusation against Blumenthal before the latter launched a libel suit against him. As for the Clinton "love child" concoction, Drudge bragged, "I'd do it again."

During the Lewinsky crisis, Drudge became so big the Internet could no longer contain him. He was given his own television program on Fox, where he was free to spout unconfirmed rumors with fellow conservative conspiracy nuts until he was informed by management that he would not be allowed to show a National Enquirer photo of a tiny hand emerging from the womb during a spina bifida operation on the fetus. Drudge wanted to use the photo as part of his campaign against legal abortion. When even the Fox executives found this idea not only repulsive but

misleading, Drudge quit the show. Roger Ailes, whose brilliant idea it had been to hire Drudge after watching him spout baseless conspiracy theories on Russert's program, complained, "He wants to apply Internet standards, which are nonexistent, to journalism, and journalism has real standards. It can't work that way." It should come as no surprise to anyone that Drudge is also a successful force in radio, with a two-hour Sunday evening show hosted by ABC that is heard in all fifty states and literally hundreds of major markets.

Drudge also published a book-well, sort of a book. The tome was "written" with the assistance of the late Julia Phillips. Of the 247 pages contained in The Drudge Manifesto, the reader is treated to forty blank pages; thirty-one pages filled with fan mail; twenty-four pages of old Drudge Reports; a thirteen-page Q& A from Drudge's National Press Club speech; ten pages of titles and the like; six pages of quotes from various personalities like Ms. Lewinsky and Madonna; four pages of a chat transcript; and, well, a great deal more filler. That leaves the reader with just 112 pages or barely 45 percent of actual book. (And even nine of these are Drudge poetry.

But even with all the strikes any journalist could imagine and then some against him, Drudge still gets results for his combination of nasty innuendo and right-wing politics, often by planting items that would be picked up by allegedly respectable journalists in national newspapers. In the Arkansas Senate race of 2002, the Associated Press reported that Democrat Mark Pryor found himself forced to respond "to an item on the Drudge Report Web site of Internet gossip Matt Drudge" in a lightly sourced story that alleged the hiring of an illegal immigrant for housekeeping duties. (In fact the woman in question later signed a sworn affidavit testifying to the fact that she was a legal U.S. resident and had been paid to lie.)37 In May of the same year, for example, Drudge carried a report that ex-conservative journalist David Brock, whose Blinded by the Right embarrassed virtually the entire movement, had suffered a "breakdown" while writing the book and had to be hospitalized-something Brock reluctantly confirmed when contacted. Drudge did not mention on his site that he had considerable reason to hold a grudge against Brock, who had published in his book that he received an e-mail from the Internet snoop that said he wished the two could be "fuck buddies." (Brock is an open homosexual. Drudge is not.) As the gay journalist Michelangelo Signorile wrote, "You'd think that no respectable journalist would further the new Drudge sludge on Brock, at least not without a fuller explanation that included Drudge's possible motives." But in fact the Washington Post did publish it-or at least the parts Drudge wanted published, leaving out any discussion of his motives-and adding quotes from three conservatives who continued the character assassination of Brock that Drudge initiated. Nowhere in the Post item did the newspaper attempt to establish any journalistic relevance to the item, which is rather amazing when you consider the fact that its former publisher, the late Philip Graham, father of the current head of the Post Company, Donald Graham, was himself hospitalized for mental illness, before taking his own life. (Making this story even stranger, the Post's Howard Kuru reported in 1999 that

Drudge's own mother had been hospitalized for schizophrenia.)
Just before Election Day 2002, Drudge and Limbaugh combined, together with Brit Hume of Fox News and the Wall Street Journal editorial page, to effect a smear against the Democratic Socialists of America (DSA) and, by extension, the late Senator Wellstone's re-election campaign. This episode too had all the trademarks of the conservative echo-chamber effect, including unproven innuendo, inaccuracy, repeated cavalier use of unchecked facts, all in the service of a clear political/ideological goal. As reported by Bryan Keefer of Spinsanity, DSA posted a pop-up advertisement on its site on October 9 seeking contributions to pay the cost of bringing young people to Minnesota, where same-day registration is legal, to help register Wellstone voters in what was certain to be a dose race. Shortly after the advertisement appeared, however, a local conservative organization sent out a press release in which it manipulated the original text to make it appear that DSA was planning to transport people not to register Minnesotans to vote, but to vote themselves, with the hopes of stealing the election.
Drudge saw the story in a local paper and headlined his site's line: "Socialists Sending People to MN to Illegally Vote for Wellstone." This apparently sent Limbaugh into action, as the radio host melodramatically informed his listeners, "DSA has been caught." With his typical respect for accuracy, Rush added, "You can go in there and register and vote and split the same day, you can go home, you don't even have to spend the night in Minnesota and freeze if you don't want to, you can go in there and vote and leave." Next up was Fox News's Brit Hume, who announced to that network's viewers, "The Democratic Socialists of America, which bill themselves as the largest socialist organization in the country, is raising tax-deductible money to send people to the state of Minnesota, where they can take advantage of same-day registration to vote for the liberal incumbent Paul Wellstone." These reports apparently inspired the Journal editors who-again, contrary to all available evidence-insisted, "The Democratic Socialists of America recently posted an ad on their Web site inviting tax-deductible contributions to 'bring young people to Minnesota' to vote in the close U.S. Senate race there." As Keefer noted, while the loosely worded ad did originally raise questions about whether tax-deductible funds were being properly used for issue advocacy-and hence was rewritten for clarifying purposes-never in any of its texts did it even imply, much less encourage, anyone but Minnesotans to pick their own senator. It is perfectly legal in that state to encourage people to vote and even to take them to the polls.
Of course, Wellstone's death made the effects of this story moot, but cases like the above demonstrate just how profoundly journalistic times are a-changing. And the result of these changes is yet another victory for conservatives and scandalmongers-and in Drudge and Limbaugh's cases, both at once-who seek to poison our political discourse with a combination of character assassination, ideological invective, and unverified misinformation. The resulting loss of credibility for phantom SCLM bespeaks not only the profession's misfortune, but

democracy's as well.

Hi

Again what about built up static? Where does it go then? I usually switch between my 2 antennas to see what brings the frequency in better, the random wire or the dipole. So I don't stay with one fixed antenna all the time. A ground would still not be needed then?

So I take it most of you not transmitting are not grounded?

Lucky

Do you need an earth ground, or AC electric ground, or just
a big Faraday shield? Even your concrete floor is an earth
ground - depending on electrical characteristics that were not
provided. Without mentioning frequencies or purpose of the
'ground', then all answers will only be speculation based upon
personal assumptions. What are you trying to accomplish?
Noise reduction? Better signal reception? Human safety? All
may be useful or useless reasons for grounding.

Finally got my "31". Think it is a great addition to my Degen 1102. I noticed something interesting, though, when plugging it into the 1102, without even turning on the amp I get a huge signal increse if I leave the jack one notch from being fully plugged in.

I've tried it on all bands and it has the same results.

Anyone else notice this? I'm wondering if it is only an 1102 thing.

I see you missed the gross exaggeration and obvious satire. I find your willingness to lie in order to get a false conviction troubling though. This is the attitude that starts overseas wars on oil rich countries using false pretexts. Remember the bit about bearing false witness against your neighbour?

Perhaps you missed the irony of your own statement. You would lie because I allegedly have no morals. That is funny, in a very twisted sort of way.

Hiya...

I'm ashamed to ask this remedial question being that I have enjoyed so may WBCQ shows over the years.

I know Weiner of WBCQ fame was a pirate at one time, but I dont know any detailed history. What exactly was he doing ??? Operating from a boat off shore until he got busted ??? Could anyone give me some basic info on his pirate days ???? What sort of content did he broadcast ???

Thanx in advance !!!

Another source is one of the pirate radio books that
Andrew Yoder wrote as well.

Alan, along with a bunch of others, thought they'd
found a loophole in regulations allowing them to
broadcast offshore from a foreign ship in international
waters. So, Radio Newyork International was born.
Alas for Alan and company, the feds raided the
ship and their little experiment didn't work out.

As for the programming, think Pacifica. Counterculture
stuff.

Again what about built up static?

Static is rf just like any other signal...When you
listen to lightning crashes, you are listening to
lightning "radio". Now, if you actually have static
build up on the antenna, IE from dry weather, etc,
you can always add a resister, etc to bleed it off.
But hear in TX, I never bother. It's not an issue here.

Where does it go then?

Where does any other signal go?

I usually switch
between my 2 antennas to see what brings the frequency in better, the
random
wire or the dipole. So I don't stay with one fixed antenna all the
time. A
ground would still not be needed then?

No.

So I take it most of you not transmitting are not grounded?

Well, many do I'm sure, but I don't. I don't use an rf ground to
my shack at all. I don't need one. You have basically three
types of grounds. The safety ground, the rf ground for the antenna,
and the lightning protection ground. Many times the last two
are combined. Your power line ground is the "safety ground".
You only need a safety ground in the shack, if your radio, etc
requires one. If it does require one, it usually will have a third
grounding pin on the plug. Many radios do not need a safety
ground. Actually these days, *most* radios do not require a
safety ground. IE: look at a TV...Do you see a ground pin on the
plug? Thats what I thought....
Then you have the RF ground for the antenna. Normally, it should
be at or under the antenna, *if* the antenna requires it to complete
the antenna. IE: vertical monopoles, etc... If you use a random wire,
and ground the shield, it's best to do that outside at the base of
the antenna. This assumes a coax feed... On the 24th floor,
you will never be able to get a decent RF ground that won't act
as an antenna, so thats really your only option. Otherwise, if just
a random wire to the radio, I wouldn't bother.
If you use a dipole, or other antenna that is complete in itself,
there is absolutely no need for an rf ground at the antenna, or
the radio. Nada, none, zilch. This is the way I operate. All my

antennas are complete, or have rf grounds under them.
The lightning ground is purely to direct the strike to ground, and
maybe protect the radio, if you want to go that far. There are
plenty of threads covering that hornets nest, so you can research
that on your own.
The lightning ground, I *do* use...But...It's all outside...Has nothing
to do with my shack.
Grounding is pretty complicated, per the reason/s, and is probably
one of the most "wives tales" loaded topics you can find.
Inside a 24 th floor highrise, you don't need to worry about static
buildup...If you did, probably half the electronics stuff in the place
would be toast by now...As far as listening, and static noise, there
may
well be nothing you can do about it, other than using a coax fed
antenna that is outside, and away from the noise source, assuming
that source is inside with you.

Hi Ryan.

You hit that right on the head. One of the other posters stated the window
frame would make an antenna NOT a ground.
So I decided to try it as one. I connected the wire to the antenna terminal
on the R75 from the ground.

I couldn't believe it!
What a good antenna it made. Most of the time the S-Meter was peaking higher
with it then the dipole. Even though the noise floor was increased in some
cases, the signal was much more loud, clear and audible.

In a couple cases I needed to turn on the pre amp to hear the signal with the dipole but with the window frame antenna it didn't need it at all! Yes I realize that certain size dipoles will limit some frequencies it's not perfected for, but this setup brought in better signals across the board most of the time. Of course there was few frequencies it just was terrible at.

Now if you use the R75's options, you can remove most of that extra noise. I'd rather have a audible signal that I can listen to with some noise then one so weak you can't interpret what is being said.

So I would say this ground experimentation exposed a pretty decent optional antenna! Being up so high makes that frame a real signal magnet. What a great find for someone who can't put up outside antennas or perhaps would get better results then what they are using now.

So what kind of antenna do you think this rectangle aluminum frame makes? What could it be compared to?

As for the electrical ground, I realize it's more of a "safety" ground then a RF ground as one poster pointed out. So by using the electrical sockets ground, what am I actually grounding? The radio itself, the antennas or both? I'm figuring just the radio from lightning strikes or static?

Thanks
Lucky

Hi MK

You gave me a good explanation of how grounding can be classified. What a great post for me, thank you very much. It even answered the questions later in the post I had in my mind from reading the first parts!

I always thought a ground was a ground and it had basically only one function:
To protect the radio from damage, lower the noise floor and making a complete "radio circuit"

So why do these radio manufacturers put grounds on their receivers even when the plug is not 3 prong?

I feel better now. I see grounding is not such a 'must have' item. I use a surge protector and it's fused and grounded already since it's 3 prong. I have all my radio gear and even my Astron hooked up to it. So I am grounded for safety already. Plus I have all wires fused too.

The dipole and current balun doesn't need a ground, and the random wire is not coax anymore { I couldn't close my window} so grounding that is out too. So since I'm not transmitting it looks like I'm covered.

Your post helped me understand all this.

Thanks
Lucky

It would be some strange sort of untuned loop antenna. Actually you could take a look at http://groups.yahoo.com/group/Shortwave-SWL-Antenna/ - a guy from Finland (Greg W) has made use of a window frame as well. He made a small (6") pickup loop from coax cable and uses this with excellent results from 9 to 17 MHz. He has uploaded a video showing the difference between a random wire and his "loop" - impressive.

Hi Tom

I was trying to do the right thing according to manuals and some articles I read, plus lower the noise floor. I always thought this unwanted "noise, static, clicks, lightning and other garbage" needed somewhere to go. That you wanted to provide a path for it so it didn't find it's way to the radios speaker and then your ears.

I bascially do BCB during the day, some Hams, shortwave programs during the early night and Hams again later at night.

I live in Florida and like listening to the Southern Hams late at night.
Some stay on very late.

I'm bascially talk programs during the day and all over the night
frequencies at night.
Whatever catches my interest. I even listen to the Liberty net every so
often for fun.

Thanks
Lucky

Hi Anders

Wow great idea! Yes I can actually see that working very well. In fact I'm going to try it. I have a small pickup loop already made too. Thanks a lot Anders. I'm going to check out his video. Funny how this original ground is turning out to be something I never expected.

Thank you
Lucky

Anders,

I just saw the two videos. Now that is very impressive. It's not even tuned either from what I can see. My pickup loop is like 6" in length also. Fun stuff for sure :)

Lucky,

You are correct. The frame isn't tuned. I'm wondering if it's possible to tune the pickup loop instead. Some sort of tuning would surely be beneficial, but cutting the window frame is probably not the answer ;-)

Greg has made some nice pictures and explaining text as well, so if you have access to a soldering iron, it's fairly easy to build his loop.

I'm certainly going to give it a try next week or so, when my exams are over.

Lucky,
The loop in the picture is an untuned shieded loop. Do a google search on shielded loop antenna or magnetic loop antenna.

There are a lot of benefits to a loop antenna. Low noise is the best feature.

The simplest loop can be made from a piece of coax and the connector to match the one on your radio.

You can start with an untuned antenna which is low cost and simple. If you want to put more effort into it, try a tuned loop.

Have fun,

craigm

Anders,

I think I once tuned the pickup loop and it worked to a degree. Not as well as tuning the main loop but it gives you a little added edge. I have an MFJ-959B model and it's a great little tuner. I like it. It's great for older radios like the Yaseu Frg-7 and even the Lowe HF-150.

I wonder if Greg W tried hanging the pickup loop from the top and/or side of the window frame. He may be suprised by the unexpected. I know I have with radio experimentations. What doesn't work for almost everyone else might work the best for you. What shouldn't work does etc.

Is his a shielded loop? Looks like one but he has the gap hidden by black tape I think. Take a good look at the still picture he put up in the files section. Mine is shielded.

Lucky

MEDIA
Big Bird Gets Plucked

For more than two decades, "political conservatives have been targeting PBS ... with a stream of public relations campaigns designed to rein in public broadcasting's independence and cut into its public and congressional support." Both the Nixon and Reagan administrations attacked public broadcasting and, as speaker of the House, Newt Gingrich tried to end its funding. E-mail petitions -- with "Save Big Bird!" subject lines -- that implored you to save public broadcasting from destruction used to be the stuff of urban legend. But leave it to conservatives to ultimately succeed in turning fiction into reality. Right-wingers are taking over the board of the Corporation for Public Broadcasting (CPB), the agency intended to provide a buffer between independent public broadcast networks and the partisan government. And they are working overtime to put a conservative slant on programming, a move that completely undermines the non-interference mandate of the 1967 Public Broadcasting Act. This week right-wingers in the House voted to cut all federal funding for public broadcasting within the next two years. Unless the public demands respect for independent and public broadcasting, soon nobody will be able to tell you how to get to Sesame Street. Write Congress and demand that they save PBS from partisan operatives.

TOMLINSON'S PUBLIC CRONIES: Staunchly conservative CPB Chairman Kenneth Tomlinson "secretly drafted a White House official to formulate 'guiding principles' for the appointment of two ombudsmen to monitor and critique all public broadcasting content." Then, against the suggestion of top public broadcasting officials, Tomlinson hired the ombudsmen. Both have very clear ties back to conservatives and even the Organization of News Ombudsmen, "which represents nearly a hundred print and broadcast ombudsmen from around the world," doesn't trust their independence. The organization rebuffed the CPB appointees' attempts to become full members of the group. Tomlinson is also working to get the former co-chairman of the Republican National Committee into the chief executive position at CPB. Additionally, Tomlinson wants to hire the conservative "who pioneered the myth of the 'liberal media'" to review NPR coverage.

TOMLINSON'S NOT SO PUBLIC CRONIES: That's the stuff Tomlinson is doing on the surface. Without informing the rest of the board, Tomlinson secretly doled out thousands of dollars to conservative lobbyists. The CPB's inspector general is now investigating these Tomlinson handouts, as well as other undisclosed money he gave to "a man in Indiana who provided him with reports about the political leanings of guests" invited on the show of media legend Bill Moyers. The consultant "[tracked] 'anti-Bush' and 'anti-Tom DeLay' comments by the guests." CPB was "created by Congress to serve as a 'heat shield' to protect public broadcasting from political interference ... Tomlinson is turning it into a right-wing blowtorch."

THE RIGHT WING'S DARLING: One of the lobbyists secretly hired by Tomlinson is Brian Darling. This is the same Brian Darling who "served as a top aide to Senator Mel Martinez (R-FL) but resigned after the disclosure that he had written a memorandum describing how to exploit politically the life-support case of Terri Schiavo." Initially, Martinez denied any association with the memo and Republicans "[accused] Democrats of concocting the document as a dirty trick." In the document, which Martinez handed over to another senator and described as "talking points -- something that we're working on here," Darling calls the Schiavo case "a great political issue" that would rouse the pro-life base.

THE POLL NUMBERS THE RIGHT DOESN'T WANT YOU TO SEE: Publicly, Tomlinson continues to maintain that he is "concerned about perceptions that not all parts of the political spectrum are reflected on public broadcasting." What Tomlinson isn't talking about are his own poll numbers, which say the exact opposite. Earlier this year, the CPB hired the right-leaning polling firm Tarrance Group to investigate these political bias claims. After conducting two "National Public Opinions," pollsters found 80 percent of Americans saw PBS programming as "fair and balanced" -- and they didn't mean like Fox News -- while 90 percent believed that PBS "provides high quality programming." Furthermore, a majority of respondents called PBS "more trustworthy than CNN, Fox News Channel and other mainstream news outlets." Tomlinson "buried [the results] in an annual report to Congress" without releasing them to the press or even sharing them with PBS and NPR.

HOUSE CALLS FOR ELMO'S HEAD: Under a bill approved by the House Appropriations Commitee, federal funding of CPB, which "channels funding to the Public Broadcasting Service, National Public Radio and individual public radio and TV stations, would be slashed by $100 million. By the year 2008, all federal money would be gone. A senior official at National Public Radio "blamed" the funding cuts "on Tomlinson's "'irresponsible' charges of political bias." The accusation is understandable; the "political bias" claim was the same obfuscation used back when Gingrich tried to gut CPB in 1994. And though CPB is "supposed to encourage the growth of public broadcasting," its own chairman seems to have no problem with the House's decision. Tomlinson "rejected a proposed statement by senior officials at the corporation denouncing [the] vote."

By Thomas Crampton
International Herald Tribune
18 June 2005
Paris

The days of stringing a wire across the room to hear a shortwave radio broadcast from the other side of world ended long ago.

Podcasting, the creation of audio recordings that can be easily downloaded from the Internet, has made it possible for just about anyone with a computer to reach a global audience with high-quality digital sound. While the recordings are stored in the MP3 or AAC formats popularized by the runaway success of Apple Computer's iPod, they can be heard using devices made by numerous manufacturers.

In the United States, where the tools for podcasting were honed in the anti-establishment atmosphere of Silicon Valley, this freedom prompted a flourishing of independent radio broadcasters.

Similar experiences have occurred elsewhere around the world, with even Switzerland now boasting at least one "indie" podcaster.

But major national broadcasters across Europe have taken podcasting to heart in way that has not happened so quickly in the United States.

"The momentum behind podcasting in the United States came out of a protest-style culture that rejects commercial radio," said Michael Bull, a lecturer in media and culture at the University of Sussex and author of "Sounding out the City: Personal Stereos and the Management of Everyday Life." "In Europe, the taxpayer-supported broadcasters see podcasting as an extension of their duty to serve the public."

The result is that, as with shortwave radio in a previous era, listeners can hone language skills, catch up with news from home or get a taste of foreign culture from a portable digital music player.

Some international podcasts can be found at the Web sites www.podcastalley.com and www.podcast.net. With the notable exception of French-speaking Quebec, where the term "baladodiffusion" was invented to avoid sounding too English, the word podcasting seems to have crossed into most languages unaltered.

Among the highest-profile examples of Europe's institutional investment in podcasting is the BBC, which began a trial podcast of 20 programs last month. Up-to-date statistics are not yet available, but an earlier experiment with a very similar MP3 downloadable programming format was highly successful.

The program "In Our Time," an intellectual discussion led by the broadcaster Melvyn Bragg, built an Internet following of up to 25,000 people downloading the program each week.

"It is still too early to measure results, but we are incredibly excited about what we have on offer," said Chris Kimber, head of interactive radio at the BBC. "Podcasting is fundamentally different from an Internet stream, since listeners can carry the program with them and listen when they are ready."

Podcasting itself may not be the final form of radio delivery, but it is a step toward the goal of the BBC. "We are trying to ensure that radio survives in the digital age," Kimber said. "We don't want to be the only media that is not digital."

News broadcasts are not the only sort of shows available from European broadcasters.

Arteradio.com, a site run by Arte, a cultural broadcaster supported by the French and German governments, offers a wide variety of broadcasts in French, English and German. Items on offer range from a novelty song that remixes statements by Jacques Chirac to a disco beat, to a recording of a cockfight in Madagascar.

Denmark's taxpayer-supported national broadcaster, Denmark Radio, is also preparing for radio's digital future. "Within the next week or so, we will go live with podcasts for about 50 programs, but that is just the beginning," said Ole Molgaard, head of development for Denmark Radio. "Radio is dead in its current form, but we see a great future for the medium."

The broadcaster, which has only four FM channels, offers 25 channels on the Internet. "We want to offer people radio with a choice about where, when and how they listen," Molgaard said.

Denmark Radio's podcasts will be delivered free to all users in Danish, but copyright limitations have thus far prevented the use of music in podcasts, as with the BBC. "Podcasting is the direction radio will go, the record companies just need to catch up," Molgaard said.

Beyond state-supported broadcasters, the new technology has opened up room for podcasters like Tanja Danker, a Zurich-based singer who has sung back-up vocals for Celine Dion.

Her podcasts, recorded weekly on her iRiver MP3 player, run for up to 40 minutes on the Web site www.swisspodcast.ch and include music as well as interviews with actors, musicians and artists.

The tough part for developing an audience, Danker said, is the language of her podcast: The Swiss-German dialect.

But that's the point of her podcast, she said: "I want to reach our community in Switzerland in a way that these many podcasts from the United States cannot."

Am I the only one who sees this as a major leap backwards?

What was once a real-time turn-on,tune-in, bliss-out deal now involves
booting up a computer, finding a website, downloading a file,
transferring it to a player, then listening to it.

The wearable version of this will be out in a couple weeks. Picks up
WRN (dozens of International Broadcasters) and 119 other channels:

Mike;

I reckon that SW does have a future, particularly for the 3rd World. Additionally, who's to say that new technologies don't implode with viruses or terrorism, wrecking computerised systems? Modern TV and radio (FM, digital) provide sanitised pap. Like other group members have stated; SW is a medium for the truth and objectivity.

Sure... the gain of the multicoupler is only there to make up for the loss of
the multicoupler itself.

No John.

Please Help

..
The whale killers are Japan, Norway, Iceland, and a bunch of small, puppet nations in the Caribbean and the South Pacific whose votes have been purchased by Japan. Japan has even enlisted landlocked Mongolia to join the IWC to vote for killing whales.

The strongest voices in defense of the whale are Australia and New Zealand. But other nations are also speaking up in defiance of the incredible arrogance of Japan.

This year, Japan has given the finger to international public opinion confident that they have finally bought enough votes to overturn the 1986 moratorium on commercial whaling.

Last month, Yoshimasa Hayashi, a member of Japan's House of Councillors, warned that it would break the 20-year moratorium on commercial whaling if international regulators failed to establish a whaling management system by the end of June.

In addition , Hayashi said Japan will double its annual quota of research whaling
from the current more than 700, increasing both the number of species hunted and the hunting area. And for the first time in two decades, Japan will target the endangered humpback and fin species.

This announcement has been met with strong opposition from China, Germany, Britain, Australia, and New Zealand.

"Once a country starts commercial whaling with advanced hunting techniques, some species will probably become extinct in a short period of time," said Professor Zhu Qian, a whale expert with Shandong University in China. ""This endangered mammal is highly migratory. It belongs to the world, not any single country."

Meng Xianlin, a senior official with the Endangered Species Import and Export Management Office under the Chinese Ministry of Forestry, said, "China is a non-whaling country. We don't want to see countries violating the whaling commission's moratorium under the guise of 'scientific research'."

"I personally think the Chinese government will consider the academic voices this time and vote against the new proposal," said Meng Zhibin, a researcher from the Endangered Species Scientific Commission.

"'Research whaling' is simply an excuse," he said. "How come such a large number of whales are needed for research?"

If they vote against the proposal, this will mark a shift for China, a country that has voted with Japan in past meetings.

British Fisheries minister, Ben Bradshaw, told the British media that Britain was totally opposed to Japan's whaling policy. "If Japan goes ahead with this, it will be sticking two fingers up at world opinion on the eve of the annual international whaling conference. "There is no excuse for scientific whaling, you can carry out the scientific research you need to on whales that are alive and the UK government position is that the only whaling that should be tolerated is limited whaling carried out by small indigenous populations," he said. "We just see it as a cover for economic whaling. It is very worrying."

The Japanese have been aggressively recruiting new members to the whaling commission using financial incentives which means the pro-whale nations may have lost the overall majority on the commission.

Speaking for the South African government Horst Kleinschmidt said, "The South African position is completely opposed to Japan's position and we will make that very clear."

Although the United States is officially opposed to whaling, there is a degree of mistrust with the USA from many IWC members. One source said that the United States did not want to cause any trade friction with Japan.

What all this means is that the future of the moratorium is uncertain. It could be overturned next week or it could be continued. The problem is, that if the moratorium is upheld, Japan intends to kill whales anywhere and anytime it wishes. And Japan will get away with it because IWC regulations have no enforcement agency to back up the rules and other nations are reluctant to impose economic sanctions on such a powerful nation.

So moratorium or no moratorium, the Japanese have already targeted 1400 minke whales, 80 humpbacks and 80 fin whales in the Antarctic Whale Sanctuary in December 2005 and January 2006.

However, there is one unofficial enforcement agency for IWC regulations and that is Sea Shepherd Conservation Society.

Stopping the Japanese whaling fleet is the priority campaign for the Sea Shepherd for this year. We are preparing our flagship the Farley Mowat and we will be crossing the Pacific to Australia for final preparations to head down to the Antarctic Whale Sanctuary.

Sea Shepherd is not in Korea attending the IWC meetings because Sea Shepherd is the only non-governmental organization that is banned from attending the IWC meetings. The reason for this, is that Sea Shepherd is the only organization that has enforced the regulations of the IWC,

and consequently, was banned for sinking two illegal Icelandic whaling ships in 1986.

To enable the Farley Mowat to reach the Japanese fleet, Sea Shepherd is seeking funding for fuel, supplies, preparations, equipment, and for acquiring a helicopter to enable us to locate the Japanese fleet.

Captain Paul Watson said, "If we get the financial support to acquire an aircraft and to fuel our ship we will find them and we will stop them from killing whales."

Thanks Paul

1584. Re: Window Frame as a Ground??

Newsgroup: rec.radio.shortwave
Date: 2005-06-18 21:44:20 UTC
From: w_tom <w_tom1@hotmail.com>
Message-ID: <42B495B4.B4906A8E@hotmail.com>
Source record: 25073

Take a long wire antenna. Ground the far end. Notice the grounding does not eliminate signals. And yet is AC electric faults to that antenna wire, then it is a complete short circuit. Wire is not a perfect conductor. Therefore with frequency (and other electrical) differences, then how wire is affected by ground varies completely.

A tall steel and concrete building is completely one big grid of earth grounds. That is why long wave and near low microwave signals don't propagate well. However, that same network of steel girders earthed at the bottom can still be a good radio antenna for some frequencies.

Noise is quite complex. For example noise from appliances can propagate through the air OR it can be carried by utility wires. Some noise on AC electric only exists when the receiver 'measures' a voltage difference between any/all incoming AC wires and earth. This last type of noise is called longitudinal noise. Just another reason why sometimes the best solution to noise is either a stronger signal or solutions applied to the noise creating appliance.

There is no simple ground and there is no simple solution to noise which might explain why so many EMI/EMC engineers are bald.

An excellent earth ground is obtained by connecting to the steel girders. Wall receptacle ground is (typically) not earth ground. The two grounds are connected by a wire. How well connected can be determined by length, routing, and what that wire passes through. The window may or may not be a connection to building earthing depending on how that window attaches to the steel building frame. If connected, then the window is but another way to use the building steel girders as a big antenna. To better understand it all, first learn the wavelength of that frequency. Frequency in hz times wavelength in meters is 3.0E8 (meters per second).

Welcome to an art: grounding.

More Info On The New Grundig S350DL
As many people have noticed, the new S350DL retails for $149.95 while the older S350 is $99.95. Mike Maghakian picked up the phone and called Eton to get the full skinny. Mike reports that these are the differences in the new S350DL vs S350:

1) There is now an AFC circuit for MW/SW which significantly eliminates drift.
2) The speaker is now 4 3/4 inches.
3) Headphone jack is now stereo and includes a nice pair of headphones.
4) Clock can be set in modes that it could not be set before.
5) Radio can use 4D and 4AA batteries with a switch and both can be in the radio at the same time.

Thanks Mike!

> ready."

Yes, listen when they're ready! This is such a brand new concept!! Not at all like recording a program on a cassette and listening to it on a portable player.

All hail the fundamentally different Digital Age!!!

>
> Podcasting itself may not be the final form of radio delivery, but it is a
> step toward the goal of the BBC. "We are trying to ensure that radio
> survives in the digital age," Kimber said.

Indeed. Imagine if RF itself disappeared in the upcoming Fundamentally Different Digital Age. What would we radio hobbyists do? Stop stringing wire, I suppose. Thankfully, the BBC is on the case. If they can't ensure radio survives in the Digital Age, no one can.

>"We don't want to be the only
> media that is not digital."

Ah, yesterday's analog media. Inexplicably, there's never been so many bookstores around here as there is now. Border's, Barnes & Noble, Waldenbooks and others. We'll pity the fools on the tragic day they're all tumbling into the Digital Divide.

>
[snip]

>

"Radio
> is dead in its current form, but we see a great future for the medium."

Hmmm. Why doesn't Denmark offer other broadcasters more of a chance to get on the air? If they did, then radio in Denmark might not seem quite so dead, at least in it's current form. Although I'm sure Denmark radio will be quite lively after Digital makes Everything Better.

>
> The broadcaster, which has only four FM channels, offers 25 channels on
the
> Internet. "We want to offer people radio with a choice about where, when
and
> how they listen," Molgaard said.

Oh, now I get it. Denmark's government radio is dead because they have too much programming available for four channels. Makes sense.

And I'll bet Denmark now needs an even larger cadre of taxpayer-supported payrollers to herald the Exciting, Fundamentally Different Digital Age.

Frank Dresser

That would be Grasscutter Radio. Often operates in conjunction with Sunshine Radio. I think the gal who does Sunshine Radio is Grasscutter's wife.

I walked around my backyard last night and to my surprise the whole yard with the exception of one spot seemed pretty quiet. The only really noisy spot was near my AC compressor. So I'm thinking that despite the fact that there's a small power substation with power lines nearby, that most of the noise I'm getting is comming from within the house itself.

So perhaps my problems will be solved by simply setting up a good outside antenna rather than using the AN-LP1.

I just can't get myself to spend $150 on a single conversion radio. It was hard enough to spend $100 on the S350 that I have. Don't get me wrong, my S350 is my "sitting on the back porch at night while drinking beer" radio and I enjoy using it a great deal, but with the sub $100 stuff that Degen is putting out these days, I think that asking $150 for that kind of performance is pushing it.

Sorry. I was up early today and it has been a long
day and I meant to hit the "G" but got the "C"
instead.

The QRN is nasty here tongiht must be a storm
closing in on us.

Been playing with some feedline variations.

Since my AD607 synch detector IC didn't arrive
and given the abnormal cool weather, it was 46
Friday morning and 52 this morning I decided
to take advantage of the situation.

I took a look at your QTH pix and wondered how
far apart those 4X4s are. Looks like a nice
installation. Have you tried adding a counterpoise
along the ground underneath the antenna? I was
reading some old radio mags from the early 50'
and it was suggested as a way to improve
antennas that are close (less then 20') to the
ground.

Terry

From that view they are 50' apart... and actually that particular antenna is now 200' long but the pic is from when it was 100'. I need to take another picture. That one was from 2001 after I did the initial installation.

The support you see in the far background to the right of the closest 4X4 is one of the supports for the 70' wire.

I've not given any thought to adding a counterpoise.

Greetings! I have recently been doing some study on the Indian Nations of the North American continent. In truth, we really did slaughter the Indian Nations of this country into submission. We learned it from our European ancestors who initially came to this country as settlers looking for a good investment. The profit was made at the cost of these peaceable peoples lives and cultures. Ninty percent of the Indian peoples died as a result of our considering their lives as somehow unworthy compared to ours. The last Indian war was in 1913, still recent history. Why shouldn't our military leaders think that with all of our technology and power that we can't do the same to these "3rd world peoples" as we did to the Indians a scant 100 to 150 years ago?

I've gone to Universal Radio's website and read about the AOR AR7030+
reciever and did a google search for reviews on it as well. It would seem
that it would be a great pick for a top-notch DXing setup!

> As for an antenna, it seems that you, like me, live in an

> directionality especially at lower frequencies and you might as well
> take advantage of this functionality.

Actually, I now think some if not most of the noise problems are internal to
my house rather than external. I poked around in my backyard last night with
my portable radio, and to my surprise most of the noise was gone. I also
checked out my front yard and found it was somewhat noisier, but it's also
the side closest to the power substation, so perhaps my house is providing a
bit of shielding from it? I'm wondering if some sort of low mounted outdoor

antenna might be my best bet. I'm thinking that if I get it too high up in the air then it would be more line-of-sight to the power substation and might be noisy again. (Maybe I ought to take my portable up on the roof and see what I get up there?)

> That combination, the AOR AR7030 Plus (with the NB7030) and the

I've also read some reviews on this antenna, and most if not all gave it rave reviews. He's a review that I found interesting and helpful. http://www.radiointel.com/review-wellbrook.htm

I thought it was disease that got the Indians. When the Spanish went up the Mississippi they found farming villages with no one there any more. All dead with simple diseases they didn't have resistance to.

The problem with slaughtering people is one of simple morals. The USA is 5% of the world's population, add the rest of the developed world, and you might suggest about 20-25%. So you have to kill 70-95% of the world's population, depending on who you deem worthy. And anyone who thinks any part of that is acceptable ain't a human being.

International HF broadcasting has a long while to go yet, not least because
it is CHEAP.
It is cheaper than satellites and cheaper than DRM. Radio Wantok Light is a
fine example. People can hear this with a $5 chinese built portable radio.
XM Radio is not in this part of the world yet.

Brad.

The NPR store? Yup, scalping is too civilized for the europeans, as
were the "manhood" torture rituals.

Fact is, once the european settlers came in sufficient quantities to
bump heads with the locals, each used the other in settling, um, local
politics.

Quiz time: What were the sides in the French and Indian War?

i have several sangean sw radios that exhibit the same signal increase thing when the antenna is barely plugged in. even if the signal is louder it seems that the signal to noise ratio remains the same. its the same as just turning up the volume. the signal is louder but the background noise level is also increased. after lots of fiddling and testing i have figured out that there is no benefit at all.

I'd expect the Sony to perform better, but a casual program listener might be happy to trade performance for a tuning knob and the ability to use D batteries.

Lacking the real estate and high trees to put up a good longwire (> 100 ft), I plan to erect an L shaped wire along neighbors fence line. The base of the L is about 50 feet long; the 'upright' is about 60 feet. The base runs perpendicular to an in-roof dipole (33 feet) which is my main antenna, which seems to work well over most of the HF band.

My question is whether or not the L shape vs. a straight run will affect (positively or negatively) my ability in terms of directivity, as compared to the dipole.

I'm hoping that the longwire will offer me more opportunities for DX and improve received signal strength on many stations. I also like to listen to MW (local and DX) as well as LF.

Suggestions, comments, criticisms please.

HankG

Two years before 9/11, candidate Bush was already talking privately about attacking Iraq, according to his former ghost writer
Houston: Two years before the September 11 attacks, presidential candidate George W. Bush was already talking privately about the political benefits of attacking Iraq, according to his former ghost writer, who held many conversations with then-Texas Governor Bush in preparation for a planned autobiography.

ï¿½He was thinking about invading Iraq in 1999,ï¿½ said author and journalist Mickey Herskowitz. ï¿½It was on his mind. He said to me: ï¿½One of the keys to being seen as a great leader is to be seen as a commander-in-chief.ï¿½ And he said, ï¿½My father had all this political capital built up when he drove the Iraqis out of Kuwait and he wasted it.ï¿½ He said, ï¿½If I have a chance to invadeï¿½.if I had that much capital, Iï¿½m not going to waste it. Iï¿½m going to get everything passed that I want to get passed and Iï¿½m going to have a successful presidency.ï¿½

Herskowitz said that Bush expressed frustration at a lifetime as an underachiever in the shadow of an accomplished father. In aggressive military action, he saw the opportunity to emerge from his fatherï¿½s shadow. The moment, Herskowitz said, came in the wake of the September 11 attacks. ï¿½Suddenly, heï¿½s at 91 percent in the polls, and heï¿½d barely crawled out of the bunker.ï¿½

That President Bush and his advisers had Iraq on their minds long before weapons inspectors had finished their work ï¿½ and long before alleged Iraqi ties with terrorists became a central rationale for war ï¿½ has been raised elsewhere, including in a book based on recollections of former Treasury Secretary Paul Oï¿½Neill. However, Herskowitz was in a unique position to hear Bushï¿½s unguarded and unfiltered views on Iraq, war and other matters ï¿½ well before he became president.

In 1999, Herskowitz struck a deal with the campaign of George W. Bush about a ghost-written autobiography, which was ultimately titled A Charge to Keep : My Journey to the White House, and he and Bush signed a contract in which the two would split the proceeds. The publisher was William Morrow. Herskowitz was given unimpeded access to Bush, and the two met approximately 20 times so Bush could share his thoughts. Herskowitz began working on the book in May, 1999, and says that within two months he had completed and submitted some 10 chapters, with a remaining 4-6 chapters still on his computer. Herskowitz was replaced as Bushï¿½s ghostwriter after Bushï¿½s handlers concluded that the candidateï¿½s views and life experiences were not being cast in a

sufficiently positive light.

According to Herskowitz, who has authored more than 30 books, many of them jointly written autobiographies of famous Americans in politics, sports and media (including that of Reagan adviser Michael Deaver), Bush and his advisers were sold on the idea that it was difficult for a president to accomplish an electoral agenda without the record-high approval numbers that accompany successful if modest wars.

The revelations on Bushï¿½s attitude toward Iraq emerged recently during two taped interviews of Herskowitz, which included a discussion of a variety of matters, including his continued closeness with the Bush family, indicated by his subsequent selection to pen an authorized biography of Bushï¿½s grandfather, written and published last year with the assistance and blessing of the Bush family.

Herskowitz also revealed the following:

-In 2003, Bushï¿½s father indicated to him that he disagreed with his sonï¿½s invasion of Iraq.

-Bush admitted that he failed to fulfill his Vietnam-era domestic National Guard service obligation, but claimed that he had been ï¿½excused.ï¿½

-Bush revealed that after he left his Texas National Guard unit in 1972 under murky circumstances, he never piloted a plane again. That casts doubt on the carefully-choreographed moment of Bush emerging in pilotï¿½s garb from a jet on the aircraft carrier USS Abraham Lincoln in 2003 to celebrate ï¿½Mission Accomplishedï¿½ in Iraq. The image, instantly telegraphed around the globe, and subsequent hazy White House statements about his capacity in the cockpit, created the impression that a heroic Bush had played a role in landing the craft.

-Bush described his own business ventures as ï¿½floundering ï¿½ before campaign officials insisted on recasting them in a positive light.

Throughout the interviews for this article and in subsequent conversations, Herskowitz indicated he was conflicted over revealing information provided by a family with which he has longtime connections, and by how his candor could comport with the undefined operating principles of the as-told-to genre. Well after the interviewsï¿½in which he expressed consternation that Bushï¿½s true views, experience and basic essence had eluded the American people ï¿½Herskowitz communicated growing concern about the consequences for himself of the publication of his remarks, and said that he had been under the impression he would not be quoted by name. However, when conversations began, it was made clear to him that the material was intended for publication and attribution. A tape recorder was present and visible at all times.

Several people who know Herskowitz well addressed his character and the veracity of his recollections. ï¿½I donï¿½t know anybody thatï¿½s ever

said a bad word about Mickey,ï¿½ said Barry Silverman, a well-known Houston executive and civic figure who worked with him on another book project. An informal survey of Texas journalists turned up uniform confidence that Herskowitzï¿½s account as contained in this article could be considered accurate.

One noted Texas journalist who spoke with Herskowitz about the book in 1999 recalls how the author mentioned to him at the time that Bush had revealed things the campaign found embarrassing and did not want in print. He requested anonymity because of the political climate in the state. ï¿½I canï¿½t go near this,ï¿½ he said.

According to Herskowitz, George W. Bushï¿½s beliefs on Iraq were based in part on a notion dating back to the Reagan White House ï¿½ ascribed in part to now-vice president Dick Cheney, Chairman of the House Republican Policy Committee under Reagan. ï¿½Start a small war. Pick a country where there is justification you can jump on, go ahead and invade.ï¿½

Bushï¿½s circle of pre-election advisers had a fixation on the political capital that British Prime Minister Margaret Thatcher collected from the Falklands War. Said Herskowitz: ï¿½They were just absolutely blown away, just enthralled by the scenes of the troops coming back, of the boats, people throwing flowers at [Thatcher] and her getting these standing ovations in Parliament and making these magnificent speeches.ï¿½

Republicans, Herskowitz said, felt that Jimmy Carterï¿½s political downfall could be attributed largely to his failure to wage a war. He noted that President Reagan and President Bushï¿½s father himself had (besides the narrowly-focused Gulf War I) successfully waged limited wars against tiny opponents ï¿½ Grenada and Panama ï¿½ and gained politically. But there were successful small wars, and then there were quagmires, and apparently George H.W. Bush and his son did not see eye to eye.

ï¿½I know [Bush senior] would not admit this now, but he was opposed to it. I asked him if he had talked to W about invading Iraq. ï¿½He said, ï¿½No I havenï¿½t, and I wonï¿½t, but Brent [Scowcroft] has.ï¿½ Brent would not have talked to him without the old manï¿½s okaying it.ï¿½ Scowcroft, national security adviser in the elder Bushï¿½s administration, penned a highly publicized warning to George W. Bush about the perils of an invasion.

Herskowitzï¿½s revelations are not the sole indicator of Bushï¿½s pre-election thinking on Iraq. In December 1999, some six months after his talks with Herskowitz, Bush surprised veteran political chroniclers, including the Boston Globeï¿½s David Nyhan, with his blunt pronouncements about Saddam at a six-way New Hampshire primary event that got little notice: ï¿½It was a gaffe-free evening for the rookie front-runner, till he was asked about Saddamï¿½s weapons stash,ï¿½ wrote Nyhan. ï¿½Iï¿½d take ï¿½em out,ï¿½ [Bush] grinned cavalierly, ï¿½take out the

weapons of mass destructionï¿½Iï¿½m surprised heï¿½s still there,ï¿½ said Bush of the despot who remains in power after losing the Gulf War to Bush Jr.ï¿½s fatherï¿½It remains to be seen if that offhand declaration of war was just Texas talk, a sort of locker room braggadocio, or whether it was Bushï¿½s first big clinker. ï¿½

The notion that President Bush held unrealistic or naï¿½ve views about the consequences of war was further advanced recently by a Bush supporter, the evangelist Pat Robertson, who revealed that Bush had told him the Iraq invasion would yield no casualties. In addition, in recent days, high-ranking US military officials have complained that the White House did not provide them with adequate resources for the task at hand.

Herskowitz considers himself a friend of the Bush family, and has been a guest at the family vacation home in Kennebunkport. In the late 1960s, Herskowitz, a longtime Houston Chronicle sports columnist designated President Bushï¿½s father, then-Congressman George HW Bush, to replace him as a guest columnist, and the two have remained close since then. (Herskowitz was suspended briefly in April without pay for reusing material from one of his own columns, about legendary UCLA basketball coach John Wooden.)

In 1999, when Herskowitz turned in his chapters for Charge to Keep, Bushï¿½s staff expressed displeasure ï¿½often over Herskowitzï¿½s use of language provided by Bush himself. In a chapter on the oil business, Herskowitz included Bushï¿½s own words to describe the Texanï¿½s unprofitable business ventures, writing: ï¿½the companies were floundering ï¿½. ï¿½I got a call from one of the campaign lawyers, he was kind of angry, and he said, ï¿½Youï¿½ve got some wrong information.ï¿½ I didnï¿½t bother to say, ï¿½Well you know where it came from.ï¿½ [The lawyer] said, ï¿½We do not consider that the governor struggled or floundered in the oil business. We consider him a successful oilman who started up at least two new businesses.ï¿½ ï¿½

In the end, campaign officials decided not to go with Herskowitzï¿½s account, and, moreover, demanded everything back. ï¿½The lawyer called me and said, ï¿½Delete it. Shred it. Just do it.ï¿½ ï¿½

ï¿½They took it and [communications director] Karen [Hughes] rewrote it,ï¿½ he said. A campaign official arrived at his home at seven a.m. on a Monday morning and took his notes and computer files. However, Herskowitz, who is known for his memory of anecdotes from his long history in journalism and book publishing, says he is confident about his recollections.

According to Herskowitz, Bush was reluctant to discuss his time in the Texas Air National Guard ï¿½ and inconsistent when he did so. Bush, he said, provided conflicting explanations of how he came to bypass a waiting list and obtain a coveted Guard slot as a domestic alternative to being sent to Vietnam. Herskowitz also said that Bush told him that after transferring from his Texas Guard unit two-thirds through his

six-year military obligation to work on an Alabama political campaign, he did not attend any Alabama National Guard drills at all, because he was ï¿½excused.ï¿½ This directly contradicts his public statements that he participated in obligatory training with the Alabama National Guard. Bushï¿½s claim to have fulfilled his military duty has been subject to intense scrutiny; he has insisted in the past that he did show up for monthly drills in Alabama ï¿½ though commanding officers say they never saw him, and no Guardsmen have come forward to accept substantial ï¿½rewardsï¿½ for anyone who can claim to have seen Bush on base.

Herskowitz said he asked Bush if he ever flew a plane again after leaving the Texas Air National Guard in 1972 ï¿½ which was two years prior to his contractual obligation to fly jets was due to expire. He said Bush told him he never flew any plane ï¿½ military or civilian ï¿½ again. That would contradict published accounts in which Bush talks about his days in 1973 working with inner-city children, when he claimed to have taken some of the children up in a plane.

In 2002, three years after he had been pulled off the George W. Bush biography, Herskowitz was asked by Bushï¿½s father to write a book about the current presidentï¿½s grandfather, Prescott Bush, after getting a message that the senior Bush wanted to see him. ï¿½Former President Bush just handed it to me. We were sitting there one day, and I was visiting him there in his officeï¿½He said, ï¿½I wish somebody would do a book about my dad.ï¿½ ï¿½

ï¿½He said to me, ï¿½I know this has been a disappointing time for you, but itï¿½s amazing how many times something good will come out of it.ï¿½ I passed it on to my agent, he jumped all over it. I asked [Bush senior], ï¿½Would you support it and would you give me access to the rest of family?ï¿½ He said yes.ï¿½

That book, Duty, Honor, Country: The Life and Legacy of Prescott Bush, was published in 2003 by Routledge. If anything, the book has been criticized for its over-reliance on the Bush familyï¿½s perspective and rosy interpretation of events. Herskowitz himself is considered the ultimate ï¿½as-told-toï¿½ author, lending credibility to his account of what George W. Bush told him. Herskowitzï¿½s other books run the gamut of public figures, and include the memoirs of Reagan aide Deaver, former Texas Governor and Nixon Treasury Secretary John Connally, newsman Dan Rather, astronaut Walter Cunningham, and baseball greats Mickey Mantle and Nolan Ryan.

After Herskowitz was pulled from the Bush book project, the biographer learned that a scenario was being prepared to explain his departure. ï¿½I got a phone call from someone in the Bush campaign, confidentially, saying ï¿½Watch your back.ï¿½ ï¿½

Reporters covering Bush say that when they inquired as to why Herskowitz was no longer on the project, Hughes intimated that Herskowitz had personal habits that interfered with his writing ï¿½ a claim Herskowitz said is unfounded. Later, the campaign put out the

word that Herskowitz had been removed for missing a deadline. Hughes subsequently finished the book herself ï¿½ it received largely critical reviews for its self-serving qualities and lack of spontaneity or introspection.

So, said Herskowitz, the best material was left on the cutting room floor, including Bushï¿½s true feelings.

ï¿½He told me that as a leader, you can never admit to a mistake,ï¿½ Herskowitz said. ï¿½That was one of the keys to being a leader.ï¿½

Research support for this article was provided by the Investigative Fund of The Nation Institute.

I used 1:1 transformers at the antennas (random wire) and at the receivers (two receiving locations in the house), similar to the diagram @

http://www.anarc.org/naswa/badx/antennas/

I did this before seeing the above diagram. There is no direct ground at the antennas or at the receivers in my setup. Knocked out 99.9 % of the junk. Repeated this on an active antenna after the "shack box" to keep the downlead separated from the station receivers. This worked great as well. I am mostly interested in NDB DX but this worked good for SW as well in my situation. YMMV!

I have an extra RS medium wave loop antenna in excellent condition that I'm not using. I think they are now discontinued at RS. Great for substantially boosting the signal input to most MW radios with ferrite bar antennas. $28 shipped in US.

I agree and I like the S350. I never owned one but was checking it out in
the Sharper Image. I like the way the radio feels and the tuning knob has a
nice feel to it. As Mark pointed out most people want or like a tuning knob
on the radio. They just seem to go hand in hand.

But I don't think it's worth $150 for these extra options. I'm considering
picking up an "open box" S350 for like $60 on Ebay.
That's what I think they are worth new. No more then $80. Now I'll wait till
reviews come out for the new one just to see what gives.

Isn't it just AMAZING, totally AMAZING how our weak little piss ant media doesn't cover the DSM {Downing Street Memo} like it does the "Runaway bride" story if you can call it one for freaken 10 days straight? Or "Tom and Kates wedding"?
Holy shit.....

Is the media scared of this administration? Are the journalists scared of their bosses? What is going on? Plus with all the new Homeland security laws allowing the FBI to just do whatever they please, we now live in a dictatorship.

A state where the media and other organizations are actually scared to speak up. Where the administration allows the country to be invaded and where our rights that SOLDIERS DIED FOR are washed away forever with a stroke of a pen.

Bush and Cheney are enemies of the state. I know, you hate me, not the message or the facts. When someone with no brain is "your hero", who are you really talking to anyway?

I returned from three weeks on the road to find it very difficult to receive Armed Forces Radio on 5446.5, 7811 or 12133.5. These three frequencies usually work best for me, so what gives? Is anyone else having trouble or is propagation just poor to my neck of the woods?

Steve

I own one of the very first Tecsun BCL-2000s (the original Chinese version of the S350) to be shipped outside of China, and I have never seen a reason to "fix" this radio.

Sure, the frequency drifts some. I consider it a badge of honor to own an analog radio with a little drift. But this radio's real charm is its size, its look (I have one of the original candy-apple red ones), its sound, and its sensitivity. I am 100% satisfied with mine, and wouldn't pay a penny more for any of the latest version's supposed improvements.

The endless delays on this radio would concern me. I can't help but wonder if there is something that manufacturing just hasn't been able to figure out on the E1.

With radio stores now taking orders and ads running, this has got to be putting incredible pressure on manufacturing to deliver the radio. This can lead to short cuts and a "just ship it" mentality.

Not saying this is happening here...but if you have ever worked in a company where Marketing makes big promises to the world without bothering to check with R&D or Manufacturing to see if it is practical or possible - then you have a recipe for customer disappointment.

Eton/Lextronics had a rocky rollout of the Sat. 800 with lots of QC problems entering the market. Early customers of the E1 are either going to wind up the beneficiaries of them taking their time to "get it right" or they will be beta-testers.

I wonder what the real story is on the E1.....anyone know?

He left out Radio Netherlands, who has just about all their
programs available on download in MP3 and even some in Ogg Vorbis
(the open source/Linux codec).

Radio Aus. has a pretty good collection in their trial, too.
Late Night Live and The Science Show among them.

It's a great backup when the K index goes through the roof. But with 25
megabytes for a 55 minute show (LNL from Radio Aus.), it took about 2 1/2
times realtime to download it on my cheap dialup connection. But after
you get it, it beat the heck out of realtime streaming RealAudio, with
better sound and no dropouts and the ability to quickly fast forward and
back.

The most mindboggling thing was to burn the MP3 file to a CD-ROM and
play Late Night Live on my TV set through a $30 Sungale DVD player.

Yeah, I don't see the point of sinking that much money into a portable anyway. For a little more you could get one of the small Palstar tabletops. The E1 will get you portable performance at a tabletop price.

Radical Son

Bush may not have read Dostoyevskyï¿½but his speechwriters have.

by Justin Raimondo

In a world aflame with war and terrorism, George W. Bushï¿½s second inaugural address was a match flung onto an oil slick. By the time his 17-minute peroration reached midpoint, it was clear that was his intention:

Because we have acted in the great liberating tradition of this nation, tens of millions have achieved their freedom. And as hope kindles hope, millions more will find it. By our efforts we have lit a fire as well, a fire in the minds of men. It warms those who feel its power; it burns those who fight its progress. And one day this untamed fire of freedom will reach the darkest corners of our world.

ï¿½A fire in the mindï¿½ï¿½such a felicitous phrase. It aptly and succinctly describes the feverish mental state of our neoconservative policymakers, who set out to build an empire in the Middle East and now, with this speech, clearly envision much more. It also describes the mental state of some of the characters in Dostoyevskyï¿½s The Possessed (or The Devils), from which the fiery metaphor is taken. Michael Barone pointed out the allusion in his U.S. News column, wherein he described Dostoyevskyï¿½s work as ï¿½a novel about a provincial town inspired by new revolutionary ideas. After a turbulent literary evening, a fire breaks out, and one townsman says, ï¿½The fire is in the minds of men, not in the roofs of buildings.ï¿½ï¿½

Well, not quite. The novel is about a group of revolutionaries who plot the destruction of a small provincial townï¿½and, by extension, the whole of Russia and of human civilization. The intricate plot involves the governor of the province, who is continually beset by his wife and her liberal intellectual friends: they take up fashionably radical ideas almost, it seems, just to show him up as a bore. Members of this devilish clique have insinuated themselves into the higher social circles and, Rasputin-like, have bewitched the governorï¿½s wife and high society in general, all the while plotting and scheming behind the scenes. The governor is subtly provoked into cracking down on rebellious workers, the rabble rises up in the midst of a bizarre fete given by the governorï¿½s vacuous wife, and the town is burned to the ground. The scene from which Bushï¿½s fiery call to arms is taken finds the narrator discovering the governor in the midst of this chaotic scene, gesticulating and shouting at a building consumed by the blaze:

ï¿½Itï¿½s all incendiarism! Itï¿½s nihilism! If anything is burning, itï¿½s nihilism!ï¿½ I heard almost with horror; and though there was nothing to be surprised at, yet actual madness, when one sees it, always gives one a shock.

Ignoring the pleas of his subordinates to get to safety, the half-mad governor continues on with his soliloquy:

ï¿½They will wipe away the tears of the people whose houses have been burnt, but they will burn down the town. Itï¿½s all the work of four scoundrels, four and a half! Arrest the scoundrel! He worms himself into the honor of families. ï¿½Itï¿½s vile, vile!ï¿½ Suddenly noticing a fireman at the top of the burning lodge, he asks: ï¿½What is he doing there?ï¿½

ï¿½He is putting the fire out, your Excellency.ï¿½

ï¿½Not likely. The fire is in the minds of men and not in the roofs of houses. Pull him down and give it up! Better give it up, much better! Let it put itself out.ï¿½

The fire does not break out as a result of spontaneous combustion, as Barone seems to imply: it is deliberately set by disgruntled workers acting under the influence of a nihilistic cabal. This is meant to dramatize Dostoyevskyï¿½s view of the Russian revolutionaries of his time, whom he saw as possessed by a desire to destroy and little else.

In any case, the borrowed imagery is far from obscure. Fire in the Minds of Men: Origins of the Revolutionary Faith is the title of a classic study of 19th-century radicalism by James H. Billington, now the Librarian of Congress. Certainly none of this was unknown to the men who shaped this speech ï¿½not counting the man who delivered it. The Los Angeles Times reported:

White House political aide Karl Rove and chief speechwriter Michael Gerson held a two-hour seminar with a panel of foreign policy scholars, including several leading neoconsï¿½newspaper columnist Charles Krauthammer, Fouad Ajami of Johns Hopkins University and Victor Davis Hanson of Stanfordï¿½s Hoover Institutionï¿½according to a person who was present.

The Washington Post reported that Bill Kristol also coached Bush on the speech.

These four neoconservative ideologues, presided over by Rove, are the 21st-century equivalent of Dostoyevskyï¿½s revolutionary devilsï¿½and, whatï¿½s more, they seem to know it. As Dostoyevsky put it: ï¿½Itï¿½s all the work of four scoundrels, four and a half!ï¿½ A prophetic sentence, that.

Bushï¿½s peroration was suffused with fire, it burned with the steely-eyed fanaticism of the ideologues who forged it, full of phrases that soared so far above the real world that a good many listeners had trouble believing their ears. Does the president

seriously believe ï¿½the survival of liberty in our land increasingly depends on the success of liberty in other landsï¿½? Surely he didnï¿½t really mean to explain away the exponential expansion of big government in America as due to the lack of civil liberties in, say, the former Soviet Union or the oppression of women in Saudi Arabia? The war-weary wondered, at home and abroad, as they listened to the most powerful man on earth enunciate his militant doctrine: what new conflict will erupt as a result of a crusade to accelerate ï¿½the expansion of freedom in all the worldï¿½? What else could be the meaning of a pledge ï¿½to seek and support the growth of democratic movements and institutions in every nation and culture, with the ultimate goal of ending tyranny in our worldï¿½?

In a vain attempt to reassure the panicked, Bush senior made a rare intervention. ï¿½People want to read a lot into it,ï¿½ he said, ï¿½that this means new aggression or newly assertive military forces. Thatï¿½s not what that speech is about. Itï¿½s about freedom.ï¿½

In other words, itï¿½s all talk and no action. But there is already plenty of action going on in Iraq and good reason to expect more. Rumors of war with Iran are persistent and credible. Seymour Hersh, whose record has been pretty good so far, reports that U.S. operatives are already penetrating Iranian territory in search of Tehranï¿½s elusive nukes. And in Eastern Europe, on the far frontier of what used to be the heartland of the old Russian empire, a Western-financed ï¿½orange revolutionï¿½ is engineered by a coalition of the U.S. and an expansionist European super-state, while NATO edges closer to the gates of Moscow.

In Dostoyevskyï¿½s day, urban radicals influenced by Marx and emboldened by Bakunin went out into the countryside proclaiming the doctrines of socialism and syndicalist anarchism, to little effect. They committed sporadic acts of spectacular violence and functioned roughly. Such groups as the Narodnaya Volya (Peoplesï¿½ Will), whose militants assassinated two Russian czars, were 19th-century versions of al-Qaeda. Dostoyevskyï¿½s novel is a dark chronicle of the psychology that energized their terroristic brand of nihilism.

The ï¿½fire in the minds of menï¿½ eventually engulfed all Russia; The Possessed bitterly foreshadowed the red inferno of the 1917 revolution. That a phrase torn from its entrails should augur a new worldwide revolutionary movement seems almost like payback for the authorï¿½s notoriously ï¿½reactionaryï¿½ views. Yet it does seem as if the new militants are following in the footsteps of Dostoyevskyï¿½s original models, venturing out from the Western metropolis into the countryside of the world, bent on ï¿½liberatingï¿½ poor oppressed peasants who languish in premodernity. That they would meet with the same overt hostility that greeted the Narodniks of yesteryear was all too predictable. As Russell Kirk warned in a 1990 speech:

A politicized American army operating abroad would be no more popular ï¿½ than the Red Army has been. An imposed or induced abstract democracy

thrust upon peoples unprepared for it would produce at first anarchy, and theniï¿½as in nearly all of iï¿½emergentiï¿½ Africa, over the past four decades iï¿½rule by force and a master.

The neocons, who revile Kirkiï¿½s memory on account of this scolding, threw their hats in the air as Bush embraced their core agenda. iï¿½This is real neoconservatism,iï¿½ Robert Kagan exulted to the Los Angeles Times. iï¿½It would be hard to express it more clearly. If people were expecting Bush to rein in his ambitions and enthusiasms after the first term, they are discovering that they were wrong.iï¿½

Others were not so ebullient. iï¿½If Bush means it literally, then it means we have an extremist in the White House,iï¿½ said Nixon Center president Dimitri Simes. iï¿½I hope and pray that he didniï¿½t mean it iï¿½ [and] that it was merely an inspirational speech, not practical guidance for the conduct of foreign policy.iï¿½

William F. Buckley Jr. pronounced the speech iï¿½confusing.iï¿½ Aside from being iï¿½an improvisation,iï¿½ it was also embarrassingly ungrammatical: iï¿½Mr. Bush said that iï¿½whole regions of the world simmer in resentment and tyranny.iï¿½ You can simmer in resentment, but not in tyranny.iï¿½ The speech was, in Buckleyiï¿½s view, bad policy as well as execrable grammar: iï¿½What about China? Is it U.S. policy to importune Chinese dissidents iï¿½to start on this journey of progress and justiceiï¿½? How will we manifest our readiness to iï¿½walk at [their] side?iï¿½iï¿½

If the National Endowment for Democracy isniï¿½t already on the job, the presidentiï¿½s recent pronouncements are bound to direct their efforts in Chinaiï¿½s direction. Professor Claes Ryn saw where all this was leading, and he put it quite well in his 2004 address to the Philadelphia Society:

The notion that America knows better than all other nations and has a right to dictate terms to them betrays a monumental conceit. It also guarantees that other nations will see a need to arm themselves just to have some protection against American bullying. iï¿½ China, which has long found Western hegemony intolerable and is already strongly prone to nationalism, can be expected to respond to American assertiveness by greatly expanding its military power. If present trends continue, the time should soon be ripeiï¿½in 50 years perhaps?iï¿½for a horrendous Sino-American confrontation.

Nothing is iï¿½too massive a challenge to our liberationist policyiï¿½ that it dwarfs the monumental edifice of the liberationistsiï¿½ conceit. Yes, but iï¿½what about Saudi Arabia?iï¿½ asks Buckley. iï¿½Will we refuse to buy Saudi oil?iï¿½ I would think that the real objective is to seize it.

Peggy Noonan found the speech iï¿½startling,iï¿½ and confessed it left her iï¿½with a bad feeling, and reluctant dislikeiï¿½ evoked by such grandiose phrases as iï¿½we are ready for the greatest achievements in the history of freedom.iï¿½ This, she averred iï¿½is the kind of sentence that makes you wonder if this White House did notiï¿½ have a case of what I have called

in the past ï¿½mission inebriation.ï¿½ A sense that there are few legitimate boundaries to the desires born in the goodness of their good hearts.ï¿½

Drunk with power, flush with Pyrrhic victories, and convinced that they are on the right side of history, the ï¿½mission inebriationï¿½ that bedevils this administration is Ms. Noonanï¿½s polite way of describing megalomania. The defining characteristic of what Ryn calls the ï¿½imperialistic personalityï¿½ is a monumental conceit: it is the same will to dominate that drove the Jacobins, the Bolsheviks, and the 19th-century followers of the nihilist Sergei Nechaev, upon whom the author of The Possessed modeled his characters. That American policymakers will likely end up like Dostoyevskyï¿½s revolutionary conspirators ï¿½increasingly committed to state terrorism in pursuit of some utopian visionï¿½seems horribly and tragically inevitable.

If it works as wll as the S-800 on MW/HF it is certainly more of a
listener's radio than a Palstar.

If you have a chance to see "Last Of the Mohicans" (movie), the book is impenetrable. This does a good job of portraying the brutality on all sides, including the now extinct "peaceful" Huron. The difference between Europeans coming to the Americas was numbers, technology (including weapons), disease, and willingness to use them. Pretty near any people will do such things and did historically.

I've heard this. There is apparently some debate about whether in fact it is true that syphilis originated in the new world. But sexual transmission is not as efficient as airborne and physical contact. (Please let's not talk about how syph lept from animals to people.)

There are cheaper "listerner's radios" than the E1. The S-800 is a good example. It's significantly cheaper than the E1, as are others.

And one could always buy the Palstar and spend a litte extra on an external speaker. If you're gonna spend tabletop dollars, at least get tabletop performance.

That one's been being debated for ages, with everyone getting the finger pointed at them at one time or another. I was always told it was the Dutch who started it, for example.

I got lucky. I was going to try and provide a URL to a book called _The European and the Indian_ by James Axtell. While looking for a suitable link, I actually found an article written by the guy instead of a mere excerpt or quote. Interesting reading, IMO.

Hi there Ismyer,

You've convinced me to pick up one off Ebay. While I was playing with it in the store, I took a liking to it immediately with it's style and personality.
Has a nice feel and look to it. But, I have no idea how good it's performance is. I have a Degen 1103 for my portable.

My Lowe HF-150 is portable too but I just can't take it outside yet. I think it's too good of a receiver to take any unnecessary chances with it! I mean it.

But, I could see myself taking the S350 out for a walk and some ice cream....

I came to the conclusion years ago that loop type antennas are the best
bet for most people. The amplified loops can be made smaller and due to
size you have more options where to locate it but they are more
expensive than the passive loops.

You can build a shielded passive loop out of coax. A general purpose one
of 40 to 60 foot circumference should be electrically balanced and the
smaller ones (< 20 foot) can be non-balanced for more gain. The small
non-balanced ones pickup both the E and M fields of a passing EM wave
where the balanced one picks up the M part only.

The difference between the balanced and unbalanced is where the shield is split. Say you take a 50 foot piece and loop it back on itself ten feet from one end. At that point you solder the center conductor of the end of the cable to the shield. The the outer shield of the cable is not connected and floats. The 10 foot section behaves as a transmission line to the radio in this example. This will probably be to much antenna on the lower bands for most table top or any sensitive radio. This is not a shielded loop. This loop is high output and responds to both the E and M fields, which is why you have a larger output.

To make a balanced loop at that 10 foot point you solder both the center conductor and shield of the cable end to the coax shield. Then half way around the loop you cut the outer insulator and shield only. Now you have a balanced loop that only responds to the M field. The output will be less but so will the local noise that is limiting your reception. The balanced loop is shielded against local common mode E field noise.

This balanced loop will be the most like the Wellbrook if you can manage to get it some distance from local noise sources. You need it to be some distance away from the local noise sources so the noise field is equal over the area of the loop so it can be canceled. Here a small 1 meter loop like the Wellbrook has the advantage. It can be much closer to local noise sources and cancel them out. Another advantage the Wellbrook has is flatter response over the 3 to 30MHz range. The response of the passive loop will change over that range depending on its size but not a lot. Another advantage the Wellbrook has is that you can turn it but you can always build two passive loops at right angles to each other and switch between them. This is good for all except nulling of course.

I think the Wellbrook is worth the money but if you don't want to spend that much or if you like to make your own passive loop its easy. The noisiest locations will probably still do better with the Wellbrook though. I don't think you can beat a well designed small amplified loop for a poor receiving location.

It's not a bad radio to take outside, but it's a bit heavy to tote around all day, especially when it's full of four D-cells. The padded handle comes in real handy.

> Suggestions, comments, criticisms please.

I suggest that you build a passive loop I posted about in the thread
"Re: Looking for a real DX setup."

Build the balanced shield type. They don't take up a lot of room. A 40
foot loop is only 10 foot a side in square shape. The trade off in loop
size is how much signal it picks up verses common mode noise rejection.
Bigger loops need to be farther away from a local noise source but they
pick up more signal. Smaller loops pick up less signal but reject local
noise better.

A Marconi type antenna is nearly useless in my neck of the woods.

David,
Would you please stop posting all these articles. Those who seek information on current political information can find it quite well with the multitude of sources online, various written news outles and over-the-air broadcast. This group has been fairly quiet lately in terms of OT posts and political threads that escalate into senseless name-calling and bickering - your posts only serve as a catalyst for "newsgroup mayhem" to return to r.r.s. I have read your on-topic posts and you are capable of being a sound contributor to the topic of this newsgroup; please exercise that option in future postings.

Thank You,
Howard

The black Tecson BCL2000 looks very nice also. I read Grundig will come out with red and black s350DLs. So prices on the old models should head south fast.

1664. Copper flashing Roof Antenna

Newsgroup: rec.radio.shortwave
Date: 2005-06-20 00:26:35 UTC
From: Dan <diverd4778@aol.com>
Message-ID: <1119227194.969091.20900@g44g2000cwa.googlegroups.com>
Source record: 25301

- at about 20:0 UTC.. quietly went up on the roof & hooked a portable, double reduction set (Sangean 606A) into the newly installed copper flashing surrounding our apt house roof.

Picked up BBC from Cambria (very clear signal) And radio New Zealand ..
(acceptable) just tuning around
Many other mid eastern / S.American stations, which I did not log,

Picked up local flamethrowers all over the lower part of the dial but no matter..

HAs anyone else tried this, using their roof's flashing as an antenna, and if so, what were the results.. ?

Dan / NYC..

1665. response to my ebay question to seller on item 5783443803

Dear aerospace_surplus,

the back of the receiver says DR22, how could it be the DR33 ???????????
------his answer-------

i bought this from boeing i'm not a radio mother fucking expert

you can see how i try to hide all the tags so a dumbfuck like you cant see
them

fuck you

more mindless insults from little Bozo...what is this one? Number four out of a repertoire of ....four....? Things haven't been the same since that horse you were molesting kicked you in the head. Come to think of it, aren't you using that pre-existing injury to get an insurance settlement now? That would be so YOU..Amazing what the promise of thirty thousand does even to the 'morals' of a pervert.

Two of them were indeed broken in half by Hugo, but Jefferson- Pilot,
to their eternal credit, had them reconstructed as they were before.
The station operated at 10 KW nondirectional during the re-
construction.

Jim Hawkins has some pix of the busted towers at:

Remember that Eton didn't have to do any development for the Sat800. It's
just a repackaged Drake SW8. I don't know what the E1 started from.

Greetings All! Disease was a major killer among the Indians, however wholesale slaughter was just as devastating. And yes Brenda Ann is correct. The French initiated the idea of scalping. The bulk of the Indians were on the side of the French during the French and Indian war, but there were the western tribes, this side of the Mississippi but on the other side of the Appalatians that were on the British side. The Indians also fought many wars against each other, but other than the northeastern bands of Indians, the bulk of American Indians were for the most part peace loving people. The wholesale slaughter of the Indian peoples was perfected with the tribes in the west. Man has lived many millenia on this planet and with all the advances in technology you are seeing how little of it is being used in a beneficial way to help those less fortunate. For the countries of great wealth and ability there will be a heavy toll to pay for how we have squandered the resources that we have, not just the Americans, but the western nations as a whole. Remember the parable Jesus told about the talents? Matthew 25:14-30.

Good morning HomePC
```

I know what you mean. I'm always a little worried about it when I carry it around outside and depend on that string to support it. But, they kept the radio cheap by doing this. Degen put their resources into the inside of the radio where it really counts. That's why you can buy one so cheap.

I'm talking about getting it off Ebay at rock bottom prices. I got mine shipped for like $65 Heck even the USA version at $79 is a good deal. I find the 1103 to be a miniature tabletop receiver. It can pick up SSB just fine. Very sensitive for a portable.

I've decided to hold off on my S350 purchase. One main reason is it only takes D sized batteries. I don't have a D cell recharger and I don't plan on buying new batteries every 3 days. So, for the price of a D sized recharger and the radio, I might as well wait to see where the S350DL prices go.

It might come out the same total price so I'd rather have the DL if it really fixed the drift and it sounds better. Plus, it can use AA's batteries as well as Ds. That's a big factor for me. It cuts down on the weight of the radio and I have a 8 way AA recharger. If they go for $150 retail, I bet the Taiwan dealers hack it down to $99 for sure.

Lucky

You find everyone elses problems "too funny" It seems you're such an ugly fat slob that the only way you can feel better is laugh at the misfortunes of others. But with a name like "beerbarrel", we sought of have your intelligence and social standing in the world figured out.

Now go scratch your ass and have another brew.....

Well come on over here Mr. Academic weenie....I've lived, worked and
fought in the Middle East for the past 24 years....try to level your
theories in the face of brutal subjegation of these peoples by a
radical or elite minority who rape and pillage in the truest sense, or
one better than our CEOs ever envisioned. Clear fact is that unless we
affect a cultural transformation not of Islam, but the Arabs,
extermination is the only road left to the rest of the civilized world.
Their hate of anything not Islamic is public, and their treachery
towards the one nation that stood between them an the European powers'
colonial amibitions after both world wars is factual. They turned
towards an athesitic eastern power......so we turned to Israel.

You miss the biggest point in all of this dying and liquid political
rhetoric.... the younger generation here wants what we already have,
but a small group wants the status quo under the auspices of religious
edicts, hadiths, and not dogma, the Koran. What have you been seeing on
TV (CNN) is onlt the half-truth or spectrum of what I live with, hear,

and see here everyday. They are standing up for their children and their own right to personal freedom - a first in how many thousand of years. They are being jailed, or killed by the same minority that the terrorist claim to be fighting against, but receive funding from the same dictators or royalist. We had our turn at history and civil war...this is their turn in the barrel of freedom. Who are you to stand with evil forces, long supported by American and European business, and not necessarily Mr. Bush. I care not for Bush, nor moreso, the myoptic Rumpsfield...but the fact remains that they picked a fight that we are going to finish one way or the other. SO VOLUNTEER AND BE A REAL MAN AND AMERICAN OR SHUT-UP. 26% of Americans have been carrying you big mouth liberals throughout our history - it is our way of life at stake...try living over here with family or friends...the absence of freedom, and daily insecurities will change your ignorant tune.

McCain in 2008 ... or we can just get ready for another series of 9-11's .

Hi Mike

did you buy the radio from him already? I can't believe this guy is allowed to deal with people on Ebay or anywhere for that matter. Ebay allowing this guy to talk this way all this time is truly outrageous, You should call your local T.V. news station and tell them you have a Ebay story to tell them.

Show them the e-mails and try to get e-mails from the other people who he spoke to this way. The story is about Ebay's morals, rules, and the people it allows to do business with the public. I would do it. If it went on T.V. and Ebay saw it, they would HAVE to respond and suspend this guy for good.

You'd get even for yourself and all the present and future people this guy will hassle and hurt. Sorry to hear about this Mike. You didn't deserve that.

Source record: 25328

Friday, Jun 17
Exclusive: Following Employee's Hospitalization And Insecticide Complaints, OSHA Investigates Fox News

TVNewser Exclusive: Production and technical personnel at Fox News Channel were exposed to diazinon, a neurotoxin class insecticide banned by the EPA for indoor use since the year 2000, according to a complaint now under investigation by the Occupational Safety and Health Administration.

When contacted by TVNewser today, Richard Mendelson, the director of OSHA's office in Manhattan, confirmed said that the network has been contacted regarding the complaint.

"I just pulled the file, and we do have an open complaint against Fox News Channel," he said. "The complaint was lodged on June 10."

A Fox News spokesperson said the company has not been contacted by OSHA, but Mendelson said simply: "They've been contacted." He was unable to share the specifics because it is an open case. But an anonymous tipster filled in the details earlier this week.

"A technical employee was removed by ambulance and hospitalized for several days in March 2005 immediately after untrained building personnel had sprayed the technical employee lounge, unbeknownst to FNC workers on break there," the tipster wrote. "Besides illegal use of a neurotoxin, typical legal requirements that warnings be posted concerning the treatment of areas and the products in use were not being practiced by FNC or the untrained, unlicensed employees."

Mendelson said Fox has been contacted with a non-formal complaint.

"A non-formal complaint consists of a call to the employer followed by a letter," he said. "The turnaround time on that is always less than a day. The employer has to respond back to us within five working days." If the network responds and fixes the problem, they will not receive a citation. But "if the employer ignores us, we're going to go knock on their door," Mendelson said, adding that FNC's deadline for response is June 21.

The New York State Department Of Environmental Conservation may also be involved in the investigation. A call to its media relations department was not returned.

According to the tipster, FNC management claims that the incident was isolated. But the tipster, who is apparently a longtime employee, characterized that as "bullshit." "The same guys have been spraying

the same stuff for years and no one would listen when people complained it was making people sick," the e-mail said.

This FAQ by the Agency for Toxic Substances and Disease Registry says that "diazinon affects the nervous system. Some mild symptoms include headache, dizziness, weakness, feelings of anxiety, constriction of the pupils of the eye, and not being able to see clearly. More severe symptoms include nausea and vomiting, abdominal cramps, slow pulse, diarrhea, pinpoint pupils, difficulty breathing, and coma."

Why do we prop up the Saudi dictators?

Because we are too much of a bunch of pussies to bite the bullet and
quit sucking their oil. Pure and simple.

If ''democracy'' is our goal, why Operation Ajax and The Shah?

Personally, I don't give a shit about the Middle East one way or the
other. I'd prefer they keep squabbling and killing each other off.
They are perfectly capable of doing that without our cynical lies
about democracy.

We have no democracy here in the USA, yet we claim to be ''spreading''
it elsewhere, at the muzzle of a gun, like so much vile peanut butter.

Hi Jim

Really? How can that be? Are you talking about listening to it at least 2 hours/day outside? That's great if it's 6 months.

Lucky

John,

just do a search of his Ebay I.D. and you can "contact member" or view his items for sale and ask thru that venue. I wonder what his reply would be if you said "I'm gonna break your knee caps".

<snipped it all>

The "nerve gas" in the article is Diazinon - a bug poison commonly commonly used in gardening. You can get it in liquid form for use in a tank or hose end sprayer, or granules for use in a lawn spreader.

Apparently, someone goofed and used some indoors.

What's next - a report indicating George Bush sent pure hydric acid to to Iraq for the civilians to drink?

Actually he has it listed as a DR-44 and the picture is of a 44. The
DR33 looks a lot more like a DR-22. The back of a DR22 may have been
married to the DR44 chassis. This probably came from a lab or similar
environment where they gave no consideration to it's value as a radio
collectible. It was a piece of equipment like a fluke meter.

You can't get it anymore, I believe, but you
can use what you have in reserve. That sounds
like the stuff that the EPA decided to ban, and
gardeners all over the place snapped up what
was left. I should have some around myself; it's very
effective when used properly.

It's just like the stuff from 3M that protects
upholstery and carpeting: the EPA decided to ban
it, and parents everywhere made a run for the stuff
because it does such a good job of protecting your
furniture. The only people who made out like
bandits on it were the upholstery cleaning companies.

Actually, it will be ascorbic acid injected drinks.
Which, to those in the know, is Vitamin C added
to juices.

Please tell me you don't talk about this when you
go out on dates. Most people would think that
if you talked about the same thing all the time
that you'd be a bit obsessed.

Lucky,

My BCL-2000 is two years old and I have never changed its batteries. When I first got it, I went to the Dollar Store and bought four cheap Panasonic alkaline D-cells. Two years later, they are just now needing to be replaced. At first, I listened several hours a day, but lately my wife has been using the radio in the kitchen because it was something that she could pick up a distant FM station that plays really good music, so I'm not sure how much she has actually been using it.

I can assure you that you will be pleasantly pleased with this radio's frugality with batteries.

Wow. That's a pretty damn neat trick that they pulled off. 2 years on one
set of 4 D's. But, considering I'm willing to stay with Double Dees for more
then 4 years myself....if she'd stay that is, I can see the radio loving 4
:)

Here's an update:

I sent the 7030+ to AOR UK. They replaced the SD5400 mixer and one of
the front end supply chokes. Once inside the receiver, they also found
a slightly leaky preamp transformer, so they replaced that while they
were at it. The receiver is working perfectly now...no more overload.
And it sounds great with the Collins filters.

Steve

I'm having a great deal of trouble finding anything on this from any
on-line news source at all, using Google to search the news for the
quoted string "fox news" with "osha" or "spray" or "diazinon" or several
other descriptive words. I smell a hoax. There are literally hundreds
of other news services who would love to report this about Fox, so it
shouldn't be hard to find at least a dozen using Google news.

1714. Questions re Powering Receiver with a Gel Cell

Newsgroup: rec.radio.shortwave
Date: 2005-06-20 19:14:25 UTC
From: jamulc <jamulcare@gmail.com>
Message-ID: <1119294865.167181.16170@g14g2000cwa.googlegroups.com>
Source record: 25202

Hello folks,

I'm interested powering my Drake R8B from a gel cell for outdoor use.
The use of gel cells is something I'm totally new to, so I was
wondering if perhaps some of you out there who may have some
knowledge/experience with this sorta thing might be able to give me
some pointers as to
* where I might look to find a fair deal on a gel cell
* what types of models/brands are worth consideration
* what might be required in order to hook the Drake up to a gel cell
for proper powering (wires and what-not; admittedly I'm new to
this...up to now, I've only powered the Drake from the power outlet in
the wall)
I would need something that would give me at least 20 hours or so of
usage before requiring recharge, and I'm only looking to power the R8B
with the unit (not any other accessories or the like).
Any help would be much appreciated.

jamulc

"David" <rickets@knac.com> wrote
> This is too important to not talk about everywhere. Our country is
> under attack by sinister forces. We are at war.

Indeed!

Who is Dennis "Justin" Raimondo

www.DiscoverTheNetwork.com

Raimondo is a confused and confusing person, who seeks to be the master of the confusion he creates. Born plain Dennis, he renamed himself Justin, while attending the Cherry Lawn School, a defunct prep school in Darien, Conn., which he graduated in 1970.
...
He is flamboyantly gay, but promotes himself as a Buchananite conservative and was in fact Buchanan's San Francisco campaign spokesman during the "culture war" that other gays took personally, many elections ago. The entire package is deceitful, and it is a calculated deceit.
...
The movement that Raimondo has cobbled out of opponents of the Iraq war, who are drawn into his site, is unabashedly fascist. Justin Raimondo personifies an American "red-brown" alliance, like the one that surfaced briefly in the 1930s when Communists and Nazis combined forces to bring down the Weimar Republic.
...
Raimondo has always wanted to be considered an author and journalist, no less than a political figure. At about 13 or so, he seems to have imagined himself as a science fictioneer. But he never had the discipline or stamina to apply himself to any profession aside from that of absurdist publicity hound. He has failed as a journalist and political commentator, exactly as Hitler failed as a painter, as Mussolini failed as a socialist leader, and as the most notorious fascist of the left, Fidel Castro, failed as a lawyer.
...
Like his models, when Raimondo never engages intellectually with opponents, but relies on invective, insults, and innuendo. Notwithstanding his bizarre and vulnerable persona as a gay Buchananite, he glories in violating the privacy of others.
...
The psychological term for Raimondo's posturing is "projection." He is obsessed with rooting out alleged political, ideological, and even religious chameleons, with the unconscious intent of advertising his own political transvestism. This pattern is evident in all his activities: he claims that America is becoming a dictatorship, the better to justify his own ambitions for power.

...
Much, much more:

1717. China's Low Product Prices and Rising Material Costs

Newsgroup: rec.radio.shortwave

Source record: 25205

It is very important to know the truth of a situation. Many of us have had the experience of being cheated. This is because we did not know the truth; as a result, we paid prices that were too high. Not knowing the truth will cause us to erroneously evaluate the alternatives and make wrong decisions.

I recently went to dinner with students from the Taiwan Donghai University, and met a former student who is in the import-export business. He disclosed some facts to us that were quite shocking. He asked us if we knew why the material costs around the globe were rising, yet product prices are falling. It is because the supply is greater than the demand. Why is the supply greater than the demand? This is because many less expensive products sold all over the world are "Made in China." We thought that China's low labor costs were the reason. As a matter of fact, this is not the case.

Mr. Wang disclosed insider information he received from several high level Chinese Communist Party (CCP) officials. He said if a product cost 10 yuan, a normal sales price should be 12 yuan, or a minimum of 10 yuan. However, Chinese factories are selling it for only six yuan. They do have large volumes of foreign business, but isn't this still a failing business?

The CCP officials told Mr. Wang that the key is Chinese factories require "no investment." They do not need any capital, all the money comes from the state-owned banks. The factories will have income as long as they have contracts. Although the product only sells for six yuan, they only need one yuan to pay the labor expenses, one yuan to pay the bank interest, and the remaining four yuan is profit! This is their business strategy.

They divide the four yuan profit between themselves and travel overseas to buy real estate. They are not buying typical houses, but mansions, with cash. This is a very common phenomenon. Mr. Wang asked a CCP official, "What if these failing businesses go bankrupt?" He smiled; his wife and children would all immigrate overseas. He even touched his pocket, saying, "My airline ticket is right here; I can leave the country any time I want."

This is the secret of how Chinese factories operate!

The U.S. and EU are applying severe pressure on China to raise value of their currency. If China does, it will negate their export advantage, since Southeast Asia and India also have low labor costs. When Chinese factories lose business, they will not have the cash reserves to pay the bank loans and wages, and will go bankrupt as a result.

As a matter of fact, the entrepreneurs and CCP officials who are shareholders of these businesses could all foresee this happening, which is why they have all purchased mansions overseas and have even purchased their airline tickets in advance. This way they can escape when the bankruptcy

occurs.

Now I completely understand why China's banks have bad debt ratios as high as 40 percent to 50 percent. This is the truth behind China's 8 percent annual GDP growth. Now I understand why so many experts and scholars predict that China's economy will soon collapse.

I'm no expert on these matters, but I bought an SLA battery and charger from these folks: www.zbattery.com. I bought a 'smaller' (fewer amp hours) battery than you're looking for, but their service was good and I have no complaints.

You'll want to pick up a fast-blow fuse at Radio Shack for the wires leading from the battery to the spring clip terminals on the back of the R8B.

If you aren't planning to travel with your R8B and just want an alternative to your AC outlet, you might also consider an external DC power supply. Several people in this group have said nice things about the Astron supplies. You could also get an inexpensive one from Radio Shack. I have one and it works fine, though I have to put a bit of distance between it and the R8B to avoid a strange noise that's somewhere between a 'hash' and a 'hum'.

Best,

Steve

1719. American Companies With Chinese Characteristics

Newsgroup: rec.radio.shortwave
Date: 2005-06-20 19:45:33 UTC
From: Li Peng <LiPeng@ccp.gov.cn>
Message-ID: <11be785f9978i04@corp.supernews.com>

Ethan Gutmann, author of Losing the New China, delivered the following address at the first Los Angeles English-Language "Nine Commentaries" Forum held on May 28 at California Institute of Technology.
Ethan Gutmann's Thoughts on the Publication of the "Nine Commentaries"

I want to thank the organizers of this event, particularly Michael Yi. I also want to thank Broad Press, including Carolyn Lu, the editor of the Chinese edition of my book.

I'm happy to be here and talk about some of the issues following the publication of the "Nine Commentaries on the Chinese Communist Party." As a former Beijing business consultant to Western companies, I'll focus on the significance of the "Nine Commentaries" for Americans.

Now when American businessmen talk about China, in any given conversation, it's a common to hear that "China's changing." Often it's said in rather breathless tones.

There's a surface truth there: vast construction, new signs of wealth, and all the lively fashions that come with capitalism. It's undeniable. Yet, looking over the past ten years, in political terms, China has not changed that dramatically at all.

True, capitalists have been incorporated into the Communist Party. True, the one-party state has received some PR advice. Government ministries have increasingly user-friendly websites. But State power, expressed in surveillance, media manipulation, and rate of executions, is still centralized and remarkably stable.

As Americans, as American businessmen in China, we have adjusted to this state of affairs. We've bet money on it. In fact, in some ways, we have embraced it. And I'm going to talk about that today.

But I'm also going to talk about where that places us vis-�-vis a rather unexpected event: resignations from the Chinese Communist Party following the Nine Commentaries. What if China really is changing?

Now, it's an especially challenging task for an American to speak about China at this time of the year, the Tiananmen anniversary. Like most Americans, I have no personal experience in facing anything like those terrible days in June.

I've spoken with a few Americans who lived in China during the massacre-businessmen mainly. Naturally, they were frightened. The diplomatic compound in Beijing was sprayed with automatic fire as PLA units, released from weeks of a tense stand-off, went on a spree. Americans still had a special, protected status of course, but most of them -understandably- chose to

scramble for seats on any plane leaving Beijing. Planes flying into Beijing were empty.

Communist Party propaganda increasingly blamed the Tiananmen Square movement on "foreign influences." Those American expats who stayed on in Beijing found they were shunned and avoided- even by street vendors. But it was more in sorrow, than in anger. Their eyes would say: You are trouble and we have had enough of that.

Were the street vendors correct? The best propaganda always uses a caricature, however distorted, and caricatures work because they are based loosely on reality. So it was with the "foreign influences" charge. It's true that when Americans watch footage of the "Goddess of Democracy," rolling onto Tiananmen Square, our hearts pound. That moment of homage to the Statue of Liberty, yes, but also of universal democratic aspiration. It speaks to us.

Ironically, (and feel free to argue this point in the discussion) one can also make a case that for the Tiananmen movement the "Goddess of Democracy" was a tactical misstep- the end of a viable insurrection. The goddess of democracy changed the optics: students looked more elitist, less "Chinese," less patriotic- another step away from worker masses who were necessary for the movement to achieve victory. (And I mention this point in part, because I don't think that the "Nine Commentaries" has this problem.)

Yet the Communist Party charge- that foreigners had somehow led Tiananmen- How? The Bush administration was initially focused on a US naval visit in Shanghai. The embassy was taken by surprise and tried to stay neutral. American investment in China was relatively small; so was our leverage. American expats and businessmen could only wait and watch just like everyone else. American democracy was a beacon, like the torch on the Statue of Liberty or the Goddess, but ultimately Americans bear no responsibility for the Tiananmen Square movement or- in my opinion- the subsequent massacre.

I am belaboring this rather obvious point, because it underscores what a dramatically different situation we are in today.

First, because we will not see the Goddess of Democracy reappear in Beijing anytime soon. The American model is not in vogue. The Chinese Communist Party would have us believe that our current disfavor can be blamed on our current government- and our aggressive American foreign policy, Iraq, and the rest.

What a tempting and easy explanation. It's not completely false. Disfavor exists; Chinese State propaganda- anti-American propaganda- is effective. (I know something about this because I used to help make the stuff.) But I also watched students smashing up my embassy when Clinton was in the White House. And the Goddess followed eight years of Reagan. In addition, Chinese people tend to mistrust propaganda. When they can, they draw their assessments from personal experience and word of mouth.

The real representatives of America, in Chinese eyes, are on the ground: American businessmen. And I don't believe that we really act as a beacon.

Why? Well, first because we have acquiesced to Chinese corruption. Take, just as one example, Motorola (perhaps the greatest success story in the New China).

Let me quote "Buster," a Senior Operations Manager for Motorola in China from '91 to '95. Paging accounted for 1.5 billion dollars of revenues back in the early nineties and Motorola had 98% of that business. Motorola set up what Buster called "a finder's system," working exclusively through Hong Kong and Taiwanese businessmen. Motorola's contract?- You get 3% if we get what we want but you've got to "lobby" on our behalf. Let me quote Buster directly:

"It was kind of a standard by the time my division got into China. It was clean as a whistle. Just figure 1.5 billion; 3% of 1.5 billion a year went into the government officials pockets. Thanks to Motorola."

When that story- and many, many others- came out in my book did the American Chamber of Commerce in Beijing launch an investigation?

Of course not. Because it's completely unremarkable. The majority of American companies are flouting the Foreign Corrupt Practices Act. Does it impact on how Chinese people view America? Of course it does. A Chinese teacher that I met in Shenzhen, referencing various small-scale bribes by firms like IBM and Dell, called them "American companies with Chinese characteristics."

A second way that American businessmen undermine the image of America is by undermining American security. I'm not even going to get into the military technology transfer issues here- it's too extensive a list. And really, one can make an argument that continued technology transfer from American companies is preferable to China building its own advanced military research and development capability.

But that situation no longer holds. Motorola again: They have outsourced over 25 major research and development plants to China with a total China investment of $10 billion, and 5000 researchers and engineers by 2006. Top of the line facilities, fully equivalent to Motorola's R&D plants in the US. The only difference appears to be that in some cases, they are specializing in R&D that hews to Chinese military objectives: advanced research for the Ministry of Science and Technologies "863" project: 4th generation wireless technology, mobile technologies with commercial and defense applications, semiconductors, and biotech. Company sources have confirmed repeatedly that there is no attempt to do background checks on the Chinese engineers (party membership is considered, if anything, a plus). All the technology goes straight out to the PLA.

Motorola is not the only one doing this: IBM, Intel, Honeywell, Microsoft, General Electric, Lucent.It's a vicious circle: American security, and I would argue, Asian stability, are the big losers.

But there's also a hidden cost. Keep in mind, the Chinese people are patriots. And if the top CEOs of American companies don't care about America, why should they?

There is one area of security where American companies have been extremely diligent: internal Chinese Security, specifically in the Chinese Internet. Now I have spoken extensively on this topic in other forums. So I'm going to confine myself to a single paragraph:

Without North American companies, there would be no Big Brother Internet. Cisco built China's firewall. Yahoo normalized key-word and chat-room censorship. Nortel began the Internet surveillance boom. China's current state security system- it's "Gold Shield"- could not exist without products like Cisco's "policenet," Sun's "Golden Finger" fingerprint recognition system, and Nortel's "100% packet capture system" specifically designed to "catch Falun Gong."

Those are the facts, but what are the effects?

Suppression of speech and political development. Damage to America's strategic interests, values, and its image abroad. Damage to the global cause of democracy and free speech. And incarceration of Chinese people.

Now as important as the Internet is, and I'm happy to return to the topic, let's examine the American mind-set that produces these sorts of results.

First, remember that Americans were changed by the Tiananmen massacre as well. The Westerners who stayed after Tiananmen were expected to exhibit a degree of ideological acquiescence or at least a pretense of optimism about the Chinese future.

Those same Americans, now top business leaders, authors, and even the occasional journalist- still have tremendous ideological influence on expat Beijing.

How does this play out?

Well- it plays out all the time. When a former Congressman doing business in Beijing gives a dinner speech contemptuously referring to Falun Gong practitioners "as a bunch of nuts"- precisely the Chinese Party line of the day (at a time when the death count of Falun Gong practitioners from mental hospitals and rehabilitation camps was already into the hundreds).

It plays out when the world wildlife fund representatives visit China (by any measure, an environmental disaster zone for humans, let alone animals) and the front page of China Daily features the reps sitting in front of a Beijing Olympics banner- the Chinese Party line of the day- literally, hugging pandas.

It plays out when- there are so many examples. Why do they do this stuff? Are expat Americans evil? Are expat Americans stupid?

I don't think so. I think that American expats tend to be well-meaning- and diplomatic. With a handful of notable exceptions, American expats are just acutely aware of Chinese pride- that is, a nationalist sensitivity that is largely defined by the Chinese state.

The modern American way to handle Chinese pride is to maintain a disarming openness and informality, and to tell the truth about China- about 95% of

the time. Then take that all-important 5% (on hot issues such as Taiwan, Falun Gong, Tiananmen, Chinese democracy) and fudge the results.

Perhaps, if they are really eager to please, they follow the Party Line. Or perhaps certain subjects just don't get mentioned. Or bad-China points are carefully balanced with good-China points. Or unattractive elements in China are portrayed as mere "growing pains," as if China was a pimply-but-promising adolescent.

Yet it's a vicious circle. The act of avoiding the 5% that might irritate the Chinese pride, unavoidably, begins to feel patronizing. The Chinese alert level to insult ratchets up. And that inevitable, clammy, sense of Western superiority begins to haunt the conversation.

We cannot ignore the sense of inequality between Americans and Chinese. It is no longer really based on income levels (too many Chinese millionaires around), or national power (China is closing that gap), or even so-called "soft power" such as culture, music and film (you won't find a bored American in Beijing).

The inequality is political- the fact that the Chinese cannot talk, openly and collectively, about the most basic issues: the history of the Communist Party, the Cultural Revolution, Tiananmen, democracy in Taiwan, race issues, and faith.

But by accepting this state of affairs, both parties to the conversation, American and Chinese, tacitly agree that the vast majority of the Chinese people are to be infantilized.

They should be loved, flattered, managed- one should avoid "hurting the feelings of the Chinese people," as the Communist Party leaders like to say, but most of all, they should not be trusted on their own.

Expat or not, I reject that New China paradigm.

I sense that power, a very sophisticated understanding of power and justice, is the lifeblood of Chinese culture. I feel that the surface of the Chinese character- caricatured as one of shrewdness and business moxie- masks a deep, almost spiritual, sense of historical tragedy. And to my mind, the opportunity cost of suppressing Chinese political instincts and liberated expression is just as great a loss as the suppression of the Chinese capitalist and entrepreneurial spirit under Mao.

And by the way, all the elements that I have just mentioned can be found in the "Nine Commentaries".

Now, to mitigate the belief that the Chinese people should not engage in politics or self-government, we offer the sop that this is a temporary measure: every economic restriction lifted, every step that China takes towards capitalism, every Mao suit discarded, and every jiao added to a Chinese pocket is at least a half-step towards a modern, responsible, and democratic China. American CEOs give the impression that they can make their investments and then lie back as if on a cruise ship headed inexorably

toward a great port with all the amenities: a US-Chinese co-prosperity sphere, champagne toasts to the end of history, and a New China that (for all their lip service about 5000 years of Chinese culture) will actually look a lot like the America that they left behind.

I don't reject this New China paradigm outright. No one can predict China's future. But my book centers around one simple question: What if the trends of at least a decade don't support the theory? And how are Americans shaping those trends?

Add to this one more question, if the mass defections from the Communist Party lead to crisis, and in the worst case, another Tiananmen-style crackdown, this time, can we, as American expats, really say we bear no responsibility?

Fortunately for the expat conscience, they don't have to consider that question just yet. The Chinese people are still, in 2005, on a forced march.

But the reaction to the Nine Commentaries suggests that they don't have to be. If significant segments of the Chinese people reject the idea that hyper-nationalism and internal political controls are the only way to ensure continued growth, they could break the spell of willful ignorance, could break the controls on the Internet, and could break the Communist Party. And like everything else in China, it could happen very, very quickly.

In the book, I premised that "irate overtaxed peasants with Internet-enabled cell phones ten years from now" have the power to change China. Since I wrote those words, with every Chinese citizen who renounces their Communist Party membership and begins to embrace democratic principles, my belief in that statement has only grown stronger.

I want to close with this thought: The rise of China is the most exciting and awe-inspiring event of our time. I felt it every moment I was in Beijing. And I fully expect that my son will grow up in a world where China is a superpower. But none of us- American or Chinese - should have to dread that prospect.

I want to congratulate The Epoch Times for creating a place of freedom, faith, and inquiry. A place where controversial words don't get edited out, and passion is respected. I hope that our discussion today will continue in that spirit. Thank you.

1720. Communist Party Injected "Painkiller" Funds Into Stock Market

Newsgroup: rec.radio.shortwave
Date: 2005-06-20 19:54:55 UTC
From: Hu Jintao <HuJintao@ccp.gov.cn>
Message-ID: <11be7pipdt6ju7a@corp.supernews.com>
Source record: 25208

Shanghai and Shenzhen stock markets have sky-rocketed for three days following June 8, with Mainland media and Hong Kong media giving two totally different explanations. The Mainland media's harmonious chorus shows signs of the Central government's directive behind the scenes.

On June 6, the China Stock Market Index dropped below the 1,000 point speculator's psychological support level, showing the lowest record of the past 8 years. Two days later, on June 8, Shanghai and Shenzhen stock markets underwent a big change, with the Shanghai A-share composite index rising 84 points, or 8.21%, at the end of the day, ending at 1,115.5 points. This is the highest growth in a single day since June 24, 2002. A-share turnover reached 18.7 billion RMB ($US2.25 billion); over 1.5 times the 7.3 billion RMB (US$.882 million) of June 7.

The reason for the 2002 stock market jump was that the State Council decided to cease the policy of stock market "state-owned shares reduction," with the decision setting off a 9.3% rise. Now, nearly three years later, the reasons for the China stock market's dramatic changes are that information has been passed around that the People's Bank and China Securities Regulatory Commission (CSRC) are researching a serious plan to rescue the stock market, including pumping in 100 billion RMB (US$12 billion) to rescue dealers with financial problems. Last week the CSRC also announced six rescue actions, including permission to list companies' stock repurchase; permission to list markets for purchasing stock funds; encouraging other organizations to enter the stock market; tax benefits for dividends; establishing investor protection funds, and approval for commercial banks to set up a fund management company.

Mainland China media made positive comments about this stock market bounce-back. Xinhua net published an article named "Long Expected Rain Arrives on the Stock Market" the second day after the stock market bounced back. People's Daily online described the news as "On the 8th June, Shanghai and Shenzhen stock markets had an overall rise; stocks are growing, investors are chuckling." The People's Daily print version used "How Shanghai and Shenzhen Stock Markets Bounced Back from a Desperate Situation" as the name of its article. All of these reports touted the change as great news.

To the contrary, both of Hong Kong's important financial newspapers gave negative reports on this bounce-back. Hong Kong Economic Journal and Hong Kong Economic Times respectively published editorial articles named "Mainland Stock Markets Have a Lot of Shortcomings; Hong Kong's Position will be Difficult to Replace" and "Mainland Stock Market Suddenly Changes from 'Zhu Market' to 'Wen Market'" ('Zhu Market' refers to China's former prime minister, Zhu Rongji's policy-supported market, and 'Wen Market' means

China's current prime minister, Wen Jiabao's policy-supported market). The articles mainly pointed out the shortcomings of the Mainland stock market in that it does not operate according to market economy principles, but instead operate according to administrative measures. Some analysts even believe that the bounce-back was just the effect of the Chinese government having injected funds in the form of a "painkiller" into the market.

Associate Director of Hong Kong Securities Company Ltd Research Department, Kenny Tang, said, "Actually, the Chinese government's stock rescuing actions expected by the Mainland stock market are not breaking through policies, it is just moving capital into the market. It cannot improve the Mainland stock market's structural problem from the roots, and this stock market bounce-back cannot last." He also pointed out that investors lack confidence in the Mainland stock market and too many forged account books have caused a long-term bear market. Besides that, the Mainland stock market has many structural problems, including the internal control system of dealers not being strict enough, not having enough outside supervision, and too many cases of dealers embezzling customers' money.

In 2001, the Mainland stock market reached a summit on the high tide of the global hi-tech network, and on June 13 the Shanghai Composite Index reached an unprecedented 2,242 points. But, after market's end that day, China's State Council announced their state-owned shares reduction plan, causing market concern that the circulation of a large volume of state-owned shares would collapse the market. Since then the Mainland stock market has begun its four- year-long bear market.

Prior to April 29, 2005, the CSRC brought up the "state-owned shares reduction" again, and caused the Shanghai Stock Market to drop below 1,000 points. According to the information published by the CSRC, calculated at the end of trading on May 27, 2005, the negotiable market value of the Shanghai Stock Market is around 624 billion RMB (US$75 billion), and the negotiable market value of the Shenzhen Stock Market is around 366 billion RMB (US$44 billion). The total of the two markets is around 990 billion RMB ($119). Compared with over 1.886 trillion RMB ($US0.22 trillion) in the peak period of June 2001, it has dropped nearly 896 billion RMB (US$108.25 billion).

According to above information, it is still too early to say whether the Mainland stock market bounce-back is as the Mainland media have described it. However, Mainland investors have experienced the market value disappearance of nearly 1 trillion RMB in the past, so is it so easy for the media to persuade them that the "long expected rain" has arrived?

Dan, when I was in college (a remote small university), I had my old Hallicrafters SX-28 with me. The rain gutter downspout and roof flashing were common and ALL copper, and just outside my dormitory window. I hooked my antenna wire to it and the results were excellent. I wish I hadn't sold that radio but it got me through college.

A hoax perhaps, but the word ''Exclusive'' may be a clue as to why no
one besides us knows about it. Why don't you ask these people if it's
a hoax:

SW started dying as an effective medium in Latin America in the 60's, and there has been a reduction of the number of stations on SW of about 80% since then with very few left... SW receivers are seldom seen now.

Which explains why it seems that half the SW signals listenable in Latin America are venagelical religious broadcasters and very little news of any kind is available.

A blog with a "tip" from probably a disgruntled employee. And it's not like
Fox News were the ones spraying the crap now was it. The building mgmt
people are to blame not Fox. Any normal person can see that.

Just a bit of trivia to add to this: I bought another S350 and it
arrived today, and I noticed that this one is pewter rather than
silver. I wonder how long this change has been implemented? I also
noticed that drift was 1 KHz at most at start-up and then disappeared
totally after about 20-30 Min.

I feel the same way whenever I hear our beloved dictator use the term
''spread democracy''. It may as well be some greasy yuck in his
fevered brain; he certainly doesn't have any kind of grasp of its
true meaning.

Apparently, FNC management refused to stop the practice, which had
been going-on for some time.

''According to the tipster, FNC management claims that the incident
was isolated. But the tipster, who is apparently a longtime employee,
characterized that as "bullshit." "The same guys have been spraying
the same stuff for years and no one would listen when people
complained it was making people sick," the e-mail said.''

Just another Neo-Communist front organization.

The Nation Institute: Non-profit(?) entity closely linked to for-profit left-wing magazine The Nation magazine, whose book publishing affiliate features titles like the I Hate Republicans Reader; The Bush-Hater's Handbook: A Guide to the Most Appalling Presidency of the Past 100 Years; and the I Hate George W. Bush Reader. This tax-exempt entity is used to increase the profits of The Nation as a business, an abuse of the tax-laws which The Nation will probably not care to investigate.

http://www.discoverthenetwork.com/groupProfile.asp?grpid=6780

The Nation: The oldest and most leftwing of all popular American weekly magazines.
Supported the Russian Revolution and was first U.S. magazine to publish the Soviet Constitution
Opposed America's Cold War policies after World War II and generally supported the Communist bloc
Opposed the war in Vietnam and both Gulf Wars
Was saved from bankruptcy by current owners Victor Navasky, Katrina vanden Heuvel, actor Paul Newman, novelist E.L. Doctorow, former Corporation for Public Broadcasting chairman Alan Sagner, computer software mogul Peter Norton, and other "progressive" investors.

http://www.discoverthenetwork.com/groupProfile.asp?grpid=6779

"progressive" is a code word for Neo-Communist

Discover The Neo-COM network - http://www.DiscoverTheNetwork.com

1739. Numbers station on 9985 khz?

Newsgroup: rec.radio.shortwave
Date: 2005-06-21 02:08:11 UTC
From: sdaniel13@nyc.rr.com
Message-ID: <1119319691.021729.51660@z14g2000cwz.googlegroups.com>
Source record: 25227

I heard an odd numbers station on 9985 earlier this evening. Its transmission ended at 10:00pm EST. I'm not good at identifying languages, but it wasn't Spanish. It sounded like it might be Arabic, or perhaps Eastern European. I looked for info on this station, but haven't turned up anything yet.

Any of you numbers officionados familiar with this one?

Steve

1740. Re: DE31 Active Loop Antenna mini review. If you're one of the MANY Chinese made radio haters skip this!

Jim, thanks for the review.

Considering the suction cup "installation" system, is there a real way to rotate the antenna to use the antenna's directionality to get good nulls?

I have one of Ed's (Edek) Torus Tuner loop antenna's, which I find can do wonders! The only problem with it, is that it's not too portable! So, I'm looking for something to use with my SW100 on the road.

When I mentioned to Ed that my SW100 has power output via the antenna jack (to power the antenna which comes with the SW100s), he changed his loop design, so that the DC was blocked. I wonder what the situation is with the Degen model???

As an aside, does anyone know of Ed's situation?

Thanks

You might also look at the negative feedback he's given.

Don't think I'd knowingly bid on one of his auctions.

Doesn't appear to be the case. I guess I'm not sure what sort of conduct one would have to pull to get kicked off Ebay.

Now that we've (once again) established that shortwave is dead, let's
go back to discussing all the cool stuff we appear to be collectively
hallucinating as we tune around the shortwave bands.

That was quick. How was it shipped and how much did the shipping and
repair cost? Mine is working well but the display is getting dim in
places. The display is readable, it's a cosmetic thing. I was also
thinking of getting some better filters for it. What do you recommend
for program listening?

Yeah Mike, take a few lessons from Lucky on how to whine. From Lucky's
standpoint a bit of rudness that this guy displays is a major crime and
national shame. A small dent in a power supply is akin to a disaster
like the Titanic for Lucky. Lucky lives a sheltered life.

For AM mode I like a filtronetics marked 6.8khz that reads 6.1

For nice fidelity Sideband, I like a filtronetics marked 3.24khz that
reads 2.9

Both are crystal filters originally intended for the Racal 6790/gm.

They have very steep skirts, and the radio sounds beautiful with them.

jamulc wrote:

Hello folks,

I'm interested powering my Drake R8B from a gel cell for outdoor use.
The use of gel cells is something I'm totally new to, so I was
wondering if perhaps some of you out there who may have some
knowledge/experience with this sorta thing might be able to give me
some pointers as to
* where I might look to find a fair deal on a gel cell
* what types of models/brands are worth consideration
* what might be required in order to hook the Drake up to a gel cell
for proper powering (wires and what-not; admittedly I'm new to
this...up to now, I've only powered the Drake from the power outlet in
the wall)
I would need something that would give me at least 20 hours or so of
usage before requiring recharge, and I'm only looking to power the R8B
with the unit (not any other accessories or the like).
Any help would be much appreciated.

jamulc

How much does the radio draw?
For example my R2000 draws about 300mA or 0.3 Amps.
For it to run 20hours, I would need at least 0.3X20, or "6 amp hours".
Given that gell cell makers figure the end point at a lower voltage
then
the r2000 will really operate from, I need a battery somewhat larger.
I have operated for slightly longer then 24Hrs from a 14A/H gell cell.

My primary backup batterey is a Pansonic 20A/H gell cell.
I have a 1A fuse in the +/positive leg.

I would first try contacting local alarm companies. They have to swap
out
farily new batteries from "high value" clients at regular peroids. You
wouldn't
want a swanky store to get burgeled because the battery went flat.

A 20Hr gell cell is HEAVY. It is a small lead acid battery, the acid is
gelled, so don't plan toting this sucker several miles into the woods.
I used to take my R2000 for picnics, but it is rough on desk top radios
to be handled "roughly" . I had a travel case of 3/8" plywood with foam

cushions, but I think the jarring was part or the cause for some failed
solder connections. I know carry a DX398, no nearly the radio, but a

LOT smaller, and will run or days from a 6A/Hr 6V gell cell, or even operate from a simple PV array I built from scalvaged "solar night lights".

It was shipped UPS, and AOR UK told me they prefer UPS as this apparently simplifies things with customs. I probably would not have shipped it to them for a repair that was primarily cosmetic because the shipping is expensive. It's impossible to say exactly what it would cost you, since the cost is a function not only of the weight of the package but also of its dimensions. If you use a large box with lots and lots of styrofoam, it's going to cost you--and it might cost more coming from California. I think you should expect it to run at least a few hundred bucks, though, there and back, unless you cut corners. USPS might be a little cheaper. If you visit the UPS homepage you can calculate costs using different measurements and points of origin. I only did it because the repair was fairly serious and I really like the receiver, its custom filters, etc.

It's hard for me to recommend filters for this receiver. Mine is decked out entirely with Collins filters. This wouldn't be to everyone's taste, but I like it. However, I've never listened to this receiver with any other kinds of filters, so I can't make an informed comparison.

My best guess is that it was station S10D. It was a female voice and it was broadcast in AM mode. I only caught the last few minutes of the transmission....otherwise I'd have recorded it.

The R8B draws a lot of current...2 amps. So, he's going to need a serious battery. For 20 hours of usage between charges, he'll need a 40A/H battery if he's to avoid 'deep discharge'. That's going to be heavy, and expensive.

That whopping price increase sure moves it out of the volksradio
league. It's appeal was good audio and decent performance on all bands
for less than $100.00.

SIRIUS Satellite Radio to Broadcast BBC's Radio 1
Tuesday June 21, 8:00 am ET
- Popular U.K. music channel to debut on SIRIUS this summer
- Subscribers will hear channel in its entirety

NEW YORK, June 21 /PRNewswire-FirstCall/ -- SIRIUS Satellite Radio announced today an agreement to broadcast the British Broadcasting Corporation's popular modern music channel Radio 1. The agreement, with BBC Radio International, part of the U.K. broadcaster's commercial arm BBC Worldwide, will bring many Americans their first opportunity to listen to the influential and highly acclaimed radio channel.
(Logo: http://www.newscom.com/cgi-bin/prnh/19991118/NYTH125)

BBC Radio 1 will be broadcast with a time-shift on SIRIUS, so that most Americans can enjoy the channel's lineup as it was intended -- with Chris Moyles' Breakfast Show in the morning, Scott Mill's show in the afternoon, and kicking off the weekend with Pete Tong's Friday night Essential Selection.

"Radio 1 on SIRIUS will be a unique entertainment offering unmatched in the U.S.," said Scott Greenstein, SIRIUS President of Entertainment and Sports. "It is renowned for its support of up-and-coming British artists, and reflects the enormously vibrant British music scene in its daily programming and special events. SIRIUS subscribers will soon be able to hear Radio 1's cutting-edge music in their cars, homes or other locations."

BBC Radio 1 plays a mix of current pop, rock, R&B and hip-hop music, and extensively covers music events taking place worldwide. BBC Radio 1 features many exclusive interviews, as well as live broadcasts of performances and unique studio sets from some of the hottest artists on the international music scene. The channel has a weekly audience of more than 12 million in the U.K.*, and is consistently recognized for the quality of its on-air hosts and the information and entertainment it presents.

David Moody, Director of Strategy and Business Development at BBC Worldwide, said: "We're delighted to be working with SIRIUS on adding one of the U.K.'s most established radio brands to its high quality radio line-up. The arrangement benefits from Radio 1's strong programming and brand combined with SIRIUS' cutting edge delivery technology and established U.S. audience. We look forward to exploring further opportunities together in the future."

BBC's Radio 1 will be made available on SIRIUS later this summer, and joins an exciting lineup of exclusive programming on SIRIUS. For more information, visit http://www.sirius.com.

To find out more about BBC Radio 1's lineup, visit http://www.bbc.co.uk/radio1.

At that current level it isn't really practical.
Like you said a 40A gell cell is going to be HEAVY.
Unless he is at home, or in a camper he needs to get a
portable SW that will use less power.

I think the R8b draws slightly less than 2amps, but I agree it'll take a heavy battery.

One of the things adding to the power requirements of the R8b is they apparently use 56 green LEDs to backlight the display. A while back, Starman mentioned replacing those green leds with four white ones. jamulc might want to check with him to see how this affected power consumption. I'm sure Starman would be happy to tell folks how he did it. As I recall, he thought the modified backlight gave a nicer looking display too.

The AOR 7030+ is more practical to run on batteries - It draws about .4 amps.

When BBC World Service eliminated shortwave to U.S./Canada/Australia/NZ (of course, shortwave signals don't just end up where they are "supposed" to) they said that people in these areas could receive BBC WS by other means such as the 'net and domestic radio relays.

Well, local radio relay of the BBC WS here in NYC is mostly after midnight and that's better than a lot of other places.

And, if you use the 'net, you find suddenly that if you liked one kind of programming on BBC WS you may be able to get more of the kind of programming you like on one of the domestic service.

For example, if I want to hear BBC comedies, I listen on the 'net to Radio 4 or the BBC7 satellite network which reruns some of the old ones like the Goons, Hancock's Half Hour and I'm Sorry I'll Read That Again.

Radio 4 has the final episode of the new series of Hitchhiker's Guide to the Galaxy Tuesday (today) at 1730 GMT (6:30 P.M. British summer time) repeated Thursday at 2200 GMT (11:30 P.M. BST) with listen on demand available on the website.

I'm not sure that Radio 1 (current pop) is the best choice for a satellite broadcast; it seems to me that plenty of Radio 1-type programming is available on free over-the-air radio in the U.S. and on other Sirius channels.

In fact, BBC Radio 1 started because there were offshore pirates because there was not enough U.S.-type rock broadcasting on the BBC for popular taste.

However, it would be interesting if BBC WS ended up having a smaller audience in the U.S. (and possibly Canada) than one of the domestic BBC radio services.

By the way, if you want to hear what Radio 1 sounds like, try (assuming Windoze with a normal RA player installation)

```
"c:\Program Files\Real\RealPlayer\realplay.exe"

Hi BuzzyGirl

Ebay is a microcosm of our country and basically the world. Money corrupts. If money didn't corrupt, Ebay would have not allowed Radio Mart back in business with PRIVATE AUCTIONS to boot. In other words, make us money and we'll even help you cover your tracks.

It's so so obvious this seller shouldn't be allowed to do business with the general public. But, "Show me the money" and you can tell whoever you want whatever you want. In other words "we have no morals either" only "morals that fall under legalities"

Our societies won't change until money is no longer the form for the exchanging of actions/services. If you really break it down, money is actually energy. It's potenial energy that is represented by green pieces of paper. 100 units of this energy {$100} can be exchanged for the energy that went into building a bicycle for instance.

The more energy you control, the more energy you can buy and control. So, until our societies come out with a different way to define energy and it's exchange, we will live in a corrupt world and society.

That will be the downfall of mankind. His own greed and hunger for more energy to have and control. Like it's said, money is the root of all evil.

Lucky

If this is all you're able to receive, then there *is* something wrong
with your antenna. Why don't you describe your setup?

Steve

People always try and hold on to 'old technology' - myself included...I personally think the BBC was wise to pull the plug when it did, instead of sinking more money into a sinking ship...

Shortwave, Ham Radio, CB, etc. (all of which I still use and enjoy) - are just buggy whips - soon to be outdated and displaced - except for the few who cling to them for their own personal satisfaction - not for real communication.

YMMV

I have 3 antennas. They all work fine, for what they are.

My ICOM R-75 is fed by a 120' Horizontal L,

My Drake R8B is fed by a 50' Wire driving 100' of RG-8U via Palomar
''MLB-1'' UnUn.

My Drake SW2 is fed by an MFJ-1024, also through 100' of RG-8U

I can get AIR on the 2 wire antennas; I don't think I've tried on the
SW2 (my bedside radio; now that I have the BBC World Service on
satellite 24/7, I just use the SW2 for MW most of the time).

I mainly use my 2 big radios for UTEs. I like having friends, and
normal people are sort of put-off by loud flanging broadcasts from the
Azores or the Carribbean or whatever.

There are two kinds of dead:

1) Doesn't make economic sense to broadcast (David's definition).

2) Doesn't exist (your definition)

Plenty of sw broadcasters do not depend on economic return. They
either have a "mission" themselves, sell time to someone with a
"mission", or are supported by a government (with a mission). It's no
longer like 1940 when you could hear US baseball games in Spanish,
sponsored by Colgate-Palmolive, on shortwave.

Does anyone know what the specs are for the wide and narrow filters, i.e. the bandwidth and shape factors? I love this radio but the narrow filter doesn't seem to make very much of a difference to my ears, as far as interference rejection goes. Has anyone ever replaced either filter with good results, and what filter did you use? Thanks!

Killen Convicted of Manslaughter in 1964 Slayings (Update4)

June 21 (Bloomberg) -- Edgar Ray Killen, an 80-year-old former preacher, was convicted of manslaughter in the 1964 deaths of three civil-rights workers in Mississippi after jurors rejected murder charges pressed by prosecutors.

Killen was accused of organizing Ku Klux Klan members who ambushed and killed James Chaney, Andrew Goodman and Michael Schwerner outside Philadelphia, Mississippi. State Attorney General Jim Hood won Killen's indictment in January, reviving the case after pleas from the victims' relatives. The verdict comes on the 41st anniversary of the trio's disappearance. ``I hope that this conviction helps to shed some light on what has happened in this state,'' Rita Bender, 63, Schwerner's widow, said at a press conference following the verdict. ``I see it as a very important first step.''

The deaths helped galvanize support for the movement to win voting rights for blacks and became the subject of the 1988 film ``Mississippi Burning.'' Killen's attorneys acknowledged for the first time during the trial that he had belonged to the Klan. A federal jury found in 1967 that the white-supremacist group had ordered Schwerner's death.

Jurors told Judge Marcus Gordon late yesterday that they were split 6-6 on murder charges after the first few hours of deliberations. Killen faces a maximum of 20 years in prison on each of the three manslaughter counts. Murder convictions would have carried potential life sentences.

Hood lauded the verdict as ``justice for all in Mississippi.'' The attorney general had attempted to bring to trial the eight survivors of 18 men accused in 1967 of taking part in the killings. Of those still alive, Killen was the only one indicted. `This murder was not sanctioned by God,'' Hood said. ``It was sanctioned by evil men and one of them will have to pay for that crime now.''

Killen who suffers from osteoarthritis, was remanded to the custody of the sheriff's department after the verdict and taken from the courtroom in a wheelchair.

``He'll spend the rest of his life in jail,'' said Derrick Johnson, president of the Mississippi NAACP.

Gordon told spectators to remain quiet before the verdict, noting that it came on the anniversary of the disappearance of the three civil-rights workers, who were in Mississippi to register black voters. The trial in Philadelphia, a town of about 7,300 people, attracted international media coverage. ``There's always a lot of feeling and emotion in the trial of any case, and certainly of a case such as this,'' Gordon said, warning spectators that about 17 uniformed state troopers and local police officers were on guard to quell outbursts.

The three victims had been arrested by police and released, then caught and killed by Klansmen, according to investigators. Chaney, 21, who was black, was beaten to death. Goodman, 20, and Schwerner, 24, both white, were shot. Their bodies were found after a 44-day search, buried in an earthen dam. Hood told jurors that Killen at the time led a new Klan chapter in nearby Meridian. Killen rounded up volunteers for a church-burning that Schwerner's group was investigating and gave orders on the day of the ambush, including a command to buy gloves, Hood said.

``All things considered, I think the compromise of three counts of manslaughter was the best that we can hope for,'' said Connie Curry, 70, a writer and filmmaker who met Schwerner while spending the summer of 1964 in Jackson, Mississippi, helping to desegregate schools. ``It's good for the soul of this country to have people brought to justice, even 40 or 50 years later.''

One of Killen's attorneys, Mitchell Moran, argued during the trial that his client was only a ``bystander'' in the Klan. Moran instead blamed the murders on former Imperial Wizard Sam Bowers, now serving a life sentence for a 1966 firebombing that killed civil-rights activist Vernon Dahmer. Killen was among 18 men charged in the 1967 federal case with violating the activists' civil rights. Seven were convicted, including Bowers, and Killen's case ended in a hung jury after one juror refused to convict a preacher. The other 10, including the county sheriff, were acquitted. ``This is the beginning of the healing of Mississippi,'' said Deborah Owen, a Philadelphia resident. ``For once, the state of

Mississippi says, `We acknowledge the past.'''

ObTredneckracistsandkukluxklansmengowild: If this tasty news was not
bad enough, the bankrupt Winn-Dixie said today
it will close about a-third of its stores (including all of
its Virginia stores) with a net loss of 22,000 of 78,000 jobs.

I figure with both of these stories hitting on the same day should
be just enuf to put a whole lot of ignorant white trailer trash poebuckers
over-the-edge in the comming days....

Is there a page that lists some of the Pana models??

I saw one on the flea market, that had an AM antenna
that could be turned, a signal meter, I guess narrow wide too...

Marc

If you can really hear these stations, why does it irritate you so much to find out that others hear them as well, via their shortwave receivers? And didn't you earlier say that, because you live out West, you can't hear very much?

I think you need to get your story straight.

What did you hear?

R. Australia is bullshit these days, just rebroadcasts of domestic radio (although Nocturnes is the best music show on the radio but at 8:30 local on Saturday morning not too convenient. Better on the Web). RNZI's nice, but just when you start getting in the habit of listening to them, their 1962 transmitter craps out for 6 months.

Fucking Paul Crouch? Japan? China? Voice of the Andes? Woohoo!

Forgive me for making light of a horrible situation, but what's your point?
You just might be able to take him at his word.

On a lighter note, I hear beerbarrel claims that he once had both of the
Olson twins, at the same time.

Of course, that was before they were famous.

Let's analyze this, shall we?

Mike told beerbarrel that his mother was no longer with us. We all heard it, and beerbarrel knows that we did. Therefore we know, and he knows that we do as well, that the second half of his statement was a lie. Since that blatantly false second statement was designed to bolster the first statement, that being that he's not gay, and since he knows that we know it to be false, we ought to be able to assume that in fact the first statement is false as well, and that he wants us to know that he is in fact gay. Personally, I'd like to commend him for his courage in coming out.

But perhaps the blatant lie wasn't one after all. If we assume that beerbarrel is in fact telling the truth, and that he's not gay, then he did in fact have congress with a dead woman last night.

So...beerbarrel....which is it?

In light of this latest post, maybe we should change his name to "bier"barrel.

P.S. to beerbarrel:

Here's a link for the big word, bonehead:

http://dictionary.reference.com/search?q=bier

Looks like it is called "Digital transfer"

"Digital transfers are printed on our high speed digital printing press. They are as durable as screen printing, but offer more detail. Digital transfers use heat to create a bond between the resin and the t-shirt locking the ink between the two layers. Digital transfers have a slight plastic feel when first worn, however, this feel will diminish after washing."

willismat wrote:

Does anyone know what the specs are for the wide and narrow filters,
i.e. the bandwidth and shape factors? I love this radio but the narrow
filter doesn't seem to make very much of a difference to my ears, as
far as interference rejection goes. Has anyone ever replaced either
filter with good results, and what filter did you use? Thanks!

I once checked the filters, but it was back in the early
1980s. I can remember they were both rather wide.
I thought about trying to replace them, but the tunning
wasn't fine enough and the receiver wasn't stable
enough for the effort.
It had great sound on FM and good sound quality,
in spite of the over wide fitlers, on AM an SW. I loaned
mine to a friend and it was destroyed along with her
car.
One simple mod you might want to consider is to add
a 7806 linear regulator, with a switch hidden in the
battery compartment in the little space intended for
the earphone. It was a fun radio to take on picnics
and camping. I have often thought of buying another
one, but I have "too" many radios. Or at least not
enough space to stash many more.

I think the RF200 had a "stnadard" 455KHz IF, and if
so, then scalvaged CB IF filters ought to work. The
RF2200 is not at all crowded inside. Good luck on
your quest. A good"cheap" source of narrow filters
can be the lowly CB. I picked up several at the local
thrift stores for next to nothing when they are missing
the mics. I even got a couple of SSB units that had
nice, narrow ceramic filters.
Next to nothing means less then 5$.

Garage sales are another good source. It helps if your
wife has friends who think garage sales are a Holy
mandate. I have a set deal, buy me all the CBs you find
for $5 or less. I help with their home PCs os it balances
out.

The africoons were apparently celebrating in Va in advance
of the verdict over the weekend:

Vandals Spray Black Paint Over Faces In Confederate Monument
2:39 pm EDT June 21, 2005

PORTSMOUTH, Va. -- Vandals damaged the city's monument
to Confederate soldiers by spraying black paint over the faces
of statues representing four white rebel fighters.
The damage was discovered during the weekend at the
memorial, which consists of a 56-foot-tall granite pillar surrounded
by four metal figures representing the navy, cavalry, infantry and
artillery branches of the Confederate military. All are white.

"I think the Civil War is still sensitive to a segment of the South,"
Nancy Perry, the city's museum director, said Tuesday.
Police had made no arrests. A metal conservator could begin
work to clean up the statues this weekend.
The monument, dedicated in 1893 and listed on the National Register
of Historic Places, was scheduled for an $80,000 restoration this year.

Oh well, I guess the few remaining Va Klansmen shouldn't be
too upset as they probably would enjoy a good Minstrel Show
in 2005 and thus could think of their heroes in bronze as wearin
blackface?

I guess it means that Jesus gave GWB the OK to use depleted uranium in
Iraq.

There is now -no problem- finding WMD's in Iraq as half the country is
now radioactive, and will be so for the next 5000 Years or so as a
direct result of the US intervention for oil and 'western 3rd crusader
honor'.

How sweet.

They don't appear to have a web site. Do you have part numbers on the
6.8 KHz filter? Another question is what did it take to install it in
the 7030+?

Sounds to expensive to send it unless it is not working. No one in the
USA will work on it?

The American Anti-Necrophilia Association will be happy to get that.

An old deviant necrophiliac named Fort
When asked of his favourite sport,
replied with disdain, "In the sexual heat,
for a real treat, nothing beats dead meat,
and I'm going to hell sighing Vive La Morte"

There once was a deviate named Fort,
Who ate six bushels of maggots ala Morte,
After dinner he turned to necrophilia,
His member covered with wormy hernia,
he was too stupefied to think of a retort.

Compared this monster, Cuhulin now seems like a real down home good ol' boy.
Despite his affinity for the barnyard playmates.

One of cuhulin's charms was that no matter how totally ignorant he was, you
always had the feeling that one day, one glorious day, he'd actually say
something clever.

Beerbarrel doesn't even have that much promise.

Oh dear...Is there no end to his debauchery? That makes the 'man' a monster of the first degree. I feel his kind should be castrated immediately before being ejected from the military. That would indeed be providing real homeland security. I don't feel my family members, both alive and deceased, are safe with the likes of him running loose.

It's a Mom and apple pie thing. I'm sure nobody would mind an 'after the fact' slice of the knife.

I found a web site by them <http://www.filtro.net>

Here is a page with 455KHz centered crystal filters among others
http://www.filtro.net/products/filters/filters.asp

FN-860W 6 KHz/3 dB - 19 KHz/60 dB
FN-169W 3 KHz/3 dB - 6.2 KHz/60 dB

They don't have any 455 KHz ceramics.

Yes, I personally wouldn't go to all that trouble and expense for something cosmetic.

Before sending mine off to AOR UK, I called Universal to see if anyone there would touch it, but no dice. They said they repair the ones they sell, but no others. And to be honest, with all due respect to Universal, I understand that repairing the 7030+ is quite tricky. The folks at AOR UK told me that, when they were selling the 7030+ in the US, the technicians at AOR USA were not very good at repairing them. I don't know why the 7030+ would be more difficult to repair than any other high-end consumer grade receiver, but that's what I was told.

>

The web site is:

<http://www.filtro.net/>

I couldn't find the ones I have on their web site, so they may have been
done for a specific contract. Getting a non production bandwidth from
them may or may not be a big deal.

Back when I had the 6790/gm I ran into a small supply of the 3.24khz
symmetrical filters, and jumped on them because I love the 3.2khz

bandwidth on my Harris, and they're for a common IF frequency.

When I got the 7030+ I installed one. After seeing how well it performed, I started hunting down 6790 filters suitable for AM. Along the way I found the McCoy 6khz mechanical filter for the 6790 was an impedance mismatch and wouldn't read.

I'll need to open up my radio to track down the part number for the 6.8khz filter - I've got an extra layer of case to deal with as my radio is installed in an equipment case with battery packs and so forth to make it "portable".

But I'll see if I can get it for you tomorrow.

I used some angle aluminum and flat stock to make a shelf for the filters that sits on the inside back wall of the radio. AOR thoughtfully provided nicely spaced holes for attaching it to the back panel. I used stuff I had in stock.

The filters are on their side, and are held with velcro. I used RG174 to feed the terminals into the holes you'd solder extra filters into on the main PC board.

I'll try to remember to shoot some pictures while I've got it open.

The reason these filters sound so good is they're a little wide with very steep skirts. (1:1.33 on the sideband one)

Regards,

Mark

Oh, there's an end to it. Two inches away from where it begins would be my
guess.

No. We've invested money in him, and we need some sort of return on it.
There has to be a use for him. He could be used as a (sub) human shield for
the real men in the military, for instance. Of course, castration would have
no effect on his effectiveness, so that part of your suggestion can still go
ahead. The small amount of missing mass wouldn't block more than a BB
anyway.

Yeah, I found their web site after my previous post. Usenet does not work in real time. Sometimes faster than other times. Ignore my other post where I found it.

Please don't take your radio apart on my account, I'll figure out what I need to get when I get motivated. I do appreciate the offer for you to disassemble your radio just to find this out for me.

I have one more question about the filter option. The radio is supposed to take six filters and four are provided. I assume that their are two open positions on the main board and that they are for small sized filters. AOR has an optional filter board and as long as I want to install two more small type filters I further assume that I don't need to buy this daughter filter board. I expect that this optional daughter filter board is for the large mechanical filters.

The radio pc board has two spaces with holes and contacts for a few
different small cased filters. You'll need to remove the top and bottom
covers of the radio to install them.

I've never seen their filter daughter board, but think they are for
larger filters. I don't know if they'll hold the filters I'm using.

It's real life. People live in fear most of their lives;
fear of losing their job, fear of not finding a job,
fear of crime, fear of taxes, fear of that big semi
on the highway not seeing you and moving over
into your lane, fear of your sick kid being really
sick, fear of that big unexpected expense wiping
out your cash reserves. Most people simply deal
with it, because there's not much you can do. If
you're free from fear, you either have everything
taken care of for you, or you are incredibly naive.

I've used several of the Panasonic RF-2xxx series. My impression was that the filter positions were best described as wide and wider with outward curving skirts. They were useful in AM mode but were too wide for ssb in the crowded ham bands. A good announcer on a shortwave station in the clear sounds great in the wide position and pretty darned good in narrow.

The downside to installing a narrow communications filter is that you could compromise sound quality on AM broadcasts.

If it were me I would enjoy the 2200 for what it is and find a good tabletop with better filters and the requisite stability to handle ssb.

This is a logically good argument, but it falls short when portability
comes into play.

The whole reason why radio (per se; not specifically shortwave)
remains so popular despite TV and the Internet is because you can take
a portable radio with you wherever you go; into the garden, in your
car, in the bathroom, on holiday, in a tent, in a caravan (trailer),
in a motorhome...

I can't do this with a computer. Firstly a laptop costs twenty or more
times more money than a radio, secondly the battery life is
considerably less, but mostly there just isn't universal affordable
wifi or mobile broadband yet.

I used to be able to take a small shortwave whip-antenna radio on
holiday to America and listen to the BBC back home. Now I can't.

Now either I have to carry around thirty metres of random wire and
some very detailed frequency charts, or I have to lug my laptop which
can't stay away from the mains electricty for more than 3 hours and
requires me to subscribe to expensive mobile internet connections (or
worse, expose my security to the prospect of hijacking someone else's
open network).

I can't overstate how pissed off I am about this. The BBC made their
overseas radio services difficult, expensive and non-portable. I miss
my radio.

And to top it all, my TV licence, paying the BBC, has gone up again!
If it wasn't for Doctor Who I'd be picketting Bush House.

The World Service is still often heard very well in the US, but, you're
generally correct. The World Service isn't as reliable here as it used to
be.

In theory, you could give up TV and avoid the license fee. However, the
World Service is funded by a "government grant".

"BBC World Service is funded by Government grant and not your TV licence.
Profits from separate BBC commercial services help to keep the licence fee
low. "

http://www.bbc.co.uk/info/licencefee/

I take it that "Government grant" is a polite way of saying "You're paying
for it, whether you like it or not".

My wife absolutely loved that show -

Is it still on over there? Here in the U.S. we used to watch it via our PBS station, but they dropped it several years ago...

If it's still on, don't tell my wife - she'll probably start dropping hints about moving to England.

YMMV

I prefer that my receivers be nowhere near computers. So, I don't ordinarily connect them to a computer. However, it would be nice temporarily to connect my notebook computer to my R8B in order to update the 1000 memories it has--which is really all I want to do. So, I'd like a simple piece of software that will do this without my having to go though some elaborate setup routine.

I know about the ERGO software, but it's way more software than I need and I've heard it's a pain in the behind to setup.

Any thoughts/recommendations?

Thanks,

Steve

Thanks for the input everyone. I'll spend some time looking over the links and mulling over the advice provided.
In any case, I realize that these gel cells are on the heavier side (I think I had seen a 31 Amp-Hour one registering at 24 lbs or so). That's not too much of a concern. If I had a decent place to do some serious listening from home, I would likely not be considering this option. But, since moving to an extremely noisy apartment building in an urban area, I have really not been able to put the R8B to the type of listening I used to enjoy doing (e.g. chasing the Andean stations in the tropical bands, among other things). So, having chosen an appropriate outside listening location and having taken care of antenna considerations, I'm just looking for a proper means of powering. A portable receiver just isn't quite gonna give me quite the satisfaction that I'd get using the R8B. The issue of wear and tear on the radio is, of course, a concern. I picked up a somewhat large, padded Pelican case for this very reason. In any case, if I'm every gonna get any real usage out of this radio, I've gotta get it out of my present location.

Hmmm, now that I have more info about your setup, I wonder if the real solution isn't to be found here:

http://www.wellbrook.uk.com/

I have the 330S model and it works great for me. I'm in Brooklyn, NY. The 1530 might be better on the tropical bands. They're great antennas for noisy environments.

There's more to ''shortwave'' than listening to cold-war relic rapidly vanishing HF broadcasters. The reason many of us once liked them is because they offered voices and opinions not readily available elsewhere. Now, unless you find end-times prophecies worthwhile, such variety is readily available from multiple sources.

You are a dinosaur.

Yes, I've heard quite a bit about the good results that these Wellbrook antennas can provide. Unfortunately, I'd have nowhere to put it. I don't even have a balcony at my present location.
The real solution would ultimately be for me to move from this place. Unfortunately, that's unlikely to happen in the short-term.

Marching into Manchuria ?

May be the real bogey in the area isnt North Korea at all

It seems for some the Rising Sun will never set..

Japanese Self Defense Forces and Scientific Research my Arse

Keith

AUSTRALIA last night won an historic victory to stop Japan gaining official international approval to increase its inhumane cull of whales

for scientific reasons.

But Japan immediately set the stage for a diplomatic showdown by declaring it will ignore the International Whaling Commission decision.

A defiant Japan said it would push ahead with its scientific program to

increase the number of whales it kills, including the vulnerable humpback and fin whales so popular in Australia.

Prime Minister John Howard and Environment Minister Ian Campbell warned

Japan not to snub the international community's opposition.

"There's no justification for lethally based science," Senator Campbell

said.

Mr Howard said: "We of course are close allies of the Japanese and Japan is a good friend to Australia and will remain so irrespective of our differences on this issue.

"But we do feel very strongly [about whaling]. It has united public opinion in Australia.

"I hope that Japan will take note of how strongly countries that are traditionally sympathetic to Japan's position in the world feel on this

subject - and I'm thinking of Australia and the United States and others.

"So I just ask them to reflect on the strength of that opinion and I hope Japan acts accordingly."

Yesterday's 30-27 vote at the commission meeting in Korea in support of

an Australian resolution to protest against Japan's new so-called research whaling program was a great victory for Australia.

On Tuesday, the commission also refused a Japanese request to allow it to kill whales commercially.

Japan wants to increase its scientific catch of whales from 440 to more

than 900 each year, with many of them likely to be caught in Antarctic waters claimed by Australia.

Australia has been outraged at the Japanese plans, particularly to extend their catch to humpbacks, the basis of a whale-watching industry

worth hundreds of millions of dollars to the Australian economy.

The Australian strategy in Ulsan has been to shame whaling nations away

from the culling practice.

Despite the IWC sending Japan a clear message, Japanese delegation head

Joji Morishita said, pointing to the closeness of the vote to justify his stance: "Even though we lost, we are happy."

Akira Nakamae, of Japan's fisheries ministry said: "We will implement the [scientific whaling plan] immediately."

The Japanese defiance poses two problems for Australia: the vote is not

binding, it relies on goodwill and it might be difficult for anti-whaling nations to stop Japan if it proceeds.

Senator Campbell, who put forward the resolution for Japan to abandon its scientific plans, was overjoyed at the IWC decision.

He hoped the vote would force Japan to scrap its scientific plans.

Every year, Japan kills up to 440 minke whales under the guise of science, a guise scientists have labelled a "ruse", since much of the whale ends up on dinner plates.

Speaking to The Daily Telegraph last night, Senator Campbell said he was overwhelmed by yesterday's vote.

"It's outstanding," he said.

"We really didn't know how the vote was going to go.

"It's a really great result for Team Australia. I think all Australians

should be proud of this."

1906. 27.620 FM Repeater heard ! (new rare 'DX catch')

Newsgroup: rec.radio.shortwave
Date: 2005-06-22 18:40:19 UTC
From: SWL DX News <73varney@nosp.ucdavis.edu>

Exercpted from The KY4KY News : http://ky4ky.com/fyi.htm

(6/19/05) Floating Freeband (FM) Repeater On * 27.620 *

If you hear what sounds like a repeater outputting in the spectrum
between the 11 meter class D citizens band and the 10 meter
ham band, it's not an illusion. Rather it appears to be the creation
of some enterprising Freebanders who are operating this
latest, unlicensed repeater.

According to several reports received by Newsline, and others
posted to various Internet websites, the system in question
outputs on 27.620 MHz FM. It also seems to be located
not far from Pennsylvania's eastern most border.

But there is the interesting part. While it's not yet been
verified, the word on the street is that the input kind of floats
around the low end of the 10 meter ham band. There is some
speculation that the operators of this repeater monitor
the input frequency and move it when ham radio operators
running legal high power Morse come on the air on top of it.
At least there have been reports of strange announcements
which may be information to users as to where the input will next be found.

One Internet post describes this machine as one of a new
breed of Freeband roving repeater of the type first noticed
in the St. Louis area about two years ago. That is, those
who run these systems are physically moving the frequencies
and the geographic location of the machine to avoid detection
by ham radio T-Hunt squads and the FCC.

This is just the latest report in a string of 11 meter repeaters
that go way back to the early 1970's when
Freebanders - then called H-F'ers -- began tying together old
crystal controlled 11 meter AM transceivers as repeaters.
Most had outputs on channel 1 or 2 and inputs on CB Channel 40
or above. None worked very well and most were soon abandoned.

Note: We heard the "27.620 Machine" just before noon today in SE MO.
No word yet of they have a "QSL card address", although if they do this
\would be a RARE CATCH to confirm.

If you're driving to the location you'll be listening to, you could
easily power the radio for several hours at a clip from the car battery.

I have a gizmo intended for jump starting cars that has a 17ah battery
in it that I use for powering my telescopes. These come with a wall
wart charger, and they're pretty reasonably priced.

I also feel looking into a low noise antenna design at home makes sense.

If you haven't tried an impedance matching transformer with a random
wire, it's worth it.

1908. Eton (Porsche Design) P' 7131

Newsgroup: rec.radio.shortwave
Date: 2005-06-22 18:48:59 UTC
From: jamulc <jamulcare@gmail.com>
Message-ID: <1119466138.994992.220700@o13g2000cwo.googlegroups.com>
Source record: 25298

Saw an ad in the July/August issue of Foreign Affairs for the Eton P'
7131 (note the use of the apostrophe in lieu of a dash..I guess this is
part of the Porsche designing). According to the ad, this AM/FM/SW/XM
radio is to cost $350.

You can see this model at

http://www.etoncorp.com/US/products/product.aspx?catID=1&subCatID=1&prodID=1

Advertised as "the most attractive sound of our time", although I'd be
surprised if the shortwave performance proves to be anything
noteworthy.

That's not too much of a concern. If I had a decent place to do some serious listening from home, I would likely not be considering this option. But, since moving to an extremely noisy apartment building in an urban area, I have really not been able to put the R8B to the type of listening I used to enjoy doing (e.g. chasing the Andean stations in the tropical bands, among other things). So, having chosen an appropriate outside listening location and having taken care of antenna considerations, I'm just looking for a proper means of powering. A portable receiver just isn't quite gonna give me quite the satisfaction that I'd get using the R8B. The issue of wear and tear on the radio is, of course, a concern. I picked up a somewhat large, padded Pelican case for this very reason. In any case, if I'm every gonna get any real usage out of this radio, I've gotta get it out of my present location.

If you are planing on doing your listening in a car/van you might want to
consider adding a second battery(marine deep discharge) to the stock one. Add a dual charging adaptor and you are set. And teh battery will

be rchared in your normal day to day driving. And by adding a single jumper you can start even if the main battery fails.

See a local RV shop for details on the dual battery setup.

My wife had a VW transpoprter that we went camping in and the 2nd battery
I added made weekend DXpiditions a joy. I hated it when the tranny failed at
200K. I made a knock down desk for listening and we had hours of fun.
As a side benefit my wife became interested in radios, got her ham license,
and has become a mild SWL fanatic. She has her own DX398 and I have added a seperate antenna for her. We even have our own mini contests.
To be fair I split my main antenna to send her a feed, and use my DX398

instead of my R2000s' The winner gets to pick a nice restruant for the victory
celibration.

You can even run fairly heavy 2 conductor to allow "remote" operation
up to 50'
to allow opeation from a picnic table or tent. Since my R2000 drew
about 1/10
of your Drake you would need heavier wire then I used and I don't have
a loss table handy.

I'm wondering if there's any chance you could get persmission to put a Wellbrook antenna on your roof. They're no more obtrusive than the satellite dishes that are probably already up there. If you found a quiet spot, that might work really well.

Just a thought...

Yes, This is OFF topic, but at least I showed it up front this time! :-)

I mention this, NON-SW topic because part of it has already been brought up on this forum.

Basically, the bankrupt Winn-Dixie supermarket chain will be closing ALL N.C. locations.

Before you get too bent out of shape and claim that hundreds of thousands will lose their jobs . . . . some OTHER supermarket chain will be more than willing to pick up the slack, including hiring of GOOD help that is laid off.

Am I gloating? No. Not really, but this is what any company deserves that spies on their customers and then calls the law because a parent disciplines his or her unruly children (Something the Bible commands all parents to do!) -- but wait until they have collected their final sale to that customer to have them handcuffed. Yep! That's what happened to one lady who corrected her unruly child. AFTER she had paid for her goods and was at the vehicle, or on her way to it, she was arrested.

Well, it seems that W-D and their stupid customer service policy has, at least to some extent, BEEN ARRESTED!

Thank you all who chose to do your shopping some decent place!

Shortwave still has an important part in many parts of the world. It helps people in remote areas stay informed. It's much more practical than TV, internet, or even standard AM/FM in certain aspects. I highly doubt you'll see much more major shortwave broadcasting from developed Western countries though, at least domestically.

I owned a commercial SW license in Ecuador in the 60-s and turned it in as I could see no way of making it work.

Additionally, I owned 12 other stations in Ecuador, ranging from Quito and Guaquil to Tulcan, Lago Agrio and Bah&#65533;a de Car&#65533;quez.

I have worked in every Spanish speaking nation in Latin America except Uruguay, Nicaragua and Cuba. I have visited every single one, some as many as 100 times. I have lived in Puerto Rico, Ecuador, Mexico and Argentina.

Your assumption is not correct.

Picked up a nice r-392 today. And to think some folks think you can't gain anything from drinking beer other than a beer gut. I paid for it with money from recycling the cans from the beer that I drink when I hang out in the garage.

Love dem bones!

You must either have saved cans for a long time, drink one hell of a lot of beer, or found a R392 for a very good price.

My first good SW was a R392. A great "portable" radio. Might have been why I have a hernia. I loved mine so much that instead of selling it, I loaned it to a friend with survialist outlook. It is a very good receiver. Somewhere on the web I found a link to a series of solid state modifications that looked interested. If I recall correctly it needs ~24V @3.9A. I ran mine from a split supply. Heaters +26.5V and the B+ at 30.00V. I used a LM317, with a 2N3055 for current boaster, and a slow power on supply that took ~60S to go from 1.2V to 26.5V. I ran the receiver from 1972 through 1984? and never lost a tube/valve from failed heater. The split supply kept the drift to something like ~50Hz an hour and removed the very minor freqeuncy jump when teh crystal oven heaters cycled. The only serious defect is the lack of a product detector. The only receiver that I have ever had that was quiter was the R390.

I would strongly suggest replacing the audio output tube with a solid state replacement as it draws about half the heater current and makes the radio run much warmer. In a pinch you can couple the grids to the plates with decent caps for headphone use.

The only thing I don't miss is the joy of lugging it to a camp site. Great way to stay in shape. And of course the digital tuning can get tedious. Crank crank crank...

The Charleston and Little Rock freeband repeaters are linked
to business band repeaters and a seldom used ham repeater in one
case. There is a set up in Nashville where a repeater is cross
linked to repeaters in three other radio services.

Your right! Have you ever shopped at the numerous Guangzhou street markets
in China?
It would make an animal rights activist, not to mention the endangered
species police,
go into cardiac arrest.

Poor whales.

In theory my mounting is less than ideal, but it works very well.

I have the 330S mounted on a *horizontal* mast that attaches to my building's fire escape and extends out far enough to get the antenna away from the building's "noise envelope". I used clamps to gently attach the mast to the *top* of the antenna, rather than to the base. I'm on the third floor, so the antenna is fairly high in the air.

I considered other scenarios, some of which would have allowed me to use a rotor. However, the antenna didn't seem to be directional on the frequencies I normally listen to, so I decided to go with the arrangement just described. I'm very happy with it.

The pervert Tracy Fort, when told for the second time that my mom had died a long and painful death due to cancer, responded with a typical lowbrow quip, which is reprinted below. The man is scum. He owes every cancer victim and their families a complete and sincere apology. I don't expect he's human enough to do it.

2 out of 3 ain't bad! I paid 200 dollars for one with a power supply.
Which according to ebay pricing is a pretty good deal. I've been
wanting to get one and was going to wait until the hamfest at shelby
but went ahead and picked this one up.

I've done a good bit of research on the 392 and have mods in mind that
I would like to accomplish. Is there a commercially available
solidstae replacement or is that a homebrew project? My next rig will
be a 390. Maybe that is what I will look for at Shelby.

I like those old boatanchors. Lucily I have a place to put them and
they won't get moved around too much. If I turn on 3 or 4 at once
during the winter I can turn off the heat too.

Tracy

I don't know if anyone offers one. You might check "Fair Radio Sales",
in Lima OH, they have listed the mil-spec modules from time to time.
I only heard one once, and it sounded "gritty" to me, but it was at a
ham field day, and it was used with the mil-spec phenolic speaker,
so the speaker may have been the problem.
I have been tempted a time or two to mod mine, but my friend

listens to "hate filled" radio (RHC) and I really don't have the time
to add yet another project to my overfilled list....
This is the only link Ihave that still works.
I may have some on a backup image, it will be this
weekend at the earliest before I can restor them and
see what is there.
http://www.roveroresearch.com/r392/hints.html
(the mosfet idea looks real interesting)

OK.....

What SPECIFIC FREQUENCIES do they operate on then ??

Please provide your list of the same or a URL with info on the same.

Thanks!

Does anybody have one of these for sale? I am restoring an old Nordmende portable radio and somebody replaced the RF amplifier with some sort of ECG device.......the replacement device just isn't doing the trick.
I know that I can replace this PNP germanium device with an NPN silicon transistor, but I will have to change the biasing network values, I might have to do some impedance matching, and who knows what else?
It would be easier to just buy the proper device.

Pete

1938. Re: Panasonic RF-2200

Newsgroup: rec.radio.shortwave
Date: 2005-06-23 03:26:28 UTC
From: mike maghakian <maghakian@comcast.net>
Message-ID: <1LCdnadvHap6tiffRVn-pg@comcast.com>
Source record: 25476

the RF-2200 does not have "real" ceramic filters. like the 2800, there are
just some tuned circuits for selectivity in the wide mode and in the narrow
mode a "transfilter" is switched in.
therefore selectivity is quite cheesy.

to combat this, I am in the process of creating a SUPER RF-2800 !!!!!
I have added an LF-D6 filter in the wide position and will be adding a coax
antenna input for my portable ramsey AA7 custom antenna. I am looking into
other things so soup up. I will report on this as it progresses.

the RF-2200 can be significantly improved with quality ceramic filters.

Radio West in the early 80's used to offer a collins mechanical filter
upgrade for the 2800/2900. My FRG-7700 has two of these upgrade filters, 1.9
and 2.9

Agreed. Though portable satellite receivers are certainly possible.
XM even has a model, though I prefer Sirius.

As for the new Dr. Who -- as someone who was not a fan of the original
series at all, it was a pleasant shock when a friend came over with a
captured video from a couple episodes. Brilliant.

> > correct. The French initiated the idea of scalping.
>
> No they didn't.

> Honus. After reading the site you provided which I found very interesting
I would have to say that the book I last read entitled I believe
"History of
the Indian Nations", was undoubtedly biased in a specific direction.
That said
I think you would agree that most people when they write come from a
particular
bias. The article you provided;after looking at about a dozen sites,I
feel
was biased in the opposite direction. Obviously, it is somewhat
difficult to
look back with 100% accuracy and state how things were. I enjoy history
of all
eras, and enjoy differing opinions.

> Here are 3 web articles on the subject that I found interesting.
One totally supports the conclusion of the site you espoused with
even more information. The other two offer differing opinions on the
other end of the spectrum and toward the middle. I generally find the
truth lying somewhere in the middle. I hope you enjoy them and find
something of value. I haven't figured out the mystery of hyper linking
the web addresses yet, but you should have no trouble pasting these to
your browser. I tried them and they worked as typed.

As to the last remark following mine, I almost took offense until I realized that you and I had no history so the remark about Oh... it's you, was meant for the name of my friend mentioned above. You don't have to like me. You don't have to like him. Your choice. I will always treat you with civility and respect. So will he.

On topic for a moment.... The bands are much better yesterday and tonight. Especially 31 meter band. Last night Voice of Justice from Iran came in S-9 plus even on my portable with just the whip. 9.495mhz at about 2:30 to 3;00 UTC, just guessing on the time, in English. I am on the East Coast but good conditions! Have a great week! Jon.

I don't understand German, but this web site seems to say you can
substitute an AF239s.

<http://www.die-wuestens.de/kd/AF239equiv.pdf>

If you're stuck, I'd be happy to give you a 2sa350. The af239s is also
a replacement for that transistor - but I think the 350 is only rated
for 40mhz.

Greetings! A good friend of mine now a silent key had one and offered it to me to take home. He said he didn't use it anyway. Sure enough he died and it is to my knowledge still sitting in his storage building. His wife has no interest in his radio stuff yet can't seem to part with anything. She has asked me to help her sell his stuff a time or two, but always changes her mind. You ask why didn't I take it home? I didn't have a power supply for it. I may still get a hold of it one day. I was very impressed with it, but I love a big radio. Great find! Have a great week! Jon.

Funny how some people can inflict such cruelty on other living things, but want mercy and kindness for themselves. Do they deserve it???????? This is basically mankinds approach to other life forms. Why should mankind be exempt from this treatment then? In some places they are not. That's why mankind will lose in the end.

Gross it was, but there was nothing obvious about the satire
and if it was intended to be satirical, it was a piss poor attempt.

I don't need any help from the likes of you as regards irony.

Does anybody have one of these for sale? I am restoring an old
Nordmende
portable radio and somebody replaced the RF amplifier with some sort of
ECG
device.......the replacement device just isn't doing the trick.
I know that I can replace this PNP germanium device with an NPN silicon
transistor, but I will have to change the biasing network values, I
might
have to do some impedance matching, and who knows what else?
It would be easier to just buy the proper device.

What do you do with all those CBs?

Leonard

--
"Everything that rises must converge"
--Flannery O'Connor

I have been hunting for better Murata ceramic
IF fitlers. I have several radios to upgrade.

I have converted several to "outboard" IF strips.
Buffer the 455 KHz in a SW, feed it to the modified
CB and instant better, as in more slective receiver.
And some of the better ones I fix and give/trade to
friends. The SSB ones are worth converting to 10
mtrs. Several of us have an very informal net on
10mtrs.

I like to experiment. I have a very nice sears(Uniden)
SSB that I plan on convering to 17Mtrs. I always have
more interests then time.

Murata no longer sells the really nice fitlers, so unless
one has a vender with some stashed, this is the only

way to get them. I generally get a CB a month. CBs are
full of usefull RF parts. RF Power transistors, RF chokes
etc.

But the best ceramic filters pales when compared to a even a
poor crystal filter. And good crystal filters must be heard to be
aprreciated. You can stack up to 3 simialr ceramic fitlers for
improved skirts. But crystal filters are better. And expensive.

When I get the chance I am going to replace the stock filters in
our(my wife and I each have one)DX398s.

I got the idea for it from that other shortwave kookinschlong, James Lloyd.
(The laughing 'preacher' from Oregon who's broadcast studio sounds as if
it's next to a chicken coop and is obviously a very bitter middle-aged man)
He had a commercial on about some shady group of alleged "Illuminists" who
want to send some kind of a satellite into the atmosphere of Saturn or
Jupiter
and ignite it into a second Sun! Sort of like -lighting a FART-, albeit on
a much
more massive and grand scale. [...insert SFX of cukoo-clocks going off
here]
Did a search and came up with this page. Had to post it. This is what I
love
about domestic shortwave, there are SO MANY '8-BALLS' and 'MENTAL
PATIENTS' behind the microphones of WRMI, WWCR, WHRI, WWRB
and others I may have forgot that the comic relief is just everywhere on
the dial!
It also appears that Profit Stair has taken up roots on WWRB. I guess
D.F.'s
radio airtime rates must be dirt cheap, seein that the Profit recently
pulled a
"Michael Jackson" and got away with alleged incidents of buggery down on da
farm
with the sistahs..... (You can't make this shi+ up folks !)

Shortwave "Links-O-Sausages" & some Bratwurst too! :) :) :)

RE: Schwerner, Goodman and Chaney

Preacher Edgar Ray Killen was just sentenced to

count 1 - 20 years in custody of MDOC
count 2 - same
count 3 - same

...So how is it that we're left with one old man selected to atone for all of Mississippi's sins? Is Killen really the only one with blood on his hands?

Here's what could be done:

The Arkansas Delta Peace and Justice Center suggests the Mississippi Attorney General should tell the four surviving individuals who were convicted in the federal trial in 1967 on charges of conspiracy to deny civil rights that:

a. The State of Mississippi is intent on convicting guilty parties.

b. The State of Mississippi prefers to convict those guilty parties who have never served time (which in effect could exclude them)

c. That if they fully cooperate, they will not be pursued, or at least treated leniently.

d. Otherwise, they will be vigorously prosecuted and the State of Mississippi is confident they will be convicted as they were in 1967, and that they will spend the remaining years of their lives incarcerated.

Of course, this approach would not work with Sam Bowers since he is serving a life sentence for the murder of Vernon Dahmer. But it could work with the other three who were convicted in 1967: Jimmy Arledge, Billy Wayne Posey, and Jimmy Snowden. The approach might work even with some of the lesser figures who should have been convicted in 1967 but were not:

Olen Burrage , James Thomas "Pete" Harris, Tommy Horne, Jimmy Lee Townsend, Richard Willis.

And what about all of the victims who've never received the justice due them by the state of Mississippi? There are so many... Birdia Keglar, Jo-Etha Collier, James Edward Calhoune, Cleve McDowell... the list goes on..

If we expect no justice in Mississippi, where do we expect it?

Dear Brian,

I too own a Wellbrook ALA 330S. With this antenna or the ALA 1530 I advocate reading and carefully following the instructions TO THE LETTER with ONE (and this ONE ONLY) exception: pay no attention to the "placement" recommendations. Yes, mounting the antenna outdoors well away from a building (and its associated electrical noise) is "ideal;" in actual practice mounting location is not at all critical.

You can mount this antenna anywhere you like - choose the place that is most convenient and practical for you. (Obviously you don't want to DELIBERATELY mount it near a particularly "noisy" electrical source if there are other choices.)

I have mine mounted in my attic on a Radio Shack rotator. There it's protected from the weather and let me tell you - it functions better than any antenna with which I've had experience, going back over forty years, and that includes outdoor antennas 100-feet long and longer!

Just pick a place, or even experiment until you find the location you like. I wish you the very best of luck with your new antenna. I think you'll love it!

Joe

Source record: 25555

Dear Steve,

I have an AOR AR7030 Plus receiver and a Wellbrook ALA 330S antenna. Yesterday, just for the heck of it, I decided to try powering the whole kid and kaboodle from a Century Electi-pac (Model BPIP-99), a portable electrical power device (read: large and heavy battery).

The whole thing worked great. I listened for about an hour and a half before I turned everything off. I then plugged the Electri-pac back into the wall socket and within a couple of hours it was totally recharged.

I don't know how long this would power my radio and antenna nor do I know exactly how long it took to recharge (I went back into my room late last night and all the LEDs were "on," indicating the unit was totally recharged). I don't know the capacity of the battery but on the back it's indicated 12 Volt output 20 Amps. It will power 115 Volts at 300 Watts (2.3 Amps). I've had this item for several years (actually I have two of them); I bought it for emergency power from The Sportsman's Guide and fortunately have never had any real need to use them. I think I paid about $80 at the time.

I've often thought of taking my AR7030 out on a "field trip" along with this device (I'm sure it would be powerful enough to power a Drake R8B also) but I've never done so.

Inertia ...

Best,

Joe

Heck, for this kind of money he should consider an AR7030+. (I won't
mention the R8B, since it's not available new anymore.)

No AM sync... I mean NO AM sync is ANY help with very weak signals.
AM sync comes in handy for program listneing on signals with moderate
fade.
Not with "real" DX'ing.

I'd agree with this if it weren't for the R8B. Its sync detector can
lock onto signals that I can barely hear and, once locked on, the
signal is sometimes more intelligible. I'm not saying that the R8B's
sync detector always has this effect or that it is in general better
than the other more standard DXing techniques. However, the R8B's sync
detection is sometimes--once in a great while--EXACTLY what you need.
In other words, it's one more useful arrow in the DXers quiver.

Yes, it is, and that is true of the entire R8x series.

Wouldn't you actually have more money to buy an even better radio if
you stopped drinking beer altogether? As far as I can tell, beer costs
more than 4 cents (5 if you don't live in California).

I second what Joe says here. The 330s works very well in a noisy environment and it isn't too particular abouit its location--though of course you should try to find the quietest place possible for it. My house must be noisier than Joe's, as it didn't work well for me indoors (not surprising, since I live in an apartment building). However, once I got it outdoors, I didn't have to get it very far away from my building until it worked as described in its glowing reviews.

I'd also add that, while I could discern no real directionality with the 330S, the 1530 apparently *is* somewhat directional and should always be mounted on a rotor.

I've used both and R8 and an R8-A. I know how good the synch is on the
R8-A. Still, I didnt think it was preferable for DX'ing to ECSS tuning.
I'm sure there are isolated cases when the the AM synch will work on a
troublesome DX signal better then switching to ssb.

Well, the R8B is the ultimate synchronous detector, I can guarantee you
it does indeed make a difference between hearing a faint dx signal or
not.

The only difference is the bandwidth of the amplifier. It looks like
the same antenna to me. What is happening is that the lower in
frequency you receive on the more directional the antenna becomes AND
the lower frequencies have less atmospheric scattering so the station
looks more like a point source.

These small amplified loops are the way to go in noisy locations and
places where you can't put up a decent passive antenna.

Anybody catch the slam at Radio Shack last night on Leno?

Leno's doing a bit with Gilbert Godfrey. Gilbert is portraying "King Tut", and Leno is asking him about his King Tut exhibit. Leno asks "Tut" what it was like traveling around with artifacts that are thousands of years old.

To paraphrase Godfrey as "Tut", "Well....it's a lot like visiting your local Radio Shack!"

Ooooooooooooooouuuuuuuuuuuccccccccchhhhhhhhhhhhhh!

Eh...that one was kind of...elementary is the best word I can come up with.

> www.spartacus.schoolnet.co.uk/ww.scalping.htm

There's a couple of errors in that URL, but I managed to figure out what you
meant to type. Here's the correction, for anyone else following along

www.spartacus.schoolnet.co.uk/WWscalping.htm

> www.dickshovel.com/scalp.html

I like that one. (No surprise, eh?) Especially since it's to be found at
dickshovel.com. It's much more authorative than the others, not that
high-falutin' talk is evidence of accuracy. On this subject, I'm just more
inclined to follow archaeological evidence than anecdotal.

Thank you for the links, btw.

I'm in the middle of rearranging my den/office/shack, and haven't been able to listen to SW or MW for awhile. I'm hoping to rectify that ASAP. Of course, since my radio is a portable I suppose I could just tote it somewhere, but I prefer listening in the office.

Thanks to all who replied. The only information I could find on filter specs, which I'm really curious about now, is from DXing.com's website regarding two other Panasonic portables of the time. The specs for those are:

RF-2600 6 and 4 kHz
RF-2800 5 and 3.4 kHz

I've never used either of these two radios, but I have to think that the 2200 is more likely to be the same as the 2600 as far as bandwidth goes. The wide is fine for general program listening when there's little interference, but when it's needed the narrow doesn't usually come to the rescue. If the 2200 does use tuned circuits then it would be best to accept it as it is and be happy with what it does do well, and get a desktop for the tougher signals.

And very little of it is of relevance to rural residents in the Third World, such as Latin America. Which is why it is almost as difficult to find an SW receiver at retail there as it is in the USA.

It's shown about 30 or so posts for me today. Yup, low compared to
typical but there is also less OT crud and I'll happily take quality
(or at least relevance) over quantity. Could also be that many are
listening vs posting.

actually, the 2800 was of the same era as the 2200. the 2600 came out years later, being a cheaper version of the 2900.

definitely, a properly selected desktop or modified laptop would be a better choice.

remember, just because something is a desktop doesn't make it better. there have been quite a few desktops over the past few years that need significant help with selectivity ! the Drake R8 and SW8 series are some of the few that don't need any help.
even some of the $1000 receivers required optional filters to work well. the R5000 being the most notable.

1996. Sony ICF 7600 vs Yaesu VX-5... suggestions

Newsgroup: rec.radio.shortwave
Date: 2005-06-24 05:40:02 UTC
From: Elden Fenison <usenet@moondog.org>
Message-ID: <slrndbn68c.f42.usenet@macmini.moondog.org>
Source record: 25584

I've been contemplating a shortwave receiver purchase. I had an ICOM IC-718 that probably would have done very well. Alas, I sold it on Ebay. I didn't realize it's value as a SW receiver.

At any rate, I understand the Sony ICF 7600 is a pretty good choice. Unfortunately, they seem to be hard to find. Perhaps they're being discontinued? The local HRO here has had them on order for about 6 months with no shipment in sight.

So I got to thinking. I have a Yaesu VX-5 handheld. This radio has pretty wide receive capability. My thoughts were along the lines of getting a Sony AN-LP1 antenna and hooking it onto the end of the stock rubber duck.

Yaesu actually recommends hooking a wire onto the duck for shortwave listening. It has a screw off end that can easily accomdate a round eyelet connector.

Any thoughts as to how the VX-5 might perform as compared to the Sony radio?

Thanks in advance. :)

Try a SW radio distributor such as Universal
<http://www.universal-radio.com/catalog/portable/0360.html>
I'm pretty sure they have them in stock.

A small hand held wide band radio does not sound like a good bet.

Well, New Zealand has faded out on me at around 06:00 UTC. They were
very strong on 15,720 and 11,820 earlier.

Your view is just to extreme. There is plenty on SW of relevance to
people in central and south America. How can world events not be?

You might want to reevaluate your attitude as it is downright dour.

Very little of interst to rural residents in Latin America can be found on SW. First, such folk are generally only Spanish or indigenous language speakers (such as the Quechua and Aymar&#65533; and Guaran&#65533; speakers of the Andean zone and Paraguay. Second, rural residents are very poor, wtih annual incomes of less than $600 on the average, where a SW receiver is generally not an option. Third, international broadcasts have very little that affects local life in rural Latin America, and nothing to do with the cultures of those areas.

Even in metro areas, there is very little if any use of SW. In the 60&#65533;s, I pored over radio audience research in Quito and Guayaquil, and in the late 70&#65533;s in a variety (over 12) of other countries. In some cases, like Quito and Guayaquil, in 60,000 interfiews in late 1968, not one mention of any SW station was made! At that time, Ecuador had over 100 SW stations, most of which are gone now... I wonder why? Based on that, I cancelled a licence I had as I realized running a SW transmitter only benefitted the Empresa El&#65533;ctrica Quito, S.A.

> You might want to reevaluate your attitude as it is downright dour.

Dour? No. realistic? Yes. There is a reason why more than 2/3 of Latin America&#65533;s SW stations have disappeared in the last 30 or so years.

This guy pushed his luck.

He got off with a hung jury (11-1 for conviction) a LONG time ago. Most folks would get the message and keep a low profile and even consider moving WAY far away.

But No....

He got back on the radar of the authorities by working to get a Klan rally in his community. Trouble is that it is a majority BLACK community and the local "law" wasn't amused.

I notice that he seems to be on O2 and confined to a wheelchair. If he used to be a heavy smoker and he wasn't using the wheelchair and O2 to make him look pathetic, then if his lawyer can tie things up a few months in appeals, the preacher will likely die in his own bed and not in a prison.

I again looked at the google archives and every rrs post made under the beerbarrel name is being de-archived. Not the posts to other newsgroups, just the rrs posts.

It looks like it's pretty easy for someone to de-archive posts with google.

2015. Eton E1 MINUS XM

Newsgroup: rec.radio.shortwave
Date: 2005-06-24 16:04:03 UTC
From: Joe Analssandrini <analssandrinij@yahoo.com>
Message-ID: <1119629043.482897.289910@g49g2000cwa.googlegroups.com>
Source record: 25503

Hello Everybody,

I just got my new (July) issue of MONITORING TIMES and there, on page 4, is an Eton ad featuring, among others, the new Eton E1 AM/FM/Shortwave/"Satellite Ready" Radio $500.

No mention of XM - nor is the XM logo on the picture of the receiver itself.

I guess Eton went back to the drawing board; hence, the (further) delay in shipment.

They've only been "designing" this radio for the past ten years! I wonder if they'll ever get their act together on this model or if it will be decided to make this another example of "vapor" radio.

If they ever do produce this model I think it would be better NOT to be the "first kid on the block" to buy one unless you LIKE being a "guinea pig." Let others have the initial "misfortunes."

This is a pity as it appears that Eton is the only manufacturer who is truly supporting shortwave radio. I only wish they would incorporate the latest circuitry, such as synchronous selectable sideband, dual conversion, and multiple bandwidths, in all of their models - including their lower-priced ones such as the E10 (sad that this model at its price is only single conversion) - even if they have to pay a license fee for certain of these features.

In any event, and especially for those who have already ordered the E1, DON'T hold your breath while waiting!

Best,

Joe

They have a reputation for issuing multiple press releases announcing some grand new product that takes for ever to appear. Unfortunately the product was usually delayed and there was not always a followup press release announcing the delay...only silence.

Is $500.00 less than the original estimated price?

2017. SW Radio Africa

Source record: 25505

SW Radio Africa soldiers on on 15145 at 1700 today with their standard s/on routine. Signal just slightly better than yesterday. At 1702 a buzzing noise came up on the frequency, not sure if intentional jamming or not. The noise does not seem to be local to my location, making a real mess of any reception. 24 June 2005.

Joe,

The ad says "satellite ready" because you have the option of purchasing the external satellite antenna, and subscribing to the satellite service. (See the Eton E1 at Universal Radio's website. It shows the satellite antenna module as an option.) The antenna module is an option since not everyone, including myself, cares about receiving satellite radio.

To wish that Eton would include sideband selectable sync detection and multiple bandwidths on their cheaper radios is like wishing that the cheapest Lexus would include all the luxury features of the most expensive Lexus. If Eton included the extra features on their cheaper radios, it only makes sense the radios would cost more. It makes good sense to offer several choices to the consumer. The more features you want, the more you have to pay. Isn't that the way it happens with everything else?

2019. K1MAN Demands The Press Explain Why Its Not Reporting His Side

Newsgroup: rec.radio.shortwave
Date: 2005-06-24 19:01:40 UTC
From: channel391@juno.com

K1MAN is justly asking why the ham press has not presented his side of
the story. Please read his editorial response below:

K1MAN EDITORIAL - ED050616 -

WHERE IS THE OTHER SIDE OF THE STORY?

You read what the FCC says about K1MAN. You read about what other
hams say about K1MAN. Where do you read about what K1MAN says?
ARRL? No! QST? No! CQ? No! World Radio! No! K1TP? No!
QRZ? No! What is wrong with this picture, you ignorant hypocrites?
No wonder the Arabs hate our guts so much. No wonder Amateur Radio
is going down the tubes, led by ARRL.

I love both America and Amateur Radio, however. K1MAN will be on for
many many years to come, and the true scum of our precious hobby and
service will be thoroughly exposed in the upcoming court proceedings.
K1MAN has been on the air with IARN information bulletins since 1987,
and the FCC is as powerless to stop them as K1MAN is powerless to
stamp out amateur radio ignorance. Fear not fellow Radio Amateurs.
You have the constitutional right to be stupid! Only in America!

Join the American Amateur Radio Association today! See www.K1MAN.com

K1MAN SAYS:

FCC ISSUES A $21, 000 NOTICE OF APPARENT LIABILITY AGAINST K1MAN

In a "NAL" released 7 June 2005, the FCC has opened a pandora's box, according to Glenn Baxter, Manager of IARN, the International Amateur Radio Network, and AARA, the American Amateur Radio Association.

Mr. Baxter was recognized by the State of Maine legislature on March 13, 1991 and named as a Vermont Academy Distinguished Alumnus on October 1, 1993 for international amateur radio communications work with his IARN.

Mr. Baxter says that this whole charade is being driven by petty ham jealousy and the blatent incompetence of ARRL in failing over the years to come even close to the work of IARN in emergency communications work.

Mr. Baxter welcomes these court actions since he has been trying to "face off" with the Commission for over 15 years. "Many heads are finally going to roll," acording to Baxter. K1MAN's response is printed below together with the full text of the NAL.

well, lets see. if k1man via channel391 is all concerned about not getting his side of the story out in all those magazines it must mean that he doesn't have enough of an outlet of his own to think he is reaching anyone. where are all his loyal followers? where are all the members of iarn coming out to support him? where is the world wide network of iarn writing to all their powerful friends building support for his case? and where is he? i haven't heard one of his broadcasts in quite a while, its kind of hard to pretend he is a viable source of information these days without the broadcast... and without the print media... and without the friends...

The commission is a very "leaky" organization, and my source
tells me a certain manager is, putting it mildly, furious that the
K1MAN NAL was issued. Look for one or more very quiet
early retirements and/or resignations.

Do any of you know about this on line petition to the fcc
to stop them from renewing the ham license of K1MAN? I found
it on eham.net.

L.L.

Petition to Deny Renewal to K1MAN:
Brian (K3VR) on June 15, 2005

By now, you've probably heard that K1MAN has received a large NAL
(fine) from the FCC, for Broadcasting, Wilful Interference, Lack of
Station Control, Failure to File Required Information, and Pecuniary
Interest.

Even if K1MAN were to pay this NAL, there is no guarantee that his
obnoxious behavior will change. If he were to lose his license, and yet
still continue to transmit, at least the Government could seize his
equipment.

The fact is, K1MAN has received lots of letters from the FCC over the
years and nothing to date has stopped his trashing of Amateur Radio.
For this reason, I believe he should permanently lose his license to
transmit over amateur radio.

As it happens, K1MAN's license is due to expire on October 17th. The
FCC already has a procedure in place where we, and the rest of the
listening public, can make our voices heard regarding K1MAN's license
renewal.

I propose we use the FCC's standard procedures to file what's known as
a "Formal Petition to Deny Renewal." Basically, the petition would be
signed by all of us who believe K1MAN's license should NOT be renewed.

As it happens, there is a website being written right now to accomplish
this task. The "Petition to Deny License Renewal to K1MAN" is in the
process of being written by Keith Lamonica (W7DXX).

Based on K1MAN's on-air behavior, we will ask that the FCC not renew
K1MAN's license this fall. I've already begun collecting comments.

All you need to do is indicate in writing, that you believe K1MAN's
amateur radio licenses should NOT be renewed.

Referencing his NAL letter, send your comments to:

Brian Crow
2550 Mosside Blvd

Suite 212
Monroeville, PA
15146

Include your comment in favor of the petition to deny license renewal to K1MAN, along with your name, callsign, address, signature, and a daytime phone number for verification.

Your comments will be submitted to the FCC along with the petition. Even a postcard with the required information will do it. If you have a lot to say, send me a letter.

Please join me in supporting this Formal Petition to Deny License Renewal to K1MAN. We need YOUR comments!

The website and petition, now in progress of being completed, is located at:

http://www.no2k1man.com/

Thanks for your support!

Thanks for the reply Telamon. I just visited the local HRO today and by
golly they got some of the Sony ICF 7600s in. So I've purchased one of
those and an AN-LP1 antenna.

I was almost leaning to a Yaesu FT-857D... all-band, all-mode ham
transceiver with an ATAS-120 self-tuning screwdriver antenna. But that's
about $1000 total and being in an apartment, I don't think I'd really be
able to get out well enough with an indoor antenna to justify spending
that much extra for transmit capability.

Source record: 25520

Dear John,

$500.00 was the original announced price and that included an XM antenna which is now evidently NOT included.

I was in a hurry when I made my original post and I forgot to mention that apparently this radio STILL does not offer IBOC, the DAB's, or DRM, thus making it, even before its release, a technological "also-ran."

Best,

Joe

Dear Gary,

I'm afraid I disagree with you. Compare the features of the Eton E10 with those of the Sony ICF-SW7600GR. Both radios sell for approximately the same price yet the Sony offers far more important features than does the Eton and, due to these features, its performance is better. Also the Sony, manufactured in Japan, is made to a far higher construction standard than is the Eton.

Compare the Eton E10 or E100 with comparably-priced models from Degen/Kaito. All of these models are made in China; why aren't their features comparable at their respective prices?

No one expects an AOR AR7030 Plus for the price of a Grundig Mini 100PE, but Eton, which seems to support the shortwave hobby better than any other company, should take into consideration the modern features which make SW listening more rewarding and satisfying. If Degen/Kaito can include dual bandwidths and dual conversion at $75.00 (or less), why can't Eton? If Sony can include synchronous selectable sideband circuitry AND dual conversion at $130, why can't Eton?

Just my thoughts.

Joe

It Eton really wants to support the shortwave hobby, they should include a high quality tabletop receiver in their lineup and skip this absurdly overpriced portable.

Because the Chinese Communist Party subsidizes Degen/Kaito, and most State Owned Enterprizes,
to undercut its primary competitors - Taiwan's Eton/Grundig & Sony.

Wasn't the Degen/Kaito you likly refer to sold for less than $50 on E-Bay?

> If Sony can include synchronous selectable sideband
> circuitry AND dual conversion at $130, why can't Eton?

The Sony 7600GR is a steal @$130.

Dear Steve,

Well said. I agree with you. While I admire Eton for its support of the hobby (what other company actively promotes shortwave radios or even markets them properly - just today I saw a large display of their SW radio line at our local Circuit City, of all places!), I have less patience with the radios themselves which do not offer the serious SW listener what he/she wants/needs.

I feel that they can do better. And I believe they should. I would like nothing better than to have another "irresistable" Eton product that I would "have" to buy. (The last such product they offered was/is the Grundig Satellit 800, which offers fantastic performance for its price. I know. I own one.)

Best,

Joe

No, I stopped watching Leno after his "that'll teach people to get
cancer" wisecrack a while back. I lost one family member to cancer, and
I'm considered to be high risk for cancer so I don't find it, or him
funny.

Source record: 25528

Dear "Boozer,"

Eton's products are in fact made in China, not Taiwan, by Tecsun, a Chinese company.

There are several Degen/Kaitos selling for between $50 and $100 which offer far more than Tecsun's (Eton's) radios both in terms of features and performance.

The Sony ICF-SW7600GR is indeed a "steal" at $130. It was even a "steal" at $160, which is what I paid for all five - no kidding, that's how many I own - of mine several years ago. And it is made in Japan! I recommend that anyone seriously interested in shortwave radio buy one of these "while the getting is good." Both Amazon and J&R Music World have the ICF-SW7600GR at low prices. As a "first" radio, as a "travel" radio, as an "only" radio, you just can't go wrong, in my opinion.

Eton/Tecsun COULD be competitive if it truly desired to do so. Sony, though it makes the most technologically-advanced shortwave portable radios on the market, evidently is no longer interested in shortwave radio or the shortwave listener and hasn't been for some time. I really wish Eton would become the "Sony" of the 21st century, at least as far as shortwave radios are concerned.

I would love to be able to support this company by buying its products but I'm afraid that its current lineup offers no incentive for me to do so.

Best,

Joe

I agree. And now you can throw the S350DL into the mix as well. At $150, and single conversion at that, one would be better off with the 7600GR.

I'm beginning to wonder if the marketing department at Eton didn't just walk out of a Dilbert cartoon.

Baxter lives in Massatoosets, or is it Massatoochits? Or in Massa Two Tits?
Any way you cut it, however you spell it, Glenn and his Blabfests are
hopefully going to be a thing of the past.
It will be interesting to see if Baxter will go down with both guns blazing
as he cohosts with arrogant Richard Whiten, ex WB2OTK and fellow jammer by
his side.
That $21,000 fine is sure to put a dent in his coffers, even for a
"professional engineer" of his self-proclaimed high standing.
Hey, Glenn. Ever entertain the idea of initiating a legal defense fund? I'll
donate two cents.

Jon,

In addition, switching power supplies can be rather noisey and interfere with radio reception but they are more efficient than linear supplies. The original supplies were linear power supplies. Linear power supplies are somewhat wasteful but they work well in the radio environment. While being large and heavy, I would still like to get an original supply for this radio along with the transmitter. I did find a complete setup for 900 dollars in Tampa but I don't have the time to go get it right now.

ROGER WISEMAN'S GREYHOUND MEN'S ROOM BAND
```

Lead vocal: Dr. Winston O’Boogie

It was twenty years ago today,
Roger Wiseman forced the boys to be gay
He’s been going in and outa their rears
And he’s made them into ravin’ queers.
So watch out or I’ll force on you
The act we've hated all these years,
Roger Wiseman’s Greyhound Men’s Room Band.

We’re Roger Wiseman’s Greyhound Men’s Room Band,
Disciples of the Bucktoothed Choad,
Roger Wiseman’s Greyhound Men’s Room Band,
Sit back and watch us shoot a load.
Roger Wiseman’s Greyhound, Roger Wiseman’s Greyhound,
Roger Wiseman’s Greyhound Men’s Room Band.
It's wonderful to be here,
But Wiseman’s full of crap,
The dirty goddamn pederast:
That fucker gave us syphilis,
That fucker gave us clap.

I don't really want to stop the show,
But I thought you had all better know,
That Wiseman’s going to play a song,
On a stickpin that he stuck through his schlong.
So let me introduce to you
The one and only Bucktoothed Choad
And Roger Wiseman’s Greyhound Men’s Room Band.

Contest - Accumulative.

As from new year 2005 the Nordic activity contest (NAC 50 MHz) will move from 4 th. tuesday in the month. As there have been a contest round for the last 14 years at the present date/time, we feel a valuable activity will be lost by moving it. Therefor the OZ50MHz Group have decided to establish an accumulative contest at the present evening so "business as usual" can be maintained.
To keep things as simple as possible, we will have rules very close to the NAC. This means an Open class high power and an Open class low power section, a OZ high power and a OZ low power section.

Contest calendar 2005.

January 25 th. 18-22 CET / 18-22 UT
February 22 th. 18-22 CET / 18-22 UT
March 22 th. 18-22 CET / 18-22 UT
April 26 th. 18-22 CET / 17-21 UT
May 24 th. 18-22 CET / 17-21 UT
June 28 th. 18-22 CET / 17-21 UT
July 26 th. 18-22 CET / 17-21 UT
August 23 rd. 18-22 CET / 17-21 UT
September 27 th. 18-22 CET / 17-21 UT
October 25 th. 18-22 CET / 17-21 UT
November 22 nd. 18-22 CET / 18-22 UT
December 27 th. 18-22 CET / 18-22 UT

Rules - Open class 2005.

Participants.
OZ50MHz Group hereby invites all licensed radio amateurs outside Denmark to participate in the OZ50MHz Accumulative Contest - Open Class.

Date & time.
Fourth Tuesday in every month - 19:00-23:00 CET/Danish local time. (Never at December 24 th. or 25 th.)

Section.
OCHP. Open Class 50 MHz - High power > 100 w.
OCLP. Open Class 50 MHz - Low power < 100 w.
Single and multi operators participate in same sections.

Contacts.
Each contacted station counts only ones even if it is /A, /P etc.
Duplicates must not be deleted from the log, but shall be listed as a normal QSO with zero (0) points. In case points are claimed for a duplicate QSO, ten times the claimed points will be deducted.

All operation in accordance with IARU Region 1 bandplans. No contacts via active repeaters or EME are allowed.

Exhange.
RS(T) and Locator, e.g. 59 JO55WW. No QSO no. is needed!

Points.
1 point/km + 500 bonus points per WWL.

Awards.
In the annual result only the nine best contests are evaluated. The first three stations in each section, and the best station in each country, will receive an OZ50MHz Contest Award.

Entries.
Logs must be received no later than a week after the contest at the OZ50MHz Group. Logs received later than that will be used as check logs.

Logs may be submitted electronically to the contest manager, oz50mhz@qrz.dk

O. Bjørn Madsen, OZ6OM
Falen 35, 3 tv.
DK-5000 Odense
Denmark

Results.
The contest results can be seen at http://www.qsl.net/oz7six/OZ50MHzResults.html

Well designed and built switching power supplies can be as quiet as
the better linear power supplies, and quieter than the cheap ones. Most
AM radio stations are buying solid state transmitters which are not much
more than a modified 1 to 50 KW switching power supply.

"Joe Analssandrini" <analssandrinij@yahoo.com> wrote
>
> Eton's products are in fact made in China, not Taiwan, by Tecsun, a
> Chinese company.
>

Eton outsources to Tecsun. Tecsun has the financial interest of the CCP.
The CCP owned enterprises often sell products at or under cost. That
is the advantage of a State Owned/Subsidized Enterprise (SO/SE). This fact
has nothing to do with
Eton/Grundig which simply has a contract with Tecsun to produce so many
widgits at such and such cost. Eton/Grundig and Tecsun are not the same
company.

> There are several Degen/Kaitos selling for between $50 and $100 which
> offer far more than Tecsun's (Eton's) radios both in terms of features
> and performance.

Again, Tecsun is capable of doing so for the reason sited above. Unlike
Eton/Grundig and most "western" country enterprises, the CCP owned
enterprises
do not answer to shareholders or anyone else for that matter. The CCP is
violating numerous trade agreements with impunity. They get away with it
because
so many western corporations have huge investments in China where these
western
corporations seek CCP political favour to "get a piece of the action".
Meanwhile,
western factories move to China. In the not so distant future you will be
driving a car
manufatured in China. Detroit will be an automobile ghost town.

One example is the textile industry. This past January textile quotas from
China
had been dropped in the EU and USA. There was a flood of imports of very
cheaply priced textiles. FYI: Clothes in China are incredibly cheap and the
quality
has improved. A decent designer T-shirt can be purchased for $1US (yes, one
dollar).
Even Thailand, India and other textile producing countries are suffering
from the CCP's
dumping tactics.

This is also happening in other areas of production. Soon this hardline
Communist
dictatorial country will be able to not only produce but also design

advanced electronics
micro-chips which will rival those designed in Japan. Japan designs and
produces the most
advanced micro-chips in the world of which the U.S. military is a very good
customer.
If the Japanese can not sell its micro-chips due to price under cutting by
the Communist
subsidized enterprises, the Japanese companies will simply have to leave the
business.
In whcih case where will the U.S. military go shopping?

> The Sony ICF-SW7600GR is indeed a "steal" at $130. It was even a
> "steal" at $160, which is what I paid for all five - no kidding, that's

> have the ICF-SW7600GR at low prices. As a "first" radio, as a "travel"
> radio, as an "only" radio, you just can't go wrong, in my opinion.
>
> Eton/Tecsun COULD be competitive if it truly desired to do so.

You are confused - Eton/Grundig is NOT = Tecsun!

Yes of course, Eton/Grundig can compete if the democratic and free Taiwan
government chooses to subsidize them and Eton decides to sell at or below
cost.

> Sony,
> though it makes the most technologically-advanced shortwave portable
> radios on the market, evidently is no longer interested in shortwave
> radio or the shortwave listener and hasn't been for some time. I really
> wish Eton would become the "Sony" of the 21st century, at least as far
> as shortwave radios are concerned.

You are witnessing the result of what I have stated above.

>
> I would love to be able to support this company by buying its products
> but I'm afraid that its current lineup offers no incentive for me to do
> so.

That is EXACTLY what the CCP wants to accomplish.
It may happen that the next time you go to fuel your SUV the gas station
will be selling fuel owned
by a CCP oil company.

The CCP is using a Wal-Mart economic model on steroids on a grand global
scale.
The CCP controls the Horizontal (Yuan currency valuation) and the Vertical
(SO/SE production).

Meanwhile, the Chinese people suffer under the most brutal Communist regime.

BEIJING, June 24 -- CNN and BBC will air Beijing TV shows for four years in a row, featuring the modern Beijing and its glorious history as well as its sci-tech and artistic development.

As is learned from the "Market Promotion Conference on Olympic Tourism", Cable News Network (CNN) and British Broadcast Corporation (BBC) will air Beijing TV shows for four years in a row, featuring "modern Beijing", "glorious Beijing", "sci-tech Beijing", "artistic Beijing" as well as "humanistic Beijing".

According to Yu Debin, deputy director with Beijing Tourism Administration, the TV shows to be on CNN and BBC will be divided into four chapters, namely scenery, culture, cuisine and shopping, all-directionally and multi-angle illustrating Beijing's achievements to the rest of world. In 2003, Beijing broadcasts its own advertising shows directed and designed by well-known director Zhang Yimou via CNN world channel for 116 times, reaching more than 200 countries and regions.

It is said that the year of 2005 is acknowledged as the Beijing Olympic tourism year, and 2006 humanistic Olympic appreciation year, 2007 green Olympic demonstration year and 2008 sci-tech Olympic impression year. Government demands that starting from this year on, all domestic and international promotion activities must highlight the concept of "sci-tech Olympic, green Olympic and people's Olympic", making it the theme of Beijing's image advertising.

The official estimation shows that under the positive influence of CNN's and BBC's propaganda and promotion activities in various regions, Beijing is expected to welcome 3.5 million overseas tourists in 2005, who will bring along a total tourism revenue of 3.5 billion US dollars. It is estimated that Beijing will embrace 4.6 million overseas tourists in 2008, bringing 4.6 billion US dollars in tourism revenue to the Chinese capital.

The Elad FDM77 has been on Universal's site for a few weeks. The Italian manufacturer seems to be an established electronics firm for the medical and other industries. The specs for the radio sound pretty good for the money, but I was very disappointed with the software after seeing a demo run on a friend's computer. The frequency display is very hard to read clearly (horrible choice of font), and the overall interface seems clunky compared to the Winradio g3 series.

Yes, but the Eton & Grundig radios are merely rebadged Tecsuns with no
additional and in most cases, fewer features. Eton isn't designing
radios, it isn't manufacturing, it is buying standard Tecsun product
and slapping a new label on it.

2079. HUM! Grundig TR 807

Newsgroup: rec.radio.shortwave
Date: 2005-06-25 19:45:48 UTC
From: ascension_fl@hotmail.com
Message-ID: <1119728748.594982.238210@g49g2000cwa.googlegroups.com>
Source record: 25617

I was at a flea market recently and came across a Grundig TR 807, which I bought for $20 so I would have something to play with some evenings. The problem I have is a VERY loud hum, *both* in AC *and* DC power modes. It brings in some stations even with using just the collapsible antenna on the radio, so maybe it is worth salvaging-- but I have no idea how to get around that hum.

ANY suggestions on how to fix it would be extremely appreciated.

Thanks-
Scott Anderson

A shortwave broadcast is "relevant" to anyone who's interested in
listening to it, regardless of culture. It might be hard to find SW
receivers, but it sure isn't hard to find stuff on shortwave. Like I
said, at night the bands are bursting at the seams.

They might have one radio per village, or something. I remember seeing
pictures
of rural folks all gathered around the radio, listening. But that was
years ago, though...

Your attitude about the future of SW in a Usenet SW radio hobbyist news group is gloomy and unfriendly where enthusiasm about the hobby is the norm and you stubbornly extend some economic study on the commercial viability of a SW station you made to mean any use of SW in south America is a wast of time. Dour? You bet. Realistic? No way.

I hear many broadcasts in spanish where the listing show SA as the target. I guess nobody is listening to any of them.

Off the top of my head:
I have heard news about the world bank loans to South American countries and other news about the economies of those countries.
I have heard about South American politics.
I have heard stories about the coffee growers in South America.
I hear broadcasts to South America on religion, to many really!
I have heard about the rain forest destruction and the changes in the lives of the people living there.
I have heard about weather related news about storms and damage they cause.

I have been to both coasts on Mexico and saw short wave radios around. Mexicans I spoke to knew what SW was. I'm afraid all I can offer is my experience on the pacific coast of Mexico and the Yucatan on the atlantic side to your more extensive travels in central and South America but at least the people in those places knew what SW meant.

anybody out there useing a new JRC NRD-545DSP Receiver.
If so hear for sale is the wide-band converter unit Option that extends the
frequency coverage from 30MHz up to 2GHz.
this option would cost you ?299 from your radio dealer. i am looking for
half the new price. this is still fitted in my NRD-545
this is new and was an unwanted option that was fitted to my NRD-545 when
brought for me new.
if i am doing wrong posting this link hear sorry just tell me and i will not
do this again.

> Let us know how you make out with the ICF-7600 using the loop antenna.

So far it's not pretty. I've spent hours just trying to find a station I can copy. I am in Oregon. I know that fewer broadcasts target this area, but I did expect it to be better than this. I do think I caught some of "Radio Netherlands" last night. That was kinda neat.

My first experiment was at nighttime. Today, during the daytime, there is virtually nothing at all out there that I can copy.

One thing I wanted to do, was copy activity on the ham bands. Today being field day, you'd think there'd be a lot to listen to. But I'm afraid I'm not having much luck. Color me dissappointed.

" no lectures please " ..... ha ah hah aa trippy.

let me see now !!! ..... if I understand this correctly .....
you want someone to list the location of a store or site
selling equipment that violates US federal laws ..... and
" extra points " for people that will " relate " their
experiences (right here in front of everyone)
while committing federal felonies , using this illegal
equipment !!!! is that right ??? ha ha ha ha ha ha

this has got to be one of the most LAME and
shallow " sting " attempts that I have seen in some time
(and " I " have seen a bunch) .

heck , while you're at it ..... " everyone here that has
a murdered body buried in their back yard ,
please raise their hand too !!! " (no lectures please
ah aha ha ha)

well kathleen , looks like you have really thought this out
eh ???

> to repost that?

Let me save you the trouble. Here it is. I never mentioned sex. Your fevered imagination, combined with what appears to be poor reading comprehension, did.

As the rest of us know, the best reason to go the wood shed is to get wood. Your sister may have had a tough time carrying in the wood because of the weight. She may have had a tough time chopping the wood and needed help with that.

She may well have needed an opinion as to how long the existing wood stockpile would last before more sawing and splitting was in order. She may have well wanted to know the BTU content of pine compared to maple. She could easily do that, as she's always been smarter than you and much more aware of the world she lives in.

Now, given these very valid reasons to be called to the wood shed, I find it very telling that you automatically thought of *SEX* as the first option. You are obviously one sick puppy. Your own sister...shame...you make decent human beings everywhere throw up.(*)

(*) Good taste not applicable in Mississippi, Georgia and elsewhere where prohibited by law.

A friend of mine, Jim Tonne, WB6BLD, has written a much-improved, Windows version of a classic great-circle plotting program and is providing it to the Amateur Radio community FOR FREE.

If you are a DX'er and need an antenna-bearing aid or just like to poke around on the earth's geography, this program will be of interest to you.

It calculates the bearing and distance from a Home location to a Target location anywhere in the world and displays this result on both azimuthal (polar) and rectangular maps. Both the Home and Target locations may be selected by mouse designations on the rectangular world map or chosen from a menu of cities, countries and callsign areas. The Maidenhead grid system is fully supported on both data-entry and readout. Sun and terminator positions are plotted on both maps in real time from the host computer clock, enabled by a menu selection. Both maps use an accurate, high-resolution, up-to-date geographic database. The azimuth map may be plotted at five different resolutions, allowing an optimum mix of accuracy and computation speed. Additionally, the azimuth plot may be repeatedly zoomed-in or out by a factor of 2 to place both Home and Target on-screen. Bearing and range overlays are provided in the azimuth plot, making it suitable for a printed-out beam-heading chart.

Both the polar and rectangular plots are printed to the standard Windows printer, no special drivers are needed. System requirements are a Pentium processor (P4 recommended), Windows 98, ME, 2000, XP, and 4.8 Megabytes of free disk space.

The download installation file size is 2.5 Megabytes. The program download URL is:

http://tonnesoftware.com/pizzadownload.html

There are other programs out there that perform this same calculation, but none with the combination of features Pizza offers.

Oh, yeah, that name. Bring up an azimuth plot of the
entire world and it hits you in the eye like a big
pizza pie -- that's amorï¿½!

Jim, K7JEB

Bill Gates made the same accusation about cars. A top honcho at GM
asked an auditorium full of people if they'd buy a car that crashed
twice a day.. A car where you'd have to stop and reinstall the engine
for no particular reason.

Basically, cars are using the same technology as Henry Ford's. Power
source, drive train, tires, etc. The improvements have been cosmetic
and evolutionary. It's been proven to be extremely reliable and,
unless you're a very bad driver, rarely crashes from mechanical
failure.

BTW, I have read practically all of the previous posts to this group about receiver hum, so I guess I need need to be more specific and ask further if anyone has any experience with this model (Grundig TR 807) radio *in particular* in regard to hum. I've tried moving it around, taking it other places, etc., so now I'm thinking defective component... again, *any* info would be great.

2095. audio improvements(long!)

Newsgroup: rec.radio.shortwave
Date: 2005-06-25 23:32:01 UTC
From: r2000swler@hotmail.com
Message-ID: <1119742321.380527.47540@f14g2000cwb.googlegroups.com>
Source record: 25633

Several weeks ago I asked if capacitors could make that much difference

in intelibility and that such a simple question would move me to
complete,
then redesign a project from over 20 years ago.

I found that on weak and noisy signals capacitors can make a world of
difference. A little scrounging has given me a Pioneer KEHP9500 MOSFET
automitive stereo unit, with very low distortion when operated below
10W
and a set of Minmus 7 speakers. And 10W in 2 speakers is painfully
loud.

I brought the audio straight out from my R2000 and found that by
bypassing
all of the audio chain the audio was much clearer. 2nd best was to use
the
Rec out. The difference here is slight and I wouldn't swear in court
that
I am positive.

I then compared the detector direct signal with different types of
capacitors. And Craig at Kiwa is mostly correct. My only disagreement
is with the Panasonice bypolar electrolytics. I douldn't hear any
diffrence bewteen
them and "good" single ended caps. Perhaps my samples were bad. And all
electrolytics sound worse then mylar and related caps.

I then compared the best direct signal with the improved detector.
Again a hands down victory for better technology. I did a quick
comparison between
2 different improved detectors.
<http://www.amwindow.org/tech/htm/lowdisdet.htm>
is a simpler single IC unit, and the unit shown at
<http://www.amwindow.org/tech/htm/alowdisdet.htm>.
While the simple unit is much better then the stock diode, the 2nd,
more complex unit is much better then the simple unit.

I then compared the
<http://www.amwindow.org/tech/htm/alowdisdet.htm> unit with the AD607
synch detector. The synch detector is the clear winner.

The first comparisons showed the advantage under weak/noise conditions.

The sycnh detector is better under ALL conditions. My wife plays the
flute
and we listened to a folk music broadcast from SA and my wife said is

it was the first time a flute really sounded like a flute on the radio.

The "Vinyl Cafe'" on the CBC (13.655 10EDT) today sounded great!

Many radios would sound much better with some attention to the audio
chain.
I used to think that a "little" distortion didn't matter. After all the

signals get pretty mangled by the ionosphere. And I was wrong. It makes
a
great difference. I have spent the day listening to HF and going back
and
forth just to get a feel for it.

I experimented with better, lower V-forward, and tried biasing the
diode.
While these steps can make very minor improvements, they are hardly
worth
the minimal effort.

Most audio sections are now built from ICs. Most ICs have nasty notch
or
"cross over" distorion. If I was crazy enough to decide to rebuild the
complete audio chain I would start with a better output stage, a
discrete,
MOSFET design. I would then rework the stages to eliminate all the
electrolytics in the signal path. I would then add an AD607 synch
detector
and redesign the BFO.

My R2000s are like new receivers. I can uderstand signals that were
lost
in the noise before. For the time being I am going to live with an
outboard detector BFO combo. Kind of like the Kiwa MAP, or the Sherwood
SE-3 MK III. I
say "kind of" because I doubt that my unit approaches the quality of
either
of those units. I am still working out the details and so far have
~10KHz, 4.8KHz, 3KHz 2.1KHz and 500Hz filters with the last 2 being
crystal fitlers.
A word of advice to anyone deciding to add filters, forget the older
Collins mechanical filters. Mine at least "rings like a bell".

I am still working to intergrate the BFO, "tone tilt" filter switching
and trying to come up with a decent project case. But the effort has
been well worth the effort.

While I would love to buy a really "good" receiver like the AOR7030+,
or
one of the better Drakes, or even an NRD, money being rather tight, I
am
happy to get any improvements I can.

Terry

I finished the AD607 synhcronous detector and have
been testing it and comparing it to the stock diode
detector and to an "improved" diode detector.

The west coast has weaker signals then the rest of the country but there are some that should come in better for us west coast people. New Zealand is good on 15,720 late afternoon until 8:00 PM in the evening then they start getting weaker until they switch over to 11,820 around 10:00 PM. 11,820 is almost always good as is 9,885 that they switch to around midnight.

Australia is another good catch, I'm listening to them right now on 21,740. At 00:00 UTC they will go to 17,715 and 17,795. These should work well for you. Then they will switch to 15,515 at I think 02:00UTC.

You should get the BBC really well on 5,975 evenings and radio Netherlands broadcasts should come in well. Daytime 19:00 to 20:00 UTC try 17,660 and 17,735 and 15,315.

Evenings radio Netherlands is on for one hour at 04:00 UTC on 6,165 and 9,590. Both of these should be strong signal for you.

Maybe you are in a bad spot in your apartment. Try the loop antenna near a window. It is directional on the lower bands so rotate it to find a null on the signal and then turn it 90 degrees from that.

RHC Cuba is another big signal on many frequencies and so is RCI radio Canada international. Another is China.

All these stations have web sites with their schedules. Go check them out. You might want to try the radio in the park to see if you do better.

Late afternoon until near sunrise you should get a ton of strong signals
on the 6 and 9 MHz bands.

Closer to Ocala, and "The Villages" where thousands of retirees move in every year. Let me know if you're ever down here and maybe we can meet to say hello.

I am getting used computers from some of them for my "Computers for Veterans" project. I collect and repair, then give away computers to disabled Veterans, and Veterans who are down on their luck. There is a link on the right side of the "Organization" line of this message header that will take you to the website I have started building. It explains more of what I'm trying to do. A brief mention was made in the "Community Bulletin Board" in the local paper last week. I received 25 e-mails and two phone numbers from people who want to donate parts, software, and full computer systems..

It reminds me of an old Radio Peking QSL card I received years ago. The view
was taken from inside a grass hut, looking out. You could see the workers in
the fields. The hut had no furniture apart from a wok, a first aid kit, a
transistor radio and a semi-automatic rifle.

The reference is to rural Latin America, which you can see in the paragraph above. Except for Spanish and indigenous languages, there is very little usage of any other tongue in rural Latin America. And what is generally available in Spanish is limited, and either consists of local stations from other areas (declining) or mostly religious material. There is not a wealth of secular international Spanish broadcasting, and that which exists is often of little interest to the social and educational level of rural Latin America.

I never saw that in Latin America. And I built my first station there 41 years ago. In the last 3 decades, AM FM receivers have been prevalent and cheap: nearly everyone has one. AM & FM networking on a national level brings good local signals to nearly all of Latin America, with no need for SW, which is now a curiosity.

The fact is that you are hard pressed to find anyone who listens to SW, and that is a reality. The reason whey there are less DXable SW stations in Latin America is that the investment in same does not return benefits... whether these be converts, sales or propaganda objectives. HCJB reduced its operations in Ecuador when they moved from Pifo because they now believe in many local stations and not as much in SW.
>
> I hear many broadcasts in spanish where the listing show SA as the
> target. I guess nobody is listening to any of them.

As far as I can tell, nobody is listening. It is easier today to get a SW receiver in the US than Latin America. In the mid-60's, nearly all radios had the bands. Today, FM blankets nearly every country, many with national coverage nets that get, consistently and clearly, where no SW regularly got.

My main point is that most international broadcasts have no relevant material for residents of rural areas of Latin America as they do not relate due to social and educational considerations.

Little of the above are of interest to rural residents.

> I hear broadcasts to South America on religion, to many really!

That is the bulk of what is being heard.

> I have heard about the rain forest destruction and the changes in the
> lives of the people living there.

Zero interest to rural residents.

> I have heard about weather related news about storms and damage they
> cause.

Available much more specifically from local media.
>
> I have been to both coasts on Mexico and saw short wave radios around.
> Mexicans I spoke to knew what SW was. I'm afraid all I can offer is my
> experience on the pacific coast of Mexico and the Yucatan on the
> atlantic side to your more extensive travels in central and South
> America but at least the people in those places knew what SW meant.

But they don't use it. In the last year, in the Mexico City, Guadalajara and Monterrey ratings, there was not one mention of SW broadcasts as being listened to.... out of a sample of about 50,000 persons. This means that SW reaches less than 0.01% of listeners in these cities with a combined population of over 35 million.

The Atlanta Journal and Constitution
June 25, 1994
Mother slaps unruly son, is charged with a felony
Husband: 'She was simply disciplining a child'
By Bill Torpy

Nine-year-old Chuck Kivi was incorrigible while shopping with his mother at the Woodstock Winn-Dixie last month.

"He was running around and being nasty to his sister [Sarah, 12]; he kept picking and picking, saying hurtful things," Lynn Kivi said. "I told him, 'You don't speak to anybody that way.' He shot back, 'I'm not talking to you.' "

Kivi slapped Chuck's cheek. As they left the store and got in their car, a police officer approached. "He said an employee in the Winn-Dixie called and said I slapped my kid," she said. "I said, 'Yeah, I did. He was being rotten.'

"Another cop pulls up and tells me it's against the law in Georgia to slap your child,'' said Kivi, who moved here in 1992 from Illinois when her husband, Dale, was transferred.

Kivi was arrested, had mugshots taken, and was handcuffed and taken to the Cherokee County jail. She was charged with cruelty to children (a felony with a one-to 20-year sentence) and later released on $ 22,050 bond. Her husband, a marketing manager, cashed in his 401k retirement account to pay the bond and hire a lawyer.

"I'm disgusted with Winn-Dixie and with the police," Dale Kivi said. "They had no right to get involved. She was simply disciplining a child in need of discipline."

Woodstock police Chief Jimmy Mercer said he is surprised Kivi was charged with a felony. He said police are under great pressure in family abuse cases and that the difference between abuse and discipline "is a real fine line. Technically, you could do it [spank a child] on the bottom and get arrested.

"It could have just as easily been misdemeanor assault," he said. "The judge [Magistrate Kenneth Richards] saw enough cause to sign a warrant. If she's indicted, I'd be surprised."

Assistant District Attorney Dee Morris said he hasn't made a decision on the case.

The store manager said he thought customers called 911, but the police report said employees did.

The criminal warrant taken out by police says Kivi caused her son "excessive physical or mental pain" and that "this is a recurring event."

How did police know that? Chuck told them. "I get smacked when I am bad," he said, according to the arrest report. Chuck says he told police his mother "slapped" him in the store.

In 1990, proposed changes in child abuse laws brought an outcry from many legislators who said parents would be reported as abusers for spanking their children. The amended definition allows "reasonable forms of discipline . . . so long as any injury to the child is not more than minimal."

Kivi pointed out that Cherokee County schools - and many other school districts - use corporal punishment.

Mercer reasons that the officers and the magistrate pursued felony charges because the incident occurred in public and because Chuck was slapped in the face. He said police saw red marks.

"It aroused people enough that something bad happened, so they called," said Mercer, who said he has slapped his children, "but never in the face."

The magistrate could not be reached.

"This is persecuting parents for disciplining children," said John Earl, Kivi's lawyer. "One slap is not cruelty. Repeated slaps could be.''

======

A Google search for Lynn Kivi yielded about 15 hits. The story is a bit dated now as it happened about 11 years old now.

One of those hits was http://www.thenewamerican.com/tna/1994/vo10no16.htm and that article covers lots of things so do a search within it for Kivi.

Here are my comments from 3/18/05:

To all you who love Winn-Dixie and think they did right by calling the law on Lynn Kivi for slapping her incorrigible little brat named Chuck and getting Lynn charged with a felony so her husband had to cash in his 401K plan to post her $22,050 bond I have a suggestion - and a wish.

First, You can all send WD a $5 bill and tell them it is to help them get out of bankruptcy. IF there are enough of you the bankruptcy would soon be over.

Second, IF you are glad it happened, may the same thing, or worse, happen to you! :-)

Now, for those who think WD was wrong, you should spend your money some place else - ANY place else. IGA might be a good place to start if there is one close by. They don't sell your information because they don't COLLECT your private information. EVERYONE gets the same price whether you have a dozen cards or no card at all.

To those who cry about the massive big bad wolf called WalMart that is gobbling up all the little mom and pop stores, buy from a mom and pop place so they can stay in business. WD is NOT mom or pop! :-)

Al

Here is another account of it:

A widely publicized incident occurred in May 1994, when Lynn Kivi was shopping with her two children in a Woodstock, Georgia grocery store. Her 9 year old son proceeded to have a temper tantrum because his mother wouldnï¿½t let him abscond with store property. The temper tantrum lasted for a few moments when Mrs. Kivi smacked the boy in the face. A store employee attending to the family affair called 911, and police promptly arrested and charged Mrs. Kivi with felony cruelty to children. The mother was released from jail after her husband disposed of his retirement funds by posting bail for a $22,000 bond. The prosecuting attorney for Woodstock finally dropped the charges after several weeks in response to a national backlash.

Woodstock, GA is in the Atlanta area.

It seems that Winn-Dixie is pulling completely out of FOUR states and cutting back in several (? 4) others. They, while remaining in Georgia, are pulling completely out of the Atlanta area!

Wonder why! They've had about eleven years to reap what they've sown. It seems quite a few people don't like their "company policy"! :-)

I think we all should save our money so we can go to the final sale and buy up their equipment for pennies on the dollar! We all should be able to get a small piece of memorabilia. It may be sooner than we think.

I expect they'll be gone long before Krispy Kreme, even with the two "experts" who, together, are getting about $1,500 per hour -- to "save" Krispy Kreme from it's financial woes! :-)

Sorry, but it would be illegal to import or sell such a device in the
USA. That is the long and the short of why they are not for sale.

I have been doing some more research on "tone tilt" and found a
refference
that states that 75uS is the standard pre/de-emphasis for MW, and by
context HF. I thought 75uS was teh standard for non dolby FM broadcasts

in the US, and ~?50uS was standard in Europe.

Am I really that lost and there is a pre/de-emphasis for AM?

Terry

2116. Does AM MW/HF have a Pre/De-emphasis?

Source record: 25654

It is late and I have been up a little too long.
I have spent an hour wading through my reffrence books,
and the ITU web pages.

Earlier today I found a reffrence that states that the
"standard Pre/De-emphasis is 75uS", and implies that
this is also true for HF.

I thought that 75uS was for non-Dolby FM,50Us for US TV and
European FM and that MW/AM and HF/AM had no pre/de-emphasis.
Have I lost what is left of my mind?

I have been trying to decide on the best pivot point for my
tone-tilt. Craig at Kiwa used 700Hz. The best diagram I found
was from a guitar link and was designed to be used with spring
reverbs and had the pivot at 1KHz. I have been experimenting
and think I may have to have two, one for 700Hz for male voices,
and one about 1.4KHz for females.

Does anyone have and use a Kiwa MAP unit?
Is the 700Hz too low to be really efective on female voices?

Thanks
Terry

It's not quite as simple as that. All broadcast audio is processed. Here's a brief history:

http://www.bext.com/histproc.htm

Clear Channel is adopting IBOC and has developed a coincidental interest in reducing the bandwidth of AM audio:

http://www.rwonline.com/reference-room/iboc/05_rw_bandwidth.shtml

There might also be a station to station difference. Stations can process their audio differently.

AM is usually preemphasized as part of the audio processing. They do it to
more or less compensate for the normal frequency roll-off in the IF section.

The Radio Amateur's handbooks have some interesting articles about
increasing intelligibility in radio transmissions.

The older ones will have articles about AM ham radio transmissions.

>

You might want to consider a tube radio. A tube radio will get the best
performance from a simple diode detector. The diode detector works quite
well, except when the voltage across it gets low. As the voltage gets low,
the diode's equivalent resistance goes up rapidly. Working the diode at a
higher average voltage and into a high impedance load minimize these
problems.

In general, the consumer SW sets will sound better than the
communications/ham receivers.

I had the misfortune of finding one of those at the local Safeway store. I got the container home to find it had a few large scoops missing out of it. Some idiot of stocking person had helped themselves to the contents using a spoon from the kitchenware isle, then shoved the violated container at the bottom row of the freezer. I like getting the ice cream from the bottom row, because it's the coldest and survives the long drive home better.

I returned the container to the store immediately and they apologized profusely. I got a free (and SEALED) replacement.

Ice cream is serious business.

Source record: 25673

FM stations in the United Stated use a 75uS deemphasis while European FM
stations use a 50uS deemphasis. The reason for this is because the FM
transmitting stations use a preemphasis, boosting the transmitted treble
response above a certain frequency. The end result of this technique is a
better signal to noise ratio at the receiving end.
Without a deemphasis network in your FM receiver, the received audio would
sound trebly, similar to, but not exactly not like listening to a dolby
encoded tape on a non-dolby tape playback machine.
AM stations do not use any preemphasis so a deemphasis network after the
detector in your receiver is not required.
It is true that digital modes such as IBOC are being use on the MW band, but
this is a totally different technique.

Hi Terry,

Polypropolyne capacitors are the best sounding types for audio use, with polycarbonate following closely. It you take a look at the dissipation factor vs frequency characteristics, you will find out that the polypropolyne caps are the flattest in the regard.
As far as mechanical filters, you don't run into ringing with these units, but if the filters are not terminated properly they will not have a flat-topped response characteristic, and that can sound like ringing.
What I used to do if I didn't have the data on those old disc-wire filters was to either hook up a network analyzer or an LCR bridge (not the kind that is an extra function on those inexpensive multimeters) and measure the input inductance of the filter.
This would allow me to determine the value of the required I/O resonating capacitors. In addition to this, buy calculating the inductive reactance of the filter, I would be able to roughly calculate in I/O inpedance.
Nowadays, with the newer Torsional Mode filters, this is not required as long as you keep the strays in your PC board design below 30pF. The newer filters (especially the 526-9695-XXX series) have a 2k in/out impedance so you can use them where those Murata ceramic filters are used.

Contest - Accumulative.

As from new year 2005 the Nordic activity contest (NAC 50 MHz) will move from 4 th. tuesday in the month. As there have been a contest round for the last 14 years at the present date/time, we feel a valuable activity will be lost by moving it. Therefor the OZ50MHz Group have decided to establish an accumulative contest at the present evening so "business as usual" can be maintained.
To keep things as simple as possible, we will have rules very close to the NAC. This means an Open class high power and an Open class low power section, a OZ high power and a OZ low power section.

Contest calendar 2005.

January 25 th. 18-22 CET / 18-22 UT
February 22 th. 18-22 CET / 18-22 UT
March 22 th. 18-22 CET / 18-22 UT
April 26 th. 18-22 CET / 17-21 UT
May 24 th. 18-22 CET / 17-21 UT
June 28 th. 18-22 CET / 17-21 UT
July 26 th. 18-22 CET / 17-21 UT
August 23 rd. 18-22 CET / 17-21 UT
September 27 th. 18-22 CET / 17-21 UT
October 25 th. 18-22 CET / 17-21 UT
November 22 nd. 18-22 CET / 18-22 UT
December 27 th. 18-22 CET / 18-22 UT

Rules - Open class 2005.

Participants.
OZ50MHz Group hereby invites all licensed radio amateurs outside Denmark to participate in the OZ50MHz Accumulative Contest - Open Class.

Date & time.
Fourth Tuesday in every month - 19:00-23:00 CET/Danish local time. (Never at December 24 th. or 25 th.)

Section.
OCHP. Open Class 50 MHz - High power > 100 w.
OCLP. Open Class 50 MHz - Low power < 100 w.
Single and multi operators participate in same sections.

Contacts.
Each contacted station counts only ones even if it is /A, /P etc.
Duplicates must not be deleted from the log, but shall be listed as a normal QSO with zero (0) points. In case points are claimed for a duplicate QSO, ten times the claimed points will be deducted.

All operation in accordance with IARU Region 1 bandplans. No contacts via active repeaters or EME are allowed.

Exhange.
RS(T) and Locator, e.g. 59 JO55WW. No QSO no. is needed!

Points.
1 point/km + 500 bonus points per WWL.

Awards.
In the annual result only the nine best contests are evaluated. The first three stations in each section, and the best station in each country, will receive an OZ50MHz Contest Award.

Entries.
Logs must be received no later than a week after the contest at the OZ50MHz Group. Logs received later than that will be used as check logs.

Logs may be submitted electronically to the contest manager, oz50mhz@qrz.dk

O. Bjørn Madsen, OZ6OM
Falen 35, 3 tv.
DK-5000 Odense
Denmark

Results.
The contest results can be seen at http://www.qsl.net/oz7six/OZ50MHzResults.html

It's my understanding that there's no FCC standard for AM stations to preemphasize their audio, but nearly all do in order to compensate for the normal roll off. I have an old school high fidelity AM receiver, and AM stations usually sound rather shrill on the "Hi-Fi" IF bandwidth position.

A quick google search brings up:

"In 1977 Orban Associates introduced "Optimod-AM." This unit contained a high-slope receiver equalizer to pre-compensate for the highly rolled-off radios of the time, "

http://www.bext.com/histproc.htm

"and Omnia exclusives like a pre-emphasis section placed behind the multi-band limiters to create a more consistent, natural sound."

http://www.omniaaudio.com/am.htm

> It is true that digital modes such as IBOC are being use on the MW band,
but
> this is a totally different technique.
>
> Pete
>

I brought up IBOC because Clear Channel wants all AM radio stations to limit their audio bandwidth to 5 - 6 kHz. One of the reasons for the change was given:

"1. Increased modulation efficiency. By eliminating the broadcast of the high-frequency energy, we can increase the amount of energy that is in the 20 Hz to 5 kHz region. Let's not forget that due to pre-emphasis, higher frequencies are boosted and will have a more profound effect on total modulation than lower frequencies will."

http://www.rwonline.com/reference-room/iboc/05_rw_bandwidth.shtml

I don't know if the IBOC stations use a different preemphasis on the analog channel than the non IBOC stations.

You need a schematic, and check any capacitor going from the audio or
IF amplifier stages to ground...anyone one of these bypass capacitors
is bad, and you get the hum.

Frank Dresser wrote:

It's not quite as simple as that. All broadcast audio is processed.
Here's
a brief history:

http://www.bext.com/histproc.htm

Clear Channel is adopting IBOC and has developed a coincidental
interest in
reducing the bandwidth of AM audio:

http://www.rwonline.com/reference-room/iboc/05_rw_bandwidth.shtml

There might also be a station to station difference. Stations can
process
their audio differently.

Frank Dresser

I am aware of "standard" audio processing, but the refference giving
75uS on AM through me for a minor loop. Up too long and the old brain
was a little too fogged. I tried several local AM stations with 75uS
and 50uS
and they soundeed very muffled. The exact opposite of what I am trying
to do.

I do remember when WLW (700KHz) used to run real clasical music
programs on Sunday afternoon, and they clearly broadcast up to at least
10KHz. The cymbols were crystal clear. But that was 35~40 uears ago.

Count on it. I refuse to be fingerprinted and interrogated by any tourist destination I'd like to visit. The world is full of nice destination who like tourist dollars and don't treat you like shit at the borders or in their airspace. The economic decline of many US communities, near the border especially, is troubling to the local business people, but until you Federal Government stops it's totalitarian enactments, the money goes elsewhere.

Me? I'm not important or wealthy, but multiply what modest amounts I may spend by a million or so, the results become VERY noticeable. Sorry for your loss.

49% Say Bush Responsible for Provoking Iraq War
44% Say Hussein

Survey of 1,000 Adults

June 20-21, 2005

Who was more responsible for starting the War in Iraq
ï¿½Saddam Hussein or President Bush?

Hussein 44%
Bush 49%
RasmussenReports.com

June 23, 2005--Forty-nine percent (49%) of Americans say that President Bush is more responsible for starting the War with Iraq than Saddam Hussein. A Rasmussen Reports survey found that 44% take the opposite view and believe Hussein shoulders most of the responsibility.

In late 2002, months before the fighting began, most Americans thought that Hussein was the one provoking the War. Just one-in-four thought the President was doing the provoking at that time.

The biggest change in perceptions has come among Democrats.

In 2002, the party of Harry Reid and Nancy Pelosi was divided on this point. By a 49% to 34% margin, liberal Democrats at the time said Bush bore most of the responsibility. Conservative Democrats placed the blame on Hussein by a 54% to 30% margin.

Now, however, 78% of all Democrats say that Bush is more responsible for starting the War than Hussein. Just 18% take the opposite view.

Republicans, by a 76% to 17% margin, say that Hussein is responsible.

Among those not affiliated with either major party, 52% name Bush and 34% Hussein.

Demographic details available for Premium Members.

Rasmussen Reports is an electronic publishing firm specializing in the collection, publication, and distribution of public opinion polling information.

Our publications provide real-time information on consumer confidence, investor confidence, employment data, the political situation, and other topics of value and interest.

During Election 2004, RasmussenReports.com was the top-ranked public opinion research site on the web. We had twice as many visitors as our nearest competitor and nearly as many as all competitors combined.

Scott Rasmussen, president of Rasmussen Reports, has been an independent pollster for more than a decade.

The telephone survey of 1,000 Likely Voters was conducted by Rasmussen Reports June 20-21, 2005. The margin of sampling error for the survey is +/- 3 percentage points with a 95% level of confidence. 37% of survey respondents were Republican, 37% Democrat, and 26% unaffiliated (see Methodology)

I was actually playing around with the headers in Agent. All my posts have been that way for quite sometime. If you look in a group where my posts are older than 5 or 6 days, you won't see anything unless someone quotes or reponds. As far as trying to hide posts that I have made, I have not done that on purpose. It does not bother me that someone wants to bring up something that I wrote in the past. I also realized that those posts are archived elsewhere. The bottom line is that usenet is a very, very, small portion of the internet. It's constantly changing and in a few months no one remembers what was posted anyway. Usenet, by virtue off it's lack of moderation, is not a very efficient form of discussion. If you look at it as a whole, it's mostly off topic garbage. It's bound and determined to stay that way. All in all, I don't care if people read my messages from now until doomsday. That's what you put up with when there is no moderator.

No doubt. I remember the adjacent channel splatter some stations would put out back in the late 60s and early 70s. I don't think there was a specific FCC AM bandwidth restriction back then, the stations were just mandated to limit interference. The FCC's minimum separation between stations in the same market was 30 kHz, and some stations might broadcast a full 15 khz of audio.

When the FCC reduced the channel spacing to 20 kHz in the same market they also made a 10 kHz audio bandwidth limit official.

You could also bring this topic up in rec.radio.broadcasting. There are a few broadcast pros there who have hands-on transmitter expirence.

2161. OT: Krispy Kreme Saviors or Thieves?

Newsgroup: rec.radio.shortwave
Date: 2005-06-26 15:27:40 UTC
From: Al Patrick <arp@_NOSPAM_inet4u.com>
Message-ID: <11btibjrim0vrd6@corp.supernews.com>
Source record: 25699

The following clip came from:
http://www.findarticles.com/p/articles/mi_m3190/is_8_39/ai_n11833642

Scroll to the bottom and hit continue as it is from the second page, on my system.

"Executives Cooper and Panagos, chairman and managing director, respectively, at New York-based Kroll Zolfo Cooper LLC, are being paid a combined $1,455 per hour as part of Krispy Kreme's monthly payments of $400,000 for the services of the turnaround firm. Cooper concurrently is the interim chief executive at another embattled company, Enron Corp. Krispy Kreme also is paying the executives' out-of-pocket expenses and a $200,000 security retainer, a filing with the U.S. Securities and Exchange Commission said. In addition, a "success fee" for KZC that was under negotiation would be determined within 60 days of the Feb. 10 filing.

"The day after Krispy Kreme announced its cost-cutting initiatives and admitted to its need for cash, company shares crashed as much as 10 percent. At market close on Feb. 9, Krispy Kreme shares were down 73 cents, or 9 percent, to $7.21. Shares fell an additional 16 percent on Feb. 10 to close at $6.06, after hitting the new all-time low earlier that day of $5.85."

Notice: These two "saviors" of Krispy Kreme are getting almost $1500 PER HOUR! * * P L U S * * "...out-of-pocket expenses and a $200,000 security retainer" but they are there to SAVE the company from bankruptcy! Oh! For one of them this is a 'part-time' job as he is CONCURRENTLY employed in the Enron case, which probably pays him much more than the Krispy Kreme case.

How do they do it? They "laid off" 125 other workers so they could justify their own salaries. :-)

Let's See: $750 per hour (EACH - average) times 40 hours per week, if they work a whole week, equals $30,000 per week EACH. YES! That's right. THIRTY THOUSAND DOLLARS PER WEEK - EACH. ... "to try to save the company from bankruptcy"! Now, multiply that by 52 weeks per year and they EACH make about 1.5 MILLION dollars per year. But that's just part time work for at least one of them!

I'd hate to think what they'd charge if they were really trying to BANKRUPT the company! :-)

Just do a google search for "Krispy Kreme" & turnaround. Another interesting search might be "Krispy Kreme" & "success fee" which is

mentioned above. How much do they get paid if the company manages to survive in spite of their exorbitant salaries? In other words, 'We're trying to bankrupt you, but if you survive anyway, you'll owe us even more!'

[I'll save you the trouble of looking up their "success fee". A June 1, 2005 article said it has been postponed until next month "because KZC was 'immersed' in restructuring efforts." What this probably means is they have not been able to agree on how many millions Krispy Kreme will hand over to them!]

Krispy Kreme CFO 'Success Fee' Delayed

JUNE 01, 2005 -- WINSTON-SALEM, NC -- A negotiated "success fee" for Krispy Kreme CFO Michael Phalen has been pushed back until next month, according to a filing with securities regulators.

In a letter to Phalen, Kroll Zolfo Cooper general counsel Elizabeth Kardos said the deadline was extended because KZC was "immersed" in restructuring efforts.

Krispy Kreme is paying crisis manager KZC a $400,000-a-month retainer.

"We appreciate your indulgence and apologize for any inconvenience," Kardos wrote Phalen.

Krispy Kreme previously delayed success fees to CEO Steve Cooper and president Steve Panagos.

Even with all this, they just may be around when Winn-Dixie is long gone! Bye-Bye, W-D!

I believe this is a fairly recent phenomenon.
Is that true for all of Etons current offerings?
Which Tecsun radios are rebadged under Eton?
Is the latest and greatest E1 a Tecsun product?

Anders:
Check out thse links:

<http://home.worldnet.att.net/%7Ewa1sov/technical/sync_det.html>
<http://home.worldnet.att.net/~wa1sov/technical/allpass/allpass.html>
< http://home.worldnet.att.net/%7Ewa1sov/ver2/Software_Rado.htm>

The AD607 has a PLL built in and I don't know why this designer
didn't employ it instead of adding a NEnnn PLL. But at least it shows
one way to use the AD607.
I am presently using a ARRL BFO deign from the early 1970's that
works, but has developed some nasty drift issues in the 30+ years
it has mainly set idle. I am debating using 3 Epson programable
for the BFOs. I can either go with them running at 3 times the desired
Fout,
or hihger mutliples. At 13.nnnMHz the phase noise is on teh edge of
being too high,. but for less then 5MHz the phase noise is minimal. I
have a query
to Espon tech support to find out at which freqs they have minimal
phase noise. Supply them with +5 or +3.3V at 10mA and they give very
stable
Freqs. I have one 455KHz crstal, but it is sluggish in every circuit I
have
tried it in. I can get three of the Epson uints for less then a "good"
crystal.
I want one at 455.0000MHz and one at +1.300 and -1.300 KHz.
I am building this as a series of modules each in it's own Altoid Mints
tin.
A friend gave me a BIG Altoid tin that has more then enough space for
everthing.

Hi Jay

I have the Degen 1103 which is the original Taiwan version of the 1103. They are the exact same radio except the Kaito is the "American" version of the radio and has a better warranty and power supply.

If something goes bad with it, you have recourse. If you have the Taiwan version, what are you going to do? It will be a big hassle to get it fixed or replaced. But, they hardly go bad. There was an issue with the older ones where the line indicator "jumped" after a few months of use.

But, I think this is from charging the batteries in the radio. Get yourself a separate charger for it. They are cheap enough.

But, yes, the radio does everything they say it does. You'll be happy with it for sure.

Lucky

Yes, it's a fine little radio. Picks up SSB just fine but you must be able to move the BFO extremely, extremely fine to get the station in. Best thing to do is tune to a AM station first, zero beat it perfectly to get the hang of it, then try to get some SSB stations in.

I look at the 1103 as a mini tabletop receiver when I take it out. I paid $65 shipped off Ebay for it. Definitely worth it.

Yea they do. What cracks me up is there two days old. On the west coast you can go into any Mom and Pop donut shop first thing in the morning and get fresh warm donuts but when I moved to MN you play hell finding a donut shop like that. It's weird,you'd think they would be everywhere out here and a business like that here in winter you'd make fortune. Warm fresh donuts in winter or anytime is the best. Things like Krispy Cream are a marketing scam aimed at the same stupid yuppies that buy $9 mocha latte's or anybody else that's dumb enough to think there the best donuts on Earth.

I agree. You would think they would try and offer more features and options then the 1103. Why would someone want to get something worse not better?

I think the 1103 beats the other new Degen out the 1107. I'd stick with the 1103.

I will have to find the link, but last night I was digging around in
their
technical archives and I found a statement to the effect:"All domestic
AM BCB transmitters shall use a 75Us preemphaisis." I was looking
for the maximum analog BW a AM/MW station could use."

In the good old days class A stations could go with, I think up to
15KHz BW. I didn't feel like going to my parents and digging
through the 1955~1970 Popular Electroncs that had an article
on this issue.

I am trying to decide if I want to add a ~10KHz ceramic filter to
my outboard detector.
My fitler line up lloks like it will be:
500HZ crystal filter
2.1KHz crystal filter
3.8KHZ ceramic filter
5KHz ceramic filter
8 or 10KHz ceramic filter
(15KHz crystal filter for FM only!).
The FM will be designed and added later.

The audio will have 2 tilt tone control sections,
similar but with different pivot points. The first
centered at 700, the 2nd at ~1.4KHz. I hope to
decide if I can use one fitler with an ocatave
function, or if 2 fitlers in series will be better.
I would like to keep this simple enough for
someone other then me to use.

I am leaving the original audio chain in the R2000s
intact so that at there very least my wife will able to
use the "listening post".

A friend bought some "exotic" eletronic stuff from a
local engineering firm that went out of business.
Amoung the items were several NEDSP DSP
modules. See:
<http://www.bhinstrumentation.co.uk/html/nedsp1061.html>
I am trying to trade him out of at least one.
They are tiny, powerfull and don't mangle the audio
"too" much.

My "simple" outboard detector is undergoing
"mission creep".

Terry

My information might be outdated. Subjectively, though, I think I hear differences in different stations. I suppose other factors in the processing might account for any differences.

>

I'm almost certain that's true. Even 10 kHz of good audio isn't bad, but I don't hear much of that nowadays.

>
> I am trying to decide if I want to add a ~10KHz ceramic filter to

That only allows 5 kHz for normal DSB AM. Will you be limiting the wideband demodulation to the sync detector?

Contest - Accumulative.

As from new year 2005 the Nordic activity contest (NAC 50 MHz) will move from 4 th. tuesday in the month. As there have been a contest round for the last 14 years at the present date/time, we feel a valuable activity will be lost by moving it. Therefor the OZ50MHz Group have decided to establish an accumulative contest at the present evening so "business as usual" can be maintained.
To keep things as simple as possible, we will have rules very close to the NAC. This means an Open class high power and an Open class low power section, a OZ high power and a OZ low power section.

Contest calendar 2005.

January 25 th. 18-22 CET / 18-22 UT
February 22 th. 18-22 CET / 18-22 UT
March 22 th. 18-22 CET / 18-22 UT
April 26 th. 18-22 CET / 17-21 UT
May 24 th. 18-22 CET / 17-21 UT
June 28 th. 18-22 CET / 17-21 UT
July 26 th. 18-22 CET / 17-21 UT
August 23 rd. 18-22 CET / 17-21 UT
September 27 th. 18-22 CET / 17-21 UT
October 25 th. 18-22 CET / 17-21 UT
November 22 nd. 18-22 CET / 18-22 UT
December 27 th. 18-22 CET / 18-22 UT

Rules - Open class 2005.

Participants.
OZ50MHz Group hereby invites all licensed radio amateurs outside Denmark to participate in the OZ50MHz Accumulative Contest - Open Class.

Date & time.
Fourth Tuesday in every month - 19:00-23:00 CET/Danish local time. (Never at December 24 th. or 25 th.)

Section.
OCHP. Open Class 50 MHz - High power > 100 w.
OCLP. Open Class 50 MHz - Low power < 100 w.
Single and multi operators participate in same sections.

Contacts.
Each contacted station counts only ones even if it is /A, /P etc.
Duplicates must not be deleted from the log, but shall be listed as a normal QSO with zero (0) points. In case points are claimed for a duplicate QSO, ten times the claimed points will be deducted.

All operation in accordance with IARU Region 1 bandplans. No contacts via active repeaters or EME are allowed.

Exhange.
RS(T) and Locator, e.g. 59 JO55WW. No QSO no. is needed!

Points.
1 point/km + 500 bonus points per WWL.

Awards.
In the annual result only the nine best contests are evaluated. The first three stations in each section, and the best station in each country, will receive an OZ50MHz Contest Award.

Entries.
Logs must be received no later than a week after the contest at the OZ50MHz Group. Logs received later than that will be used as check logs.

Logs may be submitted electronically to the contest manager, oz50mhz@qrz.dk

O. Bjørn Madsen, OZ6OM
Falen 35, 3 tv.
DK-5000 Odense
Denmark

Results.
The contest results can be seen at http://www.qsl.net/oz7six/OZ50MHzResults.html

<analogdial@worldnet.att.net> wrote:

Sec. 73.44 AM transmission system emission limitations.

(a) The emissions of stations in the AM service shall be attenuated
in
accordance with the requirements specified in paragraph (b) of this
section. Emissions shall be measured using a properly operated and
suitable swept-frequency RF spectrum analyzer using a peak hold
duration of 10 minutes, no video filtering, and a 300 Hz resolution
bandwidth, except that a wider resolution bandwidth may be employed
above 11.5 kHz to detect transient emissions. Alternatively, other
specialized receivers or monitors with appropriate characteristics
may
be used to determine compliance with the provisions of this
section,
provided that any disputes over measurement accuracy are resolved
in
favor of measurements obtained by using a calibrated spectrum
analyzer
adjusted as set forth above.

(b) Emissions 10.2 kHz to 20 kHz removed from the carrier must be
attenuated at least 25 dB below the unmodulated carrier level,
emissions 20 kHz to 30 kHz removed from the carrier must be
attenuated
at least 35 dB below the unmodulated carrier level, emissions 30
kHz
to 60 kHz removed from the carrier must be attenuated at least [5 +
1
dB/kHz] below the unmodulated carrier level, and emissions between
60
kHz and 75 kHz of the carrier frequency must be attenuated at least
65
dB below the unmodulated carrier level. Emissions removed by more
than
75 kHz must be attenuated at least 43 + 10 Log (Power in watts) or
80
dB below the unmodulated carrier level, whichever is the lesser
attenuation, except for transmitters having power less than 158
watts,
where the attenuation must be at least 65 dB below carrier level.

(c) Should harmful interference be caused to the reception of other broadcast or non-broadcast stations by out of band emissions, the licensee may be directed to achieve a greater degree of attentuation
than specified in paragraphs (a) and (b) of this section.

The 1105 looks like a great pocket radio for the price. Right now, the only other "economy" pocket SW radio I can think of is the Grundig Mini PE100, and it's not a very good performer. The now discontinued Sony SW 100S was a fantastic pocket-sized radio, but at $400+ it was not an option for many consumers.

I think the 1105 fills an important niche in the SW market.

Hi Frank,

I didn't realize that.....I thought that the older AM stations took
greater pains to have flatter high frequency response. I do remember
listening to stations such as WGN on my old McIntosh MR-55, and they sounded
very good. The same stations on my Dynaco AF-6 tuner in its wide bandwidth
sounded shrill, as you describe.
As far as AM receivers, they do not have a deemphasis circuit following the
detector. With FM receivers, it is a different story.
Thanks for the info!

Pete

Yea, welcome to daytime shortwave in the Pacific Northwest. I'm reading
this at Noon (19:00 UTC) and thought I'd do a band scan. A couple of
Spanish language stations, and a bunch of "Chinese Opera" music jammers
from the PRC. There's Radio Netherlands (out of eastern Canada and
the Caribbean) on the frequencies that Telemon gives below, but
that's about it.

>> One thing I wanted to do, was copy activity on the ham bands. Today

>work well for you. Then they will switch to 15,515 at I think 02:00UTC.

17795 starts at 23:00, ie 4 PM.

>You should get the BBC really well on 5,975 evenings and radio
>Netherlands broadcasts should come in well.

BBC on 5975 is only coming in well on the 8 PM (3:00 UTC) hour, here.
in Seattle. If you stay up late enough, 15360 starting at 10 PM (5:00
UTC) gets stronger as the night goes on. And then sometime early

in the morning switches to 9740, which comes in well until 9 AM PDT.
For Radio Netherlands, try 9845 at 5 PM PDT, often a bit weaker at 6 PM
on the same frequency.

>Daytime 19:00 to 20:00 UTC

>Evenings radio Netherlands is on for one hour at 04:00 UTC on 6,165 and
>9,590. Both of these should be strong signal for you.

6165 is often my strongest available signal at that time. IF the Vancouver,
BC CBC-1 station on 6160 hasn't gone off the air yet, there's a bit of
interference.

...

>RHC Cuba is another big signal on many frequencies and so is RCI radio

But in effect, almost every AM receiver has de-emphasis -- it is the result of the "haystack" amplitude response of their RF/IF circuits driving the 2nd detector. Higher modulating frequencies are rolled off, sometimes very severely.

The problem with trying to compensate for it at the AM tx is that the amount needed for "flat" system response varies considerably from rx to rx, and even with carrier frequency. Even so, many MW/SW AM stations do boost their highs, trying to get some of it to pass through the narrowband receivers typically in use these days.

Hi Mike!

But the 1103 is pocket sized. I can carry it around in the back pocket of my pants very easily. It will even fit sideways into some shirt top pockets if they are a little bigger then usual. The antenna folds up very tightly and neatly and most of the time you don't even need to extend it with MW and FM.

And, for a price of $65 shipped, while the 1105 is $62, I don't see why anyone would want one over the 1103.

The 1105 is limited to 5.8-2.6 SW while the 1103 is .30 to 30MHz **PLUS does SSB all for the price. I can't even see the reason Degen came out with it if they are going to price it at the same price as the 1103.

The ONLY option I do like on it is it needs only 2 AA's while the 1103 needs 4 and I can see some people that are into really tiny portables. The smaller the better.

Also, it has 1000 memories as opposed to 256 on the 1103. Who needs 1000 frequencies imo for a portable? 256 frequencies on file is not enough? Again, the size diff is not trememdous. I'm looking at price/performance.

SSB can be fun. Why not have it also?

Lucky

Program raises spying concern

STATE NATIONAL GUARD UNIT SET UP TO DETER TERRORISM MONITORED ANTI-WAR RALLY

By Dion Nissenbaum

Mercury News Sacramento Bureau

SACRAMENTO - Three decades after aggressive military spying on Americans created a national furor, California's National Guard has quietly set up a special intelligence unit that has been given ``broad authority'' to monitor, analyze and distribute information on potential terrorist threats, the Mercury News has learned.

Known as the Information Synchronization, Knowledge Management and Intelligence Fusion program, the project is part of an expanding nationwide effort to better integrate military intelligence into global anti-terrorism initiatives.

Although Guard officials said the new unit would not collect information on American citizens, top National Guard officials have already been involved in tracking at least one recent Mother's Day anti-war rally organized by families of slain American soldiers, according to e-mails obtained by the Mercury News.

Past abuses recalled

Creation of California's intelligence unit is already raising concerns for civil libertarians who point to a string of abuses in the 1960s and 1970s, when the military collected information on more than 100,000 Americans, infiltrated church youth groups, posed as reporters to interview activists, monitored peaceful protests and even attended an elementary school Halloween party in search of a ``dissident.''

``The National Guard doesn't need to do this,'' said Christopher Pyle, a former Army intelligence officer who first exposed the military's domestic spying operations in 1970. ``Its job is not to investigate individuals, but to clear streets, protect facilities and help first responders.''

Top Guard officers said they have no intentions of breaking long-established rules barring the military from gathering information on Americans and that the evolving program is meant to help California and the nation thwart terrorist attacks.

``We do not do any type of surveillance or human intelligence or mixing with crowds,'' said Lt. Col. Stan Zezotarski. ``The National

Guard does not operate in that way. We have always had a policy where we respect the rights of citizens.''

Generally, the National Guard is called upon to help the state deal with natural disasters and riots. But the wars in Iraq and Afghanistan have put major strains on the military, which has started drawing more on Guard soldiers to fight overseas. And now Guard units are being integrated into anti-terrorism efforts in the United States.

The intelligence unit was quietly established last year by Maj. Gen. Thomas Eres, the National Guard leader who was forced by the Schwarzenegger administration to retire this month amid allegations that he failed to prove his shooting skills for a trip to Iraq, set up a questionable military flight for a Republican friend's political group and improperly used money meant to stem the flow of drugs for anti-terrorism programs.

Right before Eres retired, the Guard hired its first director for the intelligence unit who has ``broad authority'' and is expected to ``exercise a high degree of independent judgment and discretion,'' according to the job description obtained by the Mercury News.

``However, highly controversial or precedent-setting decisions, directives and policies are discussed with the appropriate senior leadership prior to implementation,'' the description states.

A one-stop shop

Col. Robert J. O'Neill, a veteran intelligence officer who started last week as director of the new program, said he envisions his team as being a one-stop shop for local, state and national law enforcement to share information. Intelligence officers will have access to sensitive national security information that they can analyze and potentially share with state and local law enforcement, he said.

``We are trying to integrate into their systems and bring them information that they don't have,'' O'Neill said.

He said his unit would not cross any legal lines into spying on Americans. But the Guard's role in monitoring at least one demonstration has already alarmed civil libertarians.

Last month, a group of anti-war activists, including the parents of American soldiers killed in Iraq, held a small Mother's Day rally at the Vietnam Veterans Memorial near the California Capitol to call for the return of all National Guard troops by Labor Day.

Three days before the rally, as a courtesy to the military, an aide in Gov. Arnold Schwarzenegger's press office alerted the Guard to the event, according to e-mails obtained by the Mercury News.

The information was passed up the chain of command directly to Eres and other top Guard officials including Col. Jeff Davis, who oversees O'Neill's operation.

E-mail reveals actions

``Sir,'' Guard chief of staff Col. John Moorman wrote in the e-mail to Eres that was copied to Davis and other top commanders. ``Information you wanted on Sunday's demonstration at the Capitol.''

In response, Davis indicated that Guard intelligence officers were tracking the rally.

``Thanks,'' Davis wrote. ``Forwarding same to our Intell. folks who continue to monitor.''

That rainy Sunday, the protest organized by Gold Star Families for Peace, Raging Grannies and CodePink drew about three dozen supporters.

Guard spokesman Zezotarski said the monitoring did not involve anything more than keeping tabs on the protest through the media and that no one went to observe the demonstration.

But he said the military would be ``negligent'' in not tracking such anti-war rallies in the event that they disintegrate into a riot that could prompt the governor to call out troops.

``It's nothing subversive,'' Zezotarski said. ``Because who knows who could infiltrate that type of group and try to stir something up? After all, we live in the age of terrorism, so who knows?''

Civil libertarians scoffed at such defenses.

``That's ludicrous,'' said Joseph Onek, a former Carter and Clinton administration official who now heads the Liberty and Security Initiative for the Constitution Project at Georgetown University. ``That's not what the American people expect its military to be doing.''

Pyle, the Army officer who exposed the abuses in the 1970s and is now a professor at Mount Holyoke College in Massachusetts, said that the evolving intelligence programs are susceptible to dangerous ``mission creep'' that led to overaggressive tactics during the Vietnam War.

Since the Civil War, the United States has tried to create firm barriers preventing the military from getting involved in domestic issues. The 1878 Posse Comitatus Act prevents the U.S. military from taking part in domestic law enforcement.

Military role expands

The Army got involved with collecting intelligence on Americans in the 1960s when it was called in to deal with civil rights protests and riots. Its role expanded as the decade wore on and the anti-Vietnam War movement grew more confrontational.

At the time, according to congressional records, the military collected files on more than 100,000 Americans and embraced aggressive tactics to try to undermine anti-war groups, including attending a Halloween party for kids and infiltrating church youth groups.

In response, Congress and the military set up new rules to strictly regulate military spying in the United States.

But the Sept. 11 attacks raised concerns that the controls had gone too far. Since then, the FBI and military have been expanding their intelligence operations.

The notion of creating intelligence ``fusion centers'' is slowly gaining momentum. Massachusetts is setting one up, but it is housed in the state police headquarters, not its National Guard.

Currently, federal law allows the U.S. military to gather information on Americans under exceptionally tight restrictions. The intelligence must be essential to their mission, publicly available or related to national security issues.

The Pentagon has created a new operation in Colorado known as the Northern Command to help protect the nation from terrorist attacks. Its leader, Gen. Ralph Eberhart, raised some concerns among civil libertarians last year after telling a National Guard group that ``we can't let culture and the way we've always done it stand in the way'' of gathering intelligence.

Last year, the U.S. military came under fire after it was reported that two Army lawyers in civilian clothes attended a forum on sexism in Islam and later demanded a roster of those in attendance, along with a videotape of the conference, after being questioned by three Middle Eastern men during the event.

Army officials said the attorneys had ``exceeded their authority'' and ordered a refresher course for agents.

> (pacbell.net)is no good.

As you say "long time"
As of end of the year 2004 all older passwords went off for access to
the ILG-radio files..
You have to renew your access data by asking for a new PW and username.
PW usually is the IP-adress your request is coming from. The username is
generated from Bernd's system.
Maybe there where too many dead accounts in Bernd List or the old list
went lost on a
datacrash or something else...
So if your access datas were older than of dec.2004 you surely need new
access datas.
Use the request-form on the ILG-radio website.
In some cases it may need some days up to 4 weeks to get the new account
datas from Bernd.
But for sure you got some actual files already from someone else, don't
you?

Frank Dresser

I meant 20KHz for 10KHz recovered audio bandwidth.
I have some nice, but wide older Murata ceramics I salvaged
30 years ago from a (then) high end Kenwood tuner AM section.
I have them in a 35mm film cansiter labled 10KHZ. Sorry for
the sloppy thinking. It had a wide/HiFi positions as well as a
naorrow/distant positon. The "narrows" are like barn doors,
maybe 14~15 wide fora 6~7KHz signal, and the "wides" are
~21 wide giving just over 10KHz.

In a way it will be nice to use all this junk I have saved for the
last 3 decades.

Let's try that again.....AM receivers don't have a deemphasis
circuit. You can state that the composite response of an AM receiver implies
a deemphasis circuit, but that is not really true if you consider a
deemphasis circuit as having a standard turnover frequency and a standard
rolloff characteristic (so many dB per octave). (I do understand your point,
though).
A deemphasis circuit, as applied after the detector in FM receivers is
designed to have a specific rolloff characteristic that is the complement of
the preemphasis characteristic applied at the transmitting end.
This holds true for broadcast stations as well as land mobile equipment.
Take a look at any of the more recent stereo FM tuners/receivers and you
will see that this characteristic is determined by the external components
in the line amp of the stereo decoder chip.
A TDA1591 data sheet gives a good example of this circuit.
And you are right.....it would be very difficult to have a standard
preemphasis curve for AM stations, because there are so my receivers with
different characteristics because of different I.F. bandwidths and different
rolloff characteristics in the audio chain.

Hi Boozer,

you seem to be spot on about these things since I have witnessed them first hand . And now China does want to buy out Unocal. Like one Senator said, "Would China allow the U.S. to buy out one of it's major companies"?

We all know the answer to that question don't we? The CCP must be laughing at how easy this all is. They are laughing at the people they are paying off knowing that one day they will take it all back. What fools they must think we are and they would be right. Corrupt greedy fools.

Doesn't the U.S. see the future of their future limited vendors for sensitive military needs? If they do and allow it to happen, it boils down to money, bribes and corruption in our gov't. The sad part is these people think they will keep on going on with their greedy practices until they wake up to find out their world and themselves are now controlled by a foreign gov't and country.

It's very frustrating and sad that the U.S.A is falling from grace and is now mainly a service orientated financial economy. How are they going to use that to control their side of the world?

It's hard to sit back and watch it just move from the way it used to be to the way it is now.

The US citizens are slowly losing all their rights as seen by the supreme courts last ruling of allowing PRIVATE interests to take your real estate away from you. I still can't believe this. HOW, how in the United States of America, can the HIGHEST LAW IN THE LAND say this is "OK"????

For PRIVATE INTERESTS?I just can't believe it. IF they do not overule this, and it becomes law, I thing a wise move might be selling your real estate while you still have control of it and leaving the country.

Cause if the Supreme law of the land says this is OK to do to the citizens of this country, I no longer feel I'm living in a free state. And, if the

people will not do anything about it and fight it, then I don't think we need to stay around and go down with a bunch of sheep.

This is so scary to me you have just can't imagine. Also, to be able to check public and retail records to see what books you buy and take out from the library is just freightening. This is a dictatorship. This reminds me of how the nazi's operated and gained control.

What is happening to privacy in this country that soldiers gave their lives for?
So it all meant NOTHING which means this world means nothing now. Seems to me I won't be suprised to see forced laws and rules on us individually. Our country is straying farther and farther from the constitution.

See how they marched in the streets of the Ukraine recently. Why them and not us? If nothing happens to overturn this ruling, they must be putting something in the water, food or air. Cause I can't imagine logical thinking Americans doing nothing about it. We shall see. We shall see if Congress and the Senate are not outraged by this. If they aren't we know the fix is in deep.

Lucky

If you have access to a spectrum analyser you can see what the transmitted bandwidth is for some stations. You will find that many transmit a lot more than what most radios pass.

For a real shock, look at the spectrum of an AM station transmitting IBOC. You will want to have a narrow filter available to avoid passing the digital hash.

I've had one BCL2000 and an S350 and I found that despite the good sensitivity, the tuning backlash, the drift, and the single conversion birdies were totally unacceptable on both. My old DX-396 (also single conversion) is definitely superior but not quite as sensitive. Runs forever or 2 "C" cells.

In the US, broadcast AM pre-emphasis is defined by a voluntary standard of the Nat'l Radio Systems Committee. The tx audio response is a modified 75 us curve. The curve has an 8700 Hz break frequency to reduce adjacent channel interference.

The NRSC standard expects the amplitude response of the narrow RF/IF bandwidth of "typical" MW broadcast receivers to restore ~ flat system response, not that a network complementary to that at the tx be added to audio circuits following the 2nd detector. However that is not prohibited -- it is just more expensive. Also, that approach to implementing AM pre/de-emphasis would not be "backward compatible."

RF (retired broadcast field/systems engineer -- RCA & Harris Corp)

The best sounding radio I ever had was to connect a good audio
amplifier and speakers up to a crystal radio. There were several local
stations that were very strong signal on this radio and it sounded
fantastic. Never heard anything better since. This was using a real
crystal and cat whisker not a diode in a package. Not much there to
limit the audio response except the Q response curve of the tank
circuit. No filters at all just antenna wire and ground into the tank
circuit followed by the detector and then audio amplifier with speaker.
No need for a fancy design.

http://abcnews.go.com/Technology/wireStory?id=883545

BOSTON Jun 26, 2005 - Customers of XM Satellite Radio Inc. aren't the only ones who appreciate its digital quality and nationwide coverage. The U.S. military might draft XM's service for homeland security purposes.

XM and Raytheon Co. have jointly built a communications system that would use XM's satellites to relay information to soldiers and emergency responders during a crisis.

The Mobile Enhanced Situational Awareness Network, known as MESA, would get a dedicated channel on XM's satellites that would be accessible only on devices given to emergency personnel. The receivers would be the same as the portable ones available to consumers, with slight modifications to make them more rugged.

The military often leases transmission space on commercial satellites, but this collaboration between a massive defense contractor and a fun-loving radio network XM's first two satellites were dubbed "Rock" and "Roll," and its next two might be "Rhythm" and "Blues" is unusual.

It began last year when engineers with Waltham, Mass.-based Raytheon Co. were looking for an inexpensive system that would help emergency responders and soldiers coordinate their actions after a natural disaster or terrorist strike. Existing communications systems for such scenarios can be bulky and expensive.

Commercial satellite radio receivers, in contrast, are lightweight, battery-powered and cost as little as $99. Their digital transmissions have enough bandwidth to carry maps and other imagery, which would be displayed on portable computers that plug into the satellite receivers. And the system can be programmed to relay information just to specific devices if need be, so individual users can get messages appropriate to their regions.

While XM's service only reaches North America, Raytheon has signed on with Worldspace Corp., a satellite radio provider in Africa, Asia and Europe, for global coverage. That system debuted in March during tsunami relief efforts in Asia, when Raytheon and Worldspace gave satellite receivers to aid agencies to coordinate their activities, said Mike Fleenor, the MESA program manager at Raytheon.

Even before that, MESA's domestic potential had attracted the interest of officials at U.S. Northern Command in Colorado Springs, Colo., which is responsibile for homeland security missions. That got MESA included in this month's Coalition Warrior Interoperability Demonstration, an

annual event in which technology vendors show their wares to U.S. and allied military brass around the world.

During test runs at the event, images, data and audio were sent to an "injection point" at Washington, D.C.-based XM. The transmissions were relayed to space and then sent back to the portable devices that would be carried by personnel in the field.

Official assessments of MESA and other technologies shown at the demo will take months, and procurement decisions will likely come next year. But early reviews of MESA were favorable, said Christopher Lambert, Northern Command's deputy program manager for the demonstration.

Lambert said he could envision the system being useful not only for disasters but also for everyday police uses. For example, an undercover cop could have the system in his car, masked as a regular XM radio most of the time, but ready to receive messages from headquarters with the flip of a switch.

Though XM's selling point is its 130 nearly commercial-free channels of music, sports, news, talk, traffic and weather, it has waded into public service before.

XM and rival Sirius Satellite Radio Holdings Inc. each have a channel reserved for emergency broadcasts and carry Amber Alerts for missing children. After hurricanes ravaged Florida last year, XM and Sirius donated free receivers so people could get weather updates.

XM spokesman Chance Patterson said it's too early to say how much revenue MESA could bring the company, which has nearly 4 million subscribers but has struggled to become profitable. XM lost $642 million last year.

"It would easily pay for itself," he said.

Nicely done Dr. David. Impressive poll results even they are over one year old.

Now, to garner additional Party brownie points, please post similar polls or facsimile of citizens of Germany and Japan after the Ally victory of WWII.

Bonus: What would be your thoughts of the answers to this Iraqi poll of Chinese citizens if
they had successfully toppled the Communist dictatorial regime in June 1989?

My Degen DE1103 (same thing) is, in my opinion, the best portable
for money spent.
Many have complained about the ergonomics of the volume
control and horizontal number key layout. That's a personal like or dislike.
It took me about five minutes to adapt to them. I love mine DE1103
Very sensitive off the whip on SW, great sound from such a small unit
Good MW and FM reception.
If I could keep only one portable I own it would be the 1103. And yes,
I own a YB-400 and 7600GR.
Note: Degen made improvements to the 1103 in the second half of 2004.
I waited until then to get one and couldn't be happier.
There's been a ton of discussion in this newsgroup about this radio and all
Chinese portables. I fully expect criticism for my opinion, but
I also know for every negative post there's been a positive one.
Consider joining the Yahoo 1103 group and see what owners have to say.
http://groups.yahoo.com/group/kaito-de1103/ Posts go back to Jan. 2004
Note 2: the Kaito model will work on American current with no step-up
transformer needed, the Degen needs 220 volt and the transformer. I use
only rechargeable batteries and my own personal charger to power the
radio, not the optional adaptor offered by at least one eBay seller. The Degen
is cheaper, but the Kaito comes with an American warranty and the ability
to use household current with no transformer. Warranty service on the
Degen would be tedious at best. Peace of mind dictates that many opt for
the Kaito version. I took a chance on the Degen because I've never had
a problem with orders from eBay seller Liypn. But... I didn't get and don't
use a 220 volt transformer. I'd say if you get one and can afford the extra
money for the Kaito 1103 get that one.
Buzzygirl, if you're out there chime in on this if you care to. I know you like
your 1103.

I agree with everything you said, Sanjaya... the KA1103 version, while a bit more costly, would allow for some piece of mind in the unlikely event you'd need to return it to the seller.

I do enjoy my DE1103 a lot. It's very sensitive off the whip, and sounds great. I've had lots of portable SW radios, and this is one of the best deals going in its class.

Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.cb

(This is from eham.net and qrz.com)
Glenn A. Baxter, P.E., K1MAM, (or as his parter and buddy Chris Murdoch, WA1HOD, calls him - K1MAN-kind) has a long long history with the FCC. For those of you just joining the debate, here is some information that might help explain why so many hams are eager to sign the Petition to Deny License Renewal to K1MAN at www.no2k1man.com

K1MAN, by his own actions, has made himself a very public figure. As a public figure, he's been widely discussed by his fellow hams here, on QRZ, and elsewhere on the internet, on amateur radio, in court rooms, discussed by his employers, his neighbors, discussed by the FCC, at CBS, and by the Department of Justice.

In reviewing the history of K1MAN and his qualifications to remain a Commission licensee, we can go back many years, to May of 1986, when he sued the advertising manager of QST and another employee of ARRL for conspiring to damage his business reputation.

QST had received a complaint that showed that Baxter's Collins Repair and Alignment Service had significantly overcharged a customer beyond an amount they had previously agreed upon.

The advertising manager at the time wrote Baxter on QST letterhead, saying, "When your service charges escalate from $75 to $225 and then to $275 we become very much concerned about the manner in which you are treating our members. You will recall that I discussed with you ... the highly suspect illegal spending of deposits which members were sending to you... unless you can convince me that your operation exists in the best interests of our members, we shall be unable to carry further advertising from you."

This exchange and the subsequent lawsuit by Baxter (dismissed) may help to explain why Baxter has attacked the ARRL and its staff with such zeal over the years. He says he wants to make IARN an "Alternative to ARRL" but, discerning readers may recognize another agenda.

Some old timers may recall Baxter's lawsuit against the FCC to maintain the old AM power output of 1,000 watts. That lawsuit was dismissed because Baxter failed to exhaust administrative remedies through the FCC before bringing suit. As the old adage goes, it appears there really is a drawback to acting as your own attorney.

You may also recall Baxter's 10 million dollar lawsuit against the FCC? He claimed he was defamed by the alleged suggestion by Riley Hollingsworth that he was shut down by the FCC. Baxter reported at the

time that he had merely taken a break to teach high school. This case was also dismissed because Baxter failed to exhaust his administrative remedies before bringing suit. Baxter has threatened to sue Riley personally, as well as other hams, including this writer. A threat that has yet to materialize.

On January 23, 2003, Walter Cronkite's attorney wrote to Baxter asking him to stop using Walter's voice ID over K1MAN's bulletin. "Mr. Cronkite previously requested that you refrain from any further use of the audiotape, or from any suggestion that he endorses your station, Association, or other operations." He (Ronald S. Konecky) went on to call Baxter's actions "a violation of Mr. Cronkite's rights, totally improper, and a cause of serious damage to his name and reputation."

Baxter's actions, have not endeared him to CBS, The Maine Department of Justice, Walter Cronkite, the FCC, or the countless hams who have complained about Baxter's relentless interference to their ongoing communications.

When Baxter began to send out his self-styled notices of Felony Affidavit Complaints to those he perceived as interfering with his bulletin service, it really hit the fan.

On January 5th, 1995, Jay McCloskey, the U.S. Attorney at the Maine Department of Justice wrote to Baxter, telling him, "It is against the law to write and mail this type of threatening communication, especially when it has no basis in fact. If you continue sending this type of letter, you may be subject to Federal criminal charges for misrepresentation and for using the mails to make threats. You may also jeopardize your amateur radio license; the FCC can use evidence of this type of conduct to demonstrate that you no longer meet the character requirements for a license."

Baxter responded to this letter on January 9, 1995 by writing to the Assistant US Attorney, stating, "Your blatant and malicious abuse of the power vested in you by the citizens of the United States is despicable, unethical, criminal and unprofessional." Baxter went on to demand a retraction, which, of course, he never received.

Baxter has hardly endeared himself politically to the members of the Maine Department of Justice, but the lack of political goodwill doesn't stop there. On January 23, 1995, FCC Counsel John Greenspan wrote to Baxter regarding an insulting letter he wrote to the Assistant US Attorney, "Your reply suggests to me that you may very well lack the character qualifications to be an FCC licensee. You certainly lack the maturity, but that is, unfortunately, not grounds for revocation. If it is ultimately determined that you have made improper threats, that determination could result in a hearing to examine your fitness to remain an FCC license and/or criminal prosecution."

John Greenspan went on to add, "Although you have not used lawyers in the past, I suggest that you consult with an attorney knowledgeable in

FCC procedures about your alleged conduct. To provide some incentive for you to do this, let me say that if you wish to speak with me for any reason, it must be through an attorney. I will not accept any calls or letters from you personally."

Not exactly a love letter is it?

Over the past 5 years Baxter has been contacted by the FCC on numerous occasions and his station has been inspected by the FCC. Baxter says he has received FOUR (4) NAL's to date. The FCC has writtent to him about allegations of broadcasting, deliberate interference, failure to identify, poor signal quality, erratic starting and stopping times, recording conversations without permission, and the list goes on...

Even Baxter's neighbors are not immune from his tendency toward trying to use the courts to settle what some might consider silly disputes that would be better handled by a personal phone call. More often than not, Baxter has lost in the courts due to procedural defects in his lawsuits. He is not, contrary to a popular myth, fabulously wealthy, or a lawyer.

According to staff at the IRS, his IARN charity did not even make enough money to require that he file taxes last year. An underfunded organization like IARN that engages in irresponsible activities like calling for jump teams to visit disaster areas who don't even request assistance, does not seem to me, to be an alternative to the ARRL, except perhaps in the mind of Mr. Baxter.

On May 4, 1983, Baxter sued a neighbor of his, Camp Runoia, a camp for little girls, because they stacked cordwood on the side of the road. The case was dismissed. The camp had removed the wood prior to the case being heard.

Baxter's other neighbors have apparently also had reason for concern regarding his allegedly threatening behavior. According to reports gleaned from court records in December of 2003, Baxter was dismissed from his job (fired) as station engineer for FM 95.3 in Augusta, Maine. When he applied for unemployment compensation, the attorney for the station advised his clients not to attend the unemployment hearing.

"Because Mr. Baxter has demonstrated offensive behavior similar to that which prompted his termination, I have advised the Bouchards not to attend Monday's hearing. I indicated to you in our conversation that the Bouchards' fear for their safety as a result of Mr. Baxter's threatening behavior. Mr. Bouchard terminated Mr. Baxter from employment when Mr. Baxter repeatedly acted in a threatening manner to his supervisor and to other employess at the job site.Mr. Baxter demonstrated his inability to act responsibly and to exert self-contol at the last hearing."

The attorney (Robert J. Stolt of Lipman, Katz & McKee) goes on to say, "Payments of benefits to Mr. Baxter is a lesser evil than someone being harmed by him."

Baxter sued regarding these comments, but the court held that the comments made by the attorney were completely privileged in nature and were therefore protected by law.

Ironically, Baxter's objections have ensured that they will reside in the annals of the Maine courts in perpetuity, for anyone with the desire to read them.

For all of these reasons, and the reasons in the present NAL, I will sign the petition to deny license renewal to K1MAN. I don't believe K1MAN is capable of engaging in good Amatuer practice, as we are all compelled by law to do.

Although I hold no malice toward Mr. Baxter personally, and I believe him when he says he suffers from mental illness, I believe that Mr. Baxter has already amply proven that he does not deserve to remain a Commision licensee.

K1MAN has pending enforcement issues. K1MAN has already been warned by the FCC that he may be referred to the ALJ due to ongoing enforcement issues.

K1MAN's renewal anniversary is on October 17th of this year. Here is an excerpt from an FCC letter to K1MAN dated January 29, 2002.

"The rules of the Amateur Service are straightforward and easy to understand. To the extent that you do not comply with Commission rules regarding the Amateur Radio Service, then to that extent enforcement action will be taken against your licenses. That enforcement action may include revocation of your station license, suspension of your operator license, a modification proceeding to restrict your operating privileges, or monetary forfeiture.

It is also important for you to understand that if these matters are not resolved, your operator/primary station licenses will not be routinely renewed; but instead will be designated for hearing before an Administrative Law Judge. In such a proceeding, you would have the burden of proof to show that your licenses should be renewed."

It's time for Baxter and all of his associates to stand before a Judge.

Thanks for the heads up! I've been lurking here. I've been using last June's database. Somehow, I thought database updates were automatic with my Ergo 4.0 control system. Now I know to check in and update my ILG, WHAM and any others you can recommend.

No but I am sure you're an idiot. Go to Europe sometime and
travel from one country to antother and see if you get stopped at the border
and have your papers checked to see if you'll be allowed in their country.
Why is the US the only country that will let any derelict come into this
country for virtually no good reason??? If you cant see the logic of
having controlled borders, especially these days, you're beyond hope.

I agree.....still, you don't see a deemphasis network actually following the detector in AM receivers. Are there many stations actually using the curve?

Perhaps their new liquid doughnuts will revive their fortunes. Here in the North, we were downright disgusted when Wendy's bought out Tim Hortons. One of hte first things they did was start making the doughnuts in a central location and trucking them nation wide. They also made them noticeably smaller. That was horrible. I suspect they put Cocaine in the coffee to keep the customers coming back without actually knowing why.

Telamon's favourite station is coming in very well on 15.720
Radio New Zealand International.

04:30 GMT

An email QSL card card may be received by filling out reception details here:

http://www.rnzi.com/pages/qsl_web.php

just putting a newly acquired Kenwood R1000 through the paces. I bought it today in a used but nice condition. The seller knew nothing about it but the price he wanted. There wasn't any wire around for an antenna, So I took a chance on it working.

I got it home, hopes all raised. I cleared some space in the middle of the mummified orange peels, dried out ball point pens and scsi cables running around to my antique tape backup and scanner. The receiver now placed, I connected the antenna and ground. The power button was pressed, to much anxiety and anticipation.

Nothing. Absolutely nothing. I hadn't been so disappointed since Santa started bringing lumps of coal on a perennial basis.

I started turning the radio around, looking at how many screws I had to pull out to get the cover off. That's when I noticed the sliding antenna switch, which was in the wrong position for the terminal I had connected the wire to.

I just KNEW things would be good...and they were...

So far, the performance seem very close to the Ten Tec 320. Sound quality is very nice, but it's not a fair comparison as the computer speakers are not very good. I should connect the same decent speaker to both and get a real comparison.

The S meter seems optimistic, but i have only the on screen Ten Tec meter to compare it to. That doesn't work, as the markings/scales are different.

I'm happy. It's been a good day. I hope the FRG7 doesn't get upset with this new fangled stuff in the house. It was pretty shaken when I brought the Yaesu 9600 home.

It is, when you can only work a couple hours a day! I can always use
1 GB or larger hard drives, memory and modems. I get plenty of monitors
and printers, even though most of the printers are missing the ink
cartridges so its a real pain to test them. I asked for empty
cartridges that I could refill on the Ocala Freecycle group, and was
asked to unsubscribe because they don't believe anyone would repair and
give away computers.

If you take I-75 to Tampa you pass a couple miles from my place in
Ocala. I'm about 10 miles from either the Hwy 200 or Hwy 484 exits.

I haven't been to Destin, since I built Ch 58 in the early '90s. I
drove up I-75, across I-10 and I think it was Hwy 301 down to Hwy 98 to
the east of Sandestin.

Common folks practice necrophilia in your country? I'd hate to think what your deviates do. Care to give us a sampling of your day?

mike

--
Tracy Fort's necrophilia and a deceased seventy two year old cancer victim, who happened to be my mother:

==========
==========
Dug her ass right up! She was too damn ugly to have sex with before she died. The old bag o bones fell apart in my hands! She didn't complain about much either other than the lousy sex she got from those foursomes with you, Mike and her husband.

love dem bones....dem bones....dem bones

Please accept my apology for abusing her. I'm sorry that I did not toss her back into the black depths that she came from. Next time,I will be sure to take care of that. I promise that I will refill the hole with the dirt that came out too. In addition, I will re sod the plot at no additional charge. Let me also apologize for the milky substance in her left eye socket, that was an unavoidable accident. please feel free to include this post in your sig file!

Dem Bones! Dem Bones! Dem Bones! I loved playing dem Bones!
Dem Bones! Dem Bones! Dem Bones!
I loved playing dem Bones! I ran my fingers uo and down dem bones and she began to come alive!
I played dem bones like they never been played and she smiled for me all the day.

M/Sgt. Tracy Fort 116 AMX
250 Martin Luther King Blvd.
Robins ANG,
GA. 31098-2009

beerbarrel@cox.net

http://www.qrz.com/detail/KE4ODD
==========

==========

This .sig file will continue until Mister Fort posts a sincere apology to all cancer victims and their families. His refusal to do so says more about his attitude and upbringing than any of his thoughtless and hurtful postings in rec.radio.shortwave. He seems to be very proud of the fact that he can buy expensive radios using the refunded deposit money from his empty beer containers and has frequently posted the fact. It appears he is well on his way to purchasing his next radio.

In the past our deviates have talked about moving to CanaDuh. As per usual they only 'talk' about moving. They are already on their way to becoming good Canucks.

I don't know anything about Marx, except that he spelled Karl with a
K.

This country is here to secure the blessings of Liberty for all its
people, not just the well-connected.

War is a big-ass con game. They scare you and pick your pocket.

Come you masters of war
You that build all the guns
You that build the death planes
You that build the big bombs
You that hide behind walls
You that hide behind desks
I just want you to know
I can see through your masks

You that never done nothin'
But build to destroy
You play with my world
Like it's your little toy
You put a gun in my hand
And you hide from my eyes
And you turn and run farther
When the fast bullets fly

Like Judas of old
You lie and deceive
A world war can be won
You want me to believe
But I see through your eyes
And I see through your brain
Like I see through the water
That runs down my drain

You fasten the triggers
For the others to fire
Then you set back and watch
When the death count gets higher
You hide in your mansion
As young people's blood
Flows out of their bodies
And is buried in the mud

You've thrown the worst fear
That can ever be hurled
Fear to bring children
Into the world
For threatening my baby
Unborn and unnamed
You ain't worth the blood
That runs in your veins

How much do I know
To talk out of turn
You might say that I'm young
You might say I'm unlearned
But there's one thing I know
Though I'm younger than you
Even Jesus would never
Forgive what you do

Let me ask you one question
Is your money that good
Will it buy you forgiveness
Do you think that it could
I think you will find
When your death takes its toll
All the money you made
Will never buy back your soul

And I hope that you die
And your death'll come soon
I will follow your casket
In the pale afternoon
And I'll watch while you're lowered
Down to your deathbed
And I'll stand o'er your grave
'Til I'm sure that you're dead

-Stolen from Bob Dylan

Michael Lawson

Did you crack open your R2000 to bypass the
audio chain?? Sounds like the Rec out is pretty
much a line out.

So you replaced the caps in the audio chain within
the receiver to discover this, or did you use an external
detector at this time??

--Mike L.

I have the top and bottom off both of my R2000s.
I compared the audio from the straight from the detector
diode with that at the record/line out. There is a slight
difference. The rec out doens't have too much between it and
the detector.

The HA1368R audio power output Ic was used by many companies
in the late 70's and early 80s. I have a pioneer output module that
has two of these and Ihave played with themover the years in an
attempt to improve the sound. My goal then was a super simple ,
super small stereo for my wife. She was never satisfied. Didn't like
the "grit".
Once I got to thinking about distortion, I knew that IC sucked. I re-
verifiedit by feeding audio into connector 49(AF2). Feeding a 1K
low distgrion sine wave into it, I could plainly see the notch. When I
fed BW limited clasic CD audio inpto that smae point, the audio
sounds like er crud.

Elliot sound has a design simlar to one that I use that lets you see or
hear just what an amp or fitler is doing to your audio.
<http://sound.westhost.com/project57.htm>

If I were gong to go to the trouble of changing the audio caps, I would
be more inlined to build anactive detecot, 2nd link in my opening post,
cut the volume and tone cotolrs loose, and build a standalone internal
MOSFET amp. The speaker sounds great even on weak and noisy
signals when powered by a better amplifier.

I now wonder how much of the better reception in Drakes and NRDs
are "simply" because of the better detectors. I now think that a lot of
the noise/distortion on real weak signals was created by the simple
detector. I had written this off as being caused by the PLL phase
noise.

On very weak signals it is like I have a new receiver. On strong voice

signals I doubt if anyone could tell the difference. But on weak voice
or
even good strong music progrmas, it is a whole new ball game.

Is this worthwhile? I really don't know. My only cost has been for the
AD607s
and the 500HZ CW crystal fitler I bought from FC. The audio is so much
better
that myu wife without me telling her what I was up to, noticed the
improvement.
Given that outside temps are >95F with 60&RH, it is almost as bad as
being
iced in. I have learned a lot and hope to learn more. Adnwhile it may
be viewed
as crazie to add a DSP I am looking into pullin ghte DSP module from my

PCR1000 and adding it to the outboard detector.

A side benft has been the Piooner MOSFET stereo units. Since I
expressed
an interest to a frineds son, he scrounged up 4 more units, three brand
new
in the box. He moonlights as an installer for a local dealer. He
mentioned to
his manager that a guy he knew had a use for those "old dogs". So I
received
4 of them with a nice note from the manager hoping that I could use
them.
Seems that if it doens't have a built in CD you can't sell auto stereos
today.
I also recieved 2 sets of Cambrdge Sound Works "Home Theater" systems.
The amp, decoder and wall wart power supply are junk. The 5 little
satellite
speakers do a wonderfull job on voice. So I use the minimus for music
and
PC audio, and switch to the tiny speakers for voice. The only problem
is my
wife wants a similar setup in her sewing room to listen to her MP3
player,
CD, FM and PC. I am going to spend $25 on another set of Minius 7s for
her
and whip up a system for her tonight.

I even installed one in my Civic an now listen to my MP3 player instead
of brain
dead radio. While I would preferr to listen to SW whole I drive,
Listening to
"Vinyl Cafe''" is an acceptable option.

The nicest thing is I now have a "real" hifi system connected to my PC
so I can
transfer vinyl to CD (home recording act of 1984)and listen with
speakers instead

of headphones headphones.

And I still have a spare 4Ch 22W stereo amp to do something else fun with.

Terry

2266. Headsets?

Newsgroup: rec.radio.shortwave

Can someone suggest reasonably-priced comfortable headsets that are
excellent at isolating the user from _loud_ room noise? Something I can use
for shortwave and with enough frequency response to enjoy my XM radio.

TIA

On the BBC web site, if you get to a transmitter schedule page for a
region, they have a link to a bar chart graphic of the same info,
but it's labeled with transmitter site. On the Caribbean region
(for A-05), this transmission is tagged as coming from French Guyana.

Did you not say -Quote: they were fuck-ups, criminals, outcasts, religious nuts, and or amoral entenpreneurs? I also noticed you could give a rats ass about Sadams genocidal / homicidal tendencies. Come on Dave, get with the program!

P.S. It's not entenpreneur. It's entrepreneur or intrapreneur depending on your point.

They've all retired more times than the entire original social security benefactors!

Art Bell had yet ANOTHER "big" announcement last night. He's whittling his schedule down to two whole Saturdays a month. (I guess ten hours a week must have been killing him.)

Why doesn't Premier/Clear Channel just give him his walking papers??? He's just not that big o' deal anymore. George has done an excellent job of taking over the program. He's more polite than Bell. He seems to have a better rapport with the guests. His "Roundtables" are quite unique. Get rid of Bell once and for all. I swear it won't hurt your business one lil bit.

Bill - WA8MEA

I'm sorry to see Art Bell cutting back his hours.

If Art Bell had never been on Coast To Coast, then I'm sure I would like George Noory just fine. George Noory is like Jay Leno. Solid, but boring. Replacing a legend is tough.

Hi guys

Art Bell is very cool compared to Noory. Noory has the personality of a dull pencil.
He also comes off like a phoney to me.
I listen mainly to Art, but sometimes Noory has a good guest. That would be the main reason I would really listen it carefully at all.

Lucky

Bell wants to do less work because there have been numerous chupacabra sightings around their studios. Who can blame him?

Pardon my fucking French.

You said ''scum''. Are ''outcasts'' scum? Oh, you must mean the
''religious nutjobs''. Whatever. I happen to like the freaks.

Somebody famous ('tweren't me) once said:

They're selling postcards of the hanging
They're painting the passports brown
The beauty parlor is filled with sailors
The circus is in town
Here comes the blind commissioner
They've got him in a trance
One hand is tied to the tight-rope walker
The other is in his pants
And the riot squad they're restless
They need somewhere to go
As Lady and I look out tonight
From Desolation Row

Cinderella, she seems so easy
"It takes one to know one," she smiles
And puts her hands in her back pockets
Bette Davis style
And in comes Romeo, he's moaning
"You Belong to Me I Believe"
And someone says," You're in the wrong place, my friend
You better leave"
And the only sound that's left
After the ambulances go
Is Cinderella sweeping up
On Desolation Row

Now the moon is almost hidden
The stars are beginning to hide
The fortunetelling lady
Has even taken all her things inside
All except for Cain and Abel
And the hunchback of Notre Dame
Everybody is making love
Or else expecting rain
And the Good Samaritan, he's dressing
He's getting ready for the show
He's going to the carnival tonight
On Desolation Row

Now Ophelia, she's 'neath the window
For her I feel so afraid
On her twenty-second birthday
She already is an old maid

To her, death is quite romantic
She wears an iron vest
Her profession's her religion
Her sin is her lifelessness
And though her eyes are fixed upon
Noah's great rainbow

She spends her time peeking
Into Desolation Row

Einstein, disguised as Robin Hood
With his memories in a trunk
Passed this way an hour ago
With his friend, a jealous monk
He looked so immaculately frightful
As he bummed a cigarette
Then he went off sniffing drainpipes
And reciting the alphabet
Now you would not think to look at him
But he was famous long ago
For playing the electric violin
On Desolation Row

Dr. Filth, he keeps his world
Inside of a leather cup
But all his sexless patients
They're trying to blow it up
Now his nurse, some local loser
She's in charge of the cyanide hole
And she also keeps the cards that read
"Have Mercy on His Soul"
They all play on penny whistles
You can hear them blow
If you lean your head out far enough
From Desolation Row

Across the street they've nailed the curtains
They're getting ready for the feast
The Phantom of the Opera
A perfect image of a priest
They're spoonfeeding Casanova
To get him to feel more assured
Then they'll kill him with self-confidence
After poisoning him with words

And the Phantom's shouting to skinny girls
"Get Outa Here If You Don't Know
Casanova is just being punished for going
To Desolation Row"

Now at midnight all the agents
And the superhuman crew
Come out and round up everyone
That knows more than they do
Then they bring them to the factory
Where the heart-attack machine
Is strapped across their shoulders
And then the kerosene
Is brought down from the castles

By insurance men who go
Check to see that nobody is escaping
To Desolation Row

Praise be to Nero's Neptune
The Titanic sails at dawn
And everybody's shouting
"Which Side Are You On?"
And Ezra Pound and T. S. Eliot
Fighting in the captain's tower
While calypso singers laugh at them
And fishermen hold flowers
Between the windows of the sea
Where lovely mermaids flow
And nobody has to think too much
About Desolation Row

Yes, I received your letter yesterday
(About the time the door knob broke)
When you asked how I was doing
Was that some kind of joke?
All these people that you mention
Yes, I know them, they're quite lame
I had to rearrange their faces
And give them all another name
Right now I can't read too good
Don't send me no more letters no
Not unless you mail them
From Desolation Row
-Ray

If you don't want to go with good in-ears, something like a Sennheiser HD280 or HD25-SP looks like the best bet. HD212s also have very good isolation, but beware of their BASS. HD202s also are quite good. HD201s reportedly have only average isolation (similar to a Beyer DT231), but they do sound excellent for the price. (If you're still listening to cheap crummy old cans, now's a good time to upgrade.) Some of AKG's closed cans may also be worth checking out, e.g. the K171 or K271S. The guys at Headroom have measurements up for quite a few of the headphones they're selling:
http://graphs.headphone.com/
If you need really insane isolation, there are several IEMs that provide it, Etymotics come to mind here. I bet you could search for "good isolation" (or similar) at Head-Fi and be buried in threads, so I'll suggest you do that.

BTW, you may no longer find the XM sound quality all too amazing once you've got good cans. Compression tends to be pretty heavy there.

My brother's wife is a medical professional who drives lots of cross-country miles across New Mexico. A couple of weeks ago, she happened to catch Art Bell on her radio for the first time in her life, and she was totally blown away listening to Art and his callers discuss alien abduction and remote viewing with just as much seriousness as other broadcasters discuss sports and weather. Needless to say, she wasn't convinced by Art's passion for aliens. Instead, she says that the only aliens she will ever encounter will be those who come from Mexico.

At least that's what they want you to think.

Go figure. Of course you don't know "anything". The "Socialist/Communist" professors at the public Universities wouldn't dare expose you to the truth about their preachings. Karl Marx student Josef Stalin, would have described you as a "useful idiot".

> This country is here to secure the blessings of Liberty for all its

Ah yes, the high-jacking of a cause in the quise of Communism by way of Left-wing "progressive" front organizations.
Yawn!

> War is a big-ass con game. They scare you and pick your pocket.

Ah yes! The mantra of the Communist Party International. You need to read more Communist history little boy.

Kurtz Confirms Hillary Closing Down Shows

In what may be an unprecedented act of media censorship, several major TV and cable networks including NBC, ABC, CBS, MSNBC, Fox and CNN - have cancelled planned appearances of the author of the new, red hot book on Hillary Clinton. Though Edward Klein's sizzling new biography "The Truth About Hillary" http://www.newsmaxstore.com/nms/showdetl.cfm?DID=6&Product_ID=1919 is topping the bestseller lists, Hillary's top aides have launched a major effort to stop any discussion of the book over the TV airwaves. So far, their censorship effort has been a huge success in stopping Klein.

Though the celebrated author was scheduled to appear on more than a half dozen major TV network shows, all have cancelled except one, Fox's "Hannity & Colmes."

However, conservative host Sean Hannity did reveal that he was under immense pressure to cancel the program.

"I've had more political pressure than I've ever had in all my years in radio," Hannity said to Klein during a radio interview. "Do you know the number of requests I've had to cancel you and not have you on this program? I've never in the history of this program had more demands to cancel the guest."

Other hosts had similar experiences. Salem Radio Network's Mike Gallagher, syndicated nationwide, said he was deluged by emails opposing Klein's scheduled appearance and demanding he drop the author. Gallagher described the campaign as "very unnatural, like an orchestrated [effort]" and not from his listeners.

The liberal censorship of Klein's book has aroused the ire of Rush Limbaugh. America's number one talk show host was the first media person to condemn the spineless cravenness of the so-called mainstream media.

"It's very rare that you see the media circle the wagons to defend a politician," he noted. "You just don't see it, other than with the Clintons."

The media blackout on Klein's book can only be chalked up to a political motive. Not only is his book near the top of the bestseller lists, but it's a major discussion subject on talk radio and in the blogosphere.
...
"This is a book about Hillary's true character written by a journalist with solid mainstream credentials," he said. "This cannot be dismissed as a right wing attack on Hillary."

...
Klein's story underlines his central complaint that Hillary is dangerous and "Nixonian" with power. But that may be an understatement. Even Richard Nixon as President didn't have the power Hillary Clinton seems to wield today over the mainstream media.

http://www.newsmax.com/archives/articles/2005/6/26/195513.shtml

Hillary Spokesman: Don't Give Ed Klein Airtime

Buffalo News columnist Douglas Turner suggested last week, however, that Mrs. Clinton has much of the press under her thumb, saying she "totally controls" their agenda.

"Her media operation is tightly controlled and highly protective, and not always responsive," he wrote.

"Clinton has met with the New York press corps only a couple of times since 2000," Turner noted. "By contrast with [her predecessor, Sen. Pat Moynihan's] regimen, where the reporters had a share in the agenda, Clinton totally controls it."

Beijing devoted to weakening 'enemy' U.S., Chinese high level defector says.

China's communist leaders view the United States as their main enemy and are working in Asia and around the world to undermine U.S. alliances, said a former Chinese diplomat.

Chen Yonglin, until recently a senior political officer at the Chinese Consulate in Sydney, Australia, said in an interview that China also is engaged in large-scale intelligence-gathering activities in the United States that, in the past, netted large amounts of confidential U.S. government documents from agents.

"The United States is considered by the Chinese Communist Party as the largest enemy, the major strategic rival," Mr. Chen told The Washington Times in a telephone interview from Australia, where he is in hiding after breaking with Beijing in May.

All Chinese government officials are ordered to gather information about the United States, "no matter how trivial," he said. "The United States occupies a unique place in China's diplomacy," Mr. Chen said.
...
Most Chinese government activity in the United States involves information-gathering carried out by military-related intelligence officers or civilians linked to the Ministry of State Security, Mr. Chen said.

"I know that China once got a heavy load of confidential documents from the United States and sent it back to China through the Cosco ship," Mr. Chen said, referring to the state-owned China Ocean Shipping Co.

The information was "very useful" to China's military and related to "aircraft technology," he said.

The Chinese also send political police abroad to monitor overseas Chinese and others in North America who Beijing considers opponents of the regime, he said.
...
On China's military buildup, Mr. Chen said Beijing is following the strategy of former leader Deng Xiaoping, who urged China to "bide our time, build our capabilities" -- military as well as economic and political. "What that means is that when the day is mature, the Chinese government will strike back," he said.

Mr. Chen said the danger of a war over Taiwan is growing. "That is possible as Chinese society is getting more unstable," he said. "Once any serious civil disobedience occurs, the government may call for a war across the Taiwan Strait to gather [political] strength from people."
...

Two other Chinese government officials also defected recently in Australia
and have revealed Chinese government spying activities.
...

Special Report By Bill Gertz
Part 1: Chinese Dragon Awakens

China is building its military forces faster than U.S. intelligence and
military analysts expected, prompting fears that Beijing will attack Taiwan
in the next two years, according to Pentagon officials.
...
"In the '07-'08 time frame, a capability will be there that a year ago we
would have said was very, very unlikely. We now assess that as being very
likely to be there."
...
"We may be seeing in China the first true fascist society on the model of
Nazi Germany, where you have this incredible resource base in a commercial
economy with strong nationalism, which the military was able to reach into
and ramp up incredible production," a senior defense official said.
...
The official said China's buildup goes beyond what would be needed to fight
a war against Taiwan.
...
For China, Taiwan is not the only issue behind the buildup of military
forces. Beijing also is facing a major energy shortage that, according to
one Pentagon study, could lead it to use military force to seize territory
with oil and gas resources.
...
Chinese President Hu Jintao has called this strategic vulnerability to
disrupted energy supplies Beijing's "Malacca Dilemma."
...
The report stated that China will resort "to extreme, offensive and
mercantilist measures when other strategies fail, to mitigate its
vulnerabilities, such as seizing control of energy resources in neighboring
states."
...
"We are now in an arms race with a new superpower whose goal is to contain
and overtake the United States."
...
Full story http://www.washtimes.com/specialreport/20050626-122138-1088r.htm

---

Part 2: Thefts of U.S. technology boost China's weaponry

China is stepping up its overt and covert efforts to gather intelligence and
technology in the United States, and the activities have boosted Beijing's
plans to rapidly produce advanced-weapons systems.

"I think you see it where something that would normally take 10 years to
develop takes them two or three," said David Szady, chief of FBI

counterintelligence operations.

He said the Chinese are prolific collectors of secrets and military-related
information.
...
"What keeps us up late at night is the asymmetrical, unofficial presence."
...
At a time when U.S. counterintelligence agencies are facing an array of
foreign spies, the Chinese are considered the most effective at stealing
secrets and know-how.
...
"They are way ahead of what the Russians have ever done."

>

Sometimes the serious participants simply go into lurking mode.
I've been with the group for about a decade, now, but have fallen
into lurking mode, because much of what comes up is the same stuff
that came up when I first joined the group. Lots of beginners'
questions, and a good deal of rehash of common problems.

Most of the gratuitous flamers have exited after becoming bored.
Those that remain become more topical, less bellicose.

So, it's not that the serious players have left, they're just
waiting to participate in a discussion that they've not already been
involved in.

There's also the fact that much of what shortwave was several
years ago is now much different. With more major broadcasters
removing themselves by degrees, or in total from HF in favor of
Internet, podcasts, satellite radio, or any and all. And service by
the majors to North America being all but abandoned. Though there's
still a good deal of content, and some of it quite interesting, many
of the staples have given way to US religious broadcasters which are
of less interest to the serious DXers here, resulting in attrition
from the bands, and from the newsgroup as well.

World tensions and shifting political sands do create a need for SW in many regions of the world, but as David posted here recently, SW is not a primary, or even secondary medium for much of the world. This, too, results in changes, often sudden and dramatic, in usage of the bands, and subsequently the usage of this newsgroup.

Hard truth is that SW was at one time, a significant medium for Europe. And for Europeans living abroad, it was often the only source of news from home. For many governments, SW was the most cost effective medium for widely distributing propaganda, news, culture and popular entertainment. Local media, as it was instituted quickly displaced SW in the public attention. Outside of European culture, SW has been a novelty for the rest of us. If that.

This situation is not showing any signs of reversal.

Meaning, in the end, this newsgroup will be comprised of enthusiasts, and hobbycraft participants. As newsgroup history has demonstrated over the last 10 years, not every SW enthusiast remains an enthusiast. Atrition will reduce the numbers as people entering the hobby anew will be, because there is little or no active widespread promotion of SW listening, fewer than those exiting.

While flamers have no doubt run off some of the players here, and some of the serious players have gone into lurking mode, the changing nature of SW itself is responsible for the loss of regulars here.

This is starting to sound not so much like a vessel in distress as an illness or injury on board the Chiquita. Rescue 317 is trying to secure permission for the Chaquita to go direct to St. John's Newfoundland.

Besides being off the wall, he sounds like he's using a transmitter
he built on his kitchen table for $8.00 in parts. Signal is strong, but
vocal quality is abysmal. It's almost certainly WWRB from McCaysville,
but the worst quality I've ever heard for a strong signal - not even
sideband cleans it up.

Tony

> detector in your receiver is not required.

Actually, since NRSC II, yes they do. Part of this was to
accomodate AM stereo and make the audio competitive with FM on
receivers with sufficiently narrow IF bandwidth to accomodate
largely interference free reception. NRSC II also brickwalled audio
below 10K, so preemphasis helped overcome the top end losses from
shoddily designed IF strips.

On a vintage wideband receiver, NRSC II sounds unusually bright.
And on an NRSC II receiver the audio quality isn't really what
anyone would call high fidelity. Or even medium fidelity. It was a
feel good response to cutting the nuts off AM's potential for decent
audio in order to accomodate interference free listening as
nighttime powers were increased for local AM's.

Neither the AM stereo nor the better receiver audio developed as
expected. Tell me you're surprised. With the exception of some
dedicated receiver manufacturers focussing on AM audio quality, like
Fanfare, or builders who produced the limited number of AMAX
certifed receivers, most AM manufacturers took NRSC II as a license
to build cheaper receivers letting the preemphasis at the
transmitter compensate for poorer circuit designs.

I think some of the networks are more nervous about lawsuits than any
other "pressure", and that goes for Fox and Hannity, too.

Mr. Davies had quite a collection of "porkbutt" memoribilia on his web page not long ago. Perhaps he could respond to your request.

There was a rumor that WB2OTK would be returning to the airwaves, but so far it hasn't happened that we know of.

And we were promised the "rrrrroooollll cccaaaaallll", too, but that hasn't happened either.

While you're at it, see what you can get on "the red panty man". He had quite a song going on, too.

Don't worry Peter we will be in another war soon and SW will pick up.
Iran, North Korea, China... the possibilities for trouble are endless.

> better.

Cool! Thanks for all the great info. I've saved a copy of your post and
will be referring to it some evening soon and see what I can hear.

I recently bought a copy of the magazine "Monitoring Times". Although I
have a copy of the book "Passport to Worldband Radio", my favorite HRO
salesguy insisted that up-to-date info like what can be found in a
monthly magazine is much more useful.

I did read some of the reviews in Passport to Worldband Radio. They seem
to think very highly of the equipment I've chosen, at least on the
modest budget side of the scale. So that's very encouraging.

Since NRSC II, yes, there is.

Long time no see in the group, welcome back,
and I have leaerned that yes there is a standard
pre/de-emphasis for MW/AM/BCB stations.
Looking at an audio spectragram of the stations
that I can receive here in central Kentucky it
is clear I wasn't the only person unaware of this
standard. There is no sign that any of them
have anything other then lousy compressers.

Thanks to everyone who clarifed this issue for me.

I agree with most of these observations. The gist seems to be that shortwave is becoming more and more marginalized. This in itself is nothing new. Shortwave has been a marginal medium for decades now. It's marginalization is also, in my opinion, one of its strengths. What attracts many people to the shortwave bands is precisely the possibility of hearing something different, something besides the standard crap you hear on FM, broadcast AM, etc. Yes, the big broadcasters appear to be abandoning shortwave, but (1) there's *plenty* to listen to on shortwave besides the big broadcasters and (2) it's not yet clear how the big boys' retreat from shortwave is going to play out. Swiss Radio International and RVI both abandoned shortwave broadcasts some time ago in favor of the internet. You may have listened to these broadcasters regularly, but have you visited their websites since they left the airwaves?

Me neither.

Steve

Heck, we don't even have to be involved, either. Pakistan
and India are one accident away from making a lot of
offshoring look like a bad idea, and all it takes to ignite
things in much of the globe is the traditional assassin's
bullet.

Peter, you should post more often. It's always good
to see a voice from the past.

As I've said in the past, it all depends on what the
major broadcasters are trying to accomplish. If the
idea is to broadcast primarily to expatriates, then
you can use the more advanced forms of communication
as the expatriates will be willing to look them up. If
the idea is to broadcast views to the broadest possible
audience, then SW should remain as part of the solution,
as it reaches more people with less cost requirements
than other solutions.

>
> This situation is not showing any signs of reversal.

There are other factors, such as energy costs and
governmental priorities, that drive decisions on
SW broadcasting as well. If you look at SW
broadcasting as far as ratings are concerned, you're
probably going to be hard pressed to find any
good consistent Nielsen rating-esque method
of finding out listenership. It's easier to say, "XXX
website has XXX hits", and be able to draw
conclusions, or also perform the same service

as the Nielsen Netratings, so there is data for
policymaking. SW listenership is a bit more
nebulous, so it's a bit harder to ascertain. That
makes it also more difficult to defend when the
people who make the decisions are used to a
corporate-style cost benefit analysis.

> Meaning, in the end, this newsgroup will be comprised of
> enthusiasts, and hobbycraft participants. As newsgroup history has
> demonstrated over the last 10 years, not every SW enthusiast
> remains an enthusiast. Atrition will reduce the numbers as people
> entering the hobby anew will be, because there is little or no
> active widespread promotion of SW listening, fewer than those
exiting.
>
> While flamers have no doubt run off some of the players here,
> and some of the serious players have gone into lurking mode, the
> changing nature of SW itself is responsible for the loss of regulars
> here.

One other item to note is that the real world will often
intrude. There was a period of several years where
I didn't touch SW at all, because of the time factor.
I'm also sure that later on in life, as the kids become
more active with evening events like sports, scouts
and whatnot, my free time for SW will decline again.
Still later, when they are all teens, I'm sure that the
free time will start to go back up, and my availability
for SW listening with it.

This is the same item that you see in the boardgame
community: when the old Atari and Intellivision came
out, there was a dropoff in boardgame usage. That
dropoff has become heightened over the years as
the video games replaced board games as the primary
game of choice of kids. However, there is still a
subset of people who still play boardgames, and there
is a cottage industry of companies that have since
sprung up to cater to that group that looks for things
other than the latest Monopoly variant.

I had my first taste of XM radio reception via satellite this past weekend and was less than impressed because it drops the signal around tall buildings and tall trees. For the Grundig to not have xm capability is no great loss based on my experience.

On a portable, you'd probably have less frequent dropouts than in a car
because odds are you'll put it down in one spot while you listen.

Of course if you pick a spot that can't see the satellite, you'll have
to move or listen to something else.

In fact we were in a car. The lost signals were so frequent that we
switched to regular radio, and found the music we were looking for.
They will have to stabilize reception and improve the selections before
paid satellite radio is of any interest to me.

I see you aren't up on all the facts. its not a revocation, its a petition to deny a renewal. a revocation requires an entire process to be initiated (which so far, has been started with the investigation and the notice of apparent liability). However, I digress, this isn't a revocation.

as for my enemies, well, they have been mitigated or otherwise marginalized into obscurity (can you say the same?).

>
> Would you feel that they were justified in petitioning the FCC not to
> renew your license? Is there anyone else whose license "we" should
> petition the FCC not to renew? Pretty soon we can all be gathering
> signatures in an attempt to silence our perceived on-the-air enemies.

well, you would have to justify it and show evidence before the fcc why it should be allowed. in fact, I welcome the challenge from you to attempt to do so. However, I would suggest you make sure all your I's are dotted and your T's crossed.

Just to make this point clear, Mr. baxter has violated a fair number of rules and regs over the years, and even continues to do so given the current circumstances. can you show anywhere in ham radio (on the air) where I have done so? didn't think so.

>
> This petition thing is a piss poor idea, invented by those who would
> unwittingly harm amateur radio itself.

and you base this opinion on what facts?

fact:
1. mr baxter has repeatedly and with intent violated part 97 on numerous occasions
2. he has violated other rules and regulations related to the above
3. he has issued frivolous threats through the mail (some of which is amateur radio related)
4. his statements in the public record indicate that he has no interest in helping the service, just trashing it.

lastly, he has used his station in a manner that suggested a pecuniary interest.

in this day of paranoia and distrust, people like him can always be pointed to as the worst possible example (and thus, give those in power a reason to take away what we worked so hard to achieve. which is the worse threat?

well you seem to think that the petition is a bad idea, perhaps you need to further review the facts before you go spouting off.

Well, yes I can be "not cooperative" and even downright cranky when an over-hyped improvement doesn't work as advertised. Satellite radio seems to suffer from the same shortcomings that satellite phones suffered. Once users actually have to work with the new radio (or phone) then the shortcomings become clear. For those of us with access to a reasonable number of FM & AM radio stations satellite radio is largely a redundant and expensive toy. I suppose it could be useful out on a flat and relatively treeless open road, but so would a folder of good cd's.

Yes, but the clear line of sight becomes an issue
in the big cities and in areas with lots of trees. I
personally have DirecTV, and I'm lucky in that the
tree near to the dish is a honeylocust, so that the
signal from the birds can penetrate the dappled
shade of the honeylocust. Others I know who
wanted to make use of DirecTV had to forego it
because obtaining a clear view of the southern
sky meant they'd have to cut their trees down.
Satellite radio, it seems, looks like it might suffer
from similar (but different) limitations.

Here's a link for those interested in some of the technical details of satellite radio

http://makeashorterlink.com/?Q1715285B

This info is almost three years old, but it will give you some basic information about how the system
works, including an early link budget for XM's system. You will notice that in some areas (places like large cities, tunnels, etc) repeaters are used
to ensure coverage. In addition, most satellite systems of this type have *some* link margin to allow
for reasonable in-building penetration loss, which is a function of location, construction materials, frequency
of operation, etc.

2345. VT Group BBC World Service transmission contract to continue

Newsgroup: rec.radio.shortwave
Date: 2005-06-28 18:07:54 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <3idhvnFkpd6kU1@individual.net>
Source record: 25883

VT Group BBC World Service transmission contract to continue
VT Group, through its VT Communications subsidiary, has reached agreement to continue distributing and transmitting BBC World Service radio programming for a further five years. This is valued at approximately ?150 million. The initial contract was originally let to Merlin Communications upon privatisation in 1997. VT Group acquired Merlin in 2001, creating the VT Communications Division.

BBC World Service radio programmes are transmitted through 10 transmission sites in the UK and throughout the world, which are operated and maintained by VT Communications. The service is transmitted in 43 languages to around 150 million weekly listeners throughout the world with the English and Arabic services broadcast 24 hours a day.

VT Group Chief Executive Paul Lester commented: "The continuance of the contract will underpin our communications business for several years to come and reflects the high standards of service provided since privatisation. In addition, we are excited to be supporting the World Service as it faces a period of unprecedented technological change, through its increasing move into the digital era."

Nigel Chapman, Director at BBC World Service, said: "Our relationship has continued to develop very positively since the acquisition of Merlin by VT. We face an exciting but challenging future and we are delighted to be working with VT Communications as our partner."

(Media Network weblog)

[Moderator: The press release doesn't make it clear, but while VT Communications owns and operates the UK shortwave sites, the overseas sites such as Cyprus, Thailand, Ascension etc are still owned by the BBC or UK government and only operated by VT under contract. dk]

It's not as bad as you might think, but if you're in an area with dense trees, lots of tall buildings, or if you're going under a bridge or through a tunnel, the radio will go silent.

A few months back we had a discussion about the fact they could greatly improve the system by adding a 30 second buffer, and transmitting everything twice to avoid most drop outs.

The fact that a preponderance of people on this newsgroup have
different political views than you, take the polls to mean something
different or if they even care about them does not necessitate your
constant regurgitating of that information on this group. At some
point you might realize that your postings are as effective as pissing
into the wind. While a bit of a centrist who is fairly open minded I
must say that I find your constant political postings an annoyance.
In fact, I find it much more enjoyable to read the flames between
DXAce and MII than to view your OT posts. Think about it David, you
just might realize how politically ineffective you are in this forum.

Scour usenet to find a more suitable group, or better yet find folks in your geographic area who either share your ideology or are more open to considering it, then take your pleas to your Federal Rep's via petitions and letter writing campaigns. Seems like a much more effective means of swaying US policy than posting on r.r.s. Also, Mike 'appointed' himself your lawyer in the same fashion that you have appointed yourself as the singular oracle of political knowledge.

Goddam. You talk purty.

Do you also wax eloquent when people post about Michael Jackson or
missing white girls? Or is it just when someone reminds you that you
have been conned by criminals from Texas?

Did they hire Billy Bob the McCaysville town mechanic as their
"engineer"? Considering how WWRB always seems to be short of cash, it
wouldn't surprise me to hear that they've cut corners on such extras as
decent engineering.

Actually untrue. In major cities, XM has repeaters in the city proper
because all sat based services have problems with urban canyons.

"Dr." David, a simple factoid for your brains feeble digestive ability.
EVERY anti-war rally in the U.S., at least since the Vietnam War, has been organized directly, or indirectly through many "front" organizations, by the Communist Party.

The Communist Party has a long history of high-jacking any so called humanitarian causes that support their agenda. They use layers upon layers of "fronts" to hide the fact that they are The Communist Party.
These multiple layers of "fronts" are unmistakably similar to the political social structures used by the Chinese Communist Party.

More - continued below.

"David" <rickets@knac.com> wrote in message
news:176ub1hde6j89ub9icpprcto8lnsnvihin@4ax.com...

> RALLY
>

This is a fabulous article to study the technique of western left-wing media Communist propaganda.
I mean that with complete and absolute seriousness.

Please notice the article NEVER mentions the reason WHY they were being spied upon. The article simply goes on and on continueously spouting anti-government rhetoric. Finally, at the bitter end it casually mentions the groups that wewre alegedly spied upon as if they were poor inocent victoms of some imagined government conspiracy. The focus is clearly on aleged "spying". Sounds oh, so scary! Doesn't say they were being observed. There is a big difference. Scare scare scare.

If you analyse this sequence and have any familiarity with propaganda from Communist countries like N.Korea it will knock you right over the head it is so obvious.

Let us now examine who these groups are that were alegedly victems of government spying and perhaps get an idea of why they were being "observed".

Using the greatest Communist/Socialist/Left-wing/Progressive network discovery tool on the net.
www.DICOVERTHENETWORK.com

Who is "Gold Star Families for Peace" - GSFP?

On March 19, 2005, GSFP helped organize a major anti-war protest in Fort Bragg, North Carolina to mark the second anniversary of the start of the War in Iraq; the rally drew more than 3,000 protesters.

Prominent member of GSFP is Lila Lipscomb of Flint, Michigan, who was featured in Michael Moore's film Fahrenheit 911.
http://www.discoverthenetwork.com/groupProfile.asp?grpid=7075

Even though GSFP has a relatively small membership (just 60 families as of March 2005), the group works closely with other anti-war organizations such as:

Code Pink - Code Pink was founded by four experienced activists and hardcore Communists - Jodie Evans, Medea Benjamin, Diane Wilson, and a radical Wiccan activist calling herself Starhawk. Ms. Evans is the nominal leader of the organization, which works closely with Medea Benjamin's group Global Exchange, which in turn maintains strong ties to the Communist Workers World Party (WWP). Code Pink also works hand-in-hand with United For Peace and Justice, whose leader Leslie Cagan is a longtime devotee of Fidel Castro and the Socialist Party USA. Throughout the 1990s, many of the Marxists currently working for Code Pink organized anti-free trade protests - some of them violent - and filed numerous high-profile lawsuits that forced American corporations to spend millions of dollars defending themselves.
http://www.discoverthenetwork.com/groupProfile.asp?grpid=6149

Military Families Speak Out - MFSO has received positive press in such publications as Socialist Worker and the International Socialist Review.
http://www.discoverthenetwork.com/groupProfile.asp?grpid=7071

Veterans for Peace - in 1989 VFP "received [an] invitation," apparently from the Marxist Sandinista government, "to serve as Official Observers during the February 1990 Nicaraguan elections." The Sandinistas had reason to expect that the 50 election monitors from sympathetic VFP would lend legitimacy to their electoral victory by declaring the vote clean and honest.

But the Sandinistas lost the election. And, as its own written history makes clear, at the instant that this pro-Castro regime ceased to rule Nicaragua the VFP ended all assistance to the country.

VFP suddenly stopped sending water purification experts and truckloads of food, medicine and toys for the Nicaraguan poor - who were , after all, still in need. A cynic might conclude that VFP aid had been provided only to help the Marxist Sandinistas entrench and retain their power.

But in 1990 VFP did have the money to send representatives to the 45th Anniversary of World War II Victory Day in the Soviet Union. VFP joined Soviet Union veterans in signing a joint statement "calling for an end to war."

In 2000 VFP aided Saddam Hussein as it did the Sandinistas, providing assistance by way of water-treatment facilities to remedy a problem its web site says was caused by American-led "sanctions" against the Iraqi government.

In 2001 VFP co-sponsored, along with the International Action Center that has ties to the Communist front group International ANSWER, the "Korean War Tribunal" held in New York. This "tribunal" was a political show trial designed to produce anti-American propaganda for the world's Leftist media.

VFP gatherings having featured such Leftist speakers as the late Senator Paul Wellstone (D.-Minnesota), and Congressional Progressive Caucus members Dennis Kucinich (D- Ohio) and James McDermott (D - Washington). This caucus, of course, is an almost-openly-socialist entity. The VFP web site names no moderate or conservative military veteran officeholder who has ever been a featured speaker at one of its meetings.

At a 2003 International ANSWER-sponsored anti-war rally in San Francisco, local VFP leader Jim Long spoke. As reported by Greg Yardley of FrontPageMagazine.com, Long described being at a rally in Cuba and observing "how Castro was loved by his people, in contrast to President Bush, who had to be protected from protestors in a 'quasi-military' operation." [In Cuba, of course, anyone who dared protest against Fidel could face prison, torture, or a firing squad.]

Jim Long, wrote Yardley, then claimed that "it's hard for me to determine where the police state is and where the free state is." Long told the cheering anti-war crowd that "every November 11th he goes to Cuba to take part in a special commemorative ceremony to honor Cuba veterans."

The President of Veterans for Peace is David Cline. He is a decorated, disabled veteran of the Vietnam War. In 1970 he joined Vietnam Veterans Against the War (VVAW), one of whose leaders was John Kerry. In 2004 Cline was also the still-existing VVAW organization's National Coordinator. VFP and VVAW, therefore, have intertwined leadership as well as ideology.

VFP is a member organization of the
Win Without War
http://www.discoverthenetwork.com/groupProfile.asp?grpid=6935
United for Peace and Justice
http://www.discoverthenetwork.com/groupProfile.asp?grpid=6166
and Abolition 2000 anti-war coalitions
http://www.discoverthenetwork.com/groupProfile.asp?grpid=6765

```
==========================
Canadian broadcasting news from : http://www.w4uvh.net/dxlatest.txt
==========================

STATION NEWS:
------------
570 (CKEK) BC Cranbrook. The 5 former "E-K radio" stations (the
others being CFIW-1200 Canal Flats, CFEK-1240 Fernie, CJEK-1400
Sparwood, and CKKI-1460 Kimberley) have all gone off the air on AM and
have been replaced by 2 FM stations. (TRH-BC)

580 CKXR BC Salmon Arm. Has not abandoned AM for 99.7 FM
yet. Still //CKIR-870, CKCR-1340, CKGR-1400 with "EZ rock" slogan.
(TRH-BC)

860 (CBRA) BC Revelstoke. CBC LPRT has moved to 91.3 FM. (TRH-BC)

880 (CKKC) BC Nelson. Web site implies the station is still on AM,
but I did not log them from nearby towns, so they have either moved to
FM (106.9?) or they are getting out very poorly. Sister station
CFKC-1340 in Creston is still on AM but getting out poorly. The
mountains in this part of BC seem to make for very poor coverage.
(TRH-BC)

940 (CJIB) BC Vernon. Has moved to FM. (TRH-BC)

970 CFXE AB Edson - (ex-CJYR). The former Yellowhead Radio
stations are now "the fox". 2 of the stations (Hinton and Jasper) have
moved to FM (CFXP-95.5 Jasper, CFXH-97.5 Hinton), one (Edson) has a CP
to FM, and the other (CFXG-1230 Grande Cache) is apparently remaining
on 1230 AM for now. I assume this is where things will remain for a
while, since they have had their vans re-stenciled with this
information. Slogan is "the fox, playing all kinds of stuff." (TRH-AB)

1050 (CICF) BC Vernon. Has moved to FM. (TRH-BC)

1150 (CBTK) BC Midway. There is no CBC LPRT in the town of Midway
in southern BC near the Okanagan Valley. Maybe there is another town
called Midway in some other part of BC? (TRH-BC)

1200 (CFIW) BC Canal Flats. Old "E-K radio" relay is off; I think I
read something about a new licensee wanting to restart the 1200
operation, but it was definitely not on when I drove through Canal
Flats this time. (TRH-BC)
```

1230 (CBPB) AB Athabasca Falls / Columbia Icefields / Maligne Canyon - I had seen some reports from as recent as 2002-2003 indicating these stations were back on the air after years of non-operation, but unfortunately this is not the case. Unlike Banff, I did not notice any new FM stations to replace them. (TRH-AB)

1230 (CBPG) AB Banff East Gate / Banff Townsite / Castle Junction / Saskatchewan Crossing - These have been permanently replaced by a single set of stations in Banff (101.1 English, 103.3 French). (TRH-AB)

1230 CFXG AB Grande Cache - (ex-CIYR1) This one is still on 1230 AM but gets out very poorly. I could only get an occasional bit of music //95.5 FM from Jasper, and even then not enough to be 100% sure. (TRH-AB)

1230 (CIYR) AB Hinton - Has moved to 97.5 FM and is now "the fox". (TRH-AB)

1230 CBPD1 BC Rogers Pass (Glacier Park) - This station, which was seemingly abandoned at least 4 years ago, is actually still running OC from the visitor center at Rogers Pass. (I was staying in the lodge about 100 feet away so it was unmistakable; the carrier could be logged for about 2 miles SW on Highway 1 but hardly at all to the east due to steep mountain blockage). Nothing on 1490 to go with this one. (TRH-BC2)

1230 (CB??) BC Yoho National Park - These stations are long gone. (TRH-BC)

1240 (CFEK) BC Fernie. Replaced by FM station. (TRH-BC)

1340 (CKGF) BC Grand Forks. Has moved to FM. (TRH-BC)

1350 (CBKI) BC Valemount. Moved to 90.3 FM. (TRH-BC)

1400 (CJEK) BC Sparwood. The 5 former "E-K radio" stations have all gone off the air on AM and have been replaced by 2 FM stations. (Note there was also a listing in some sources for an E-K radio station in Sparwood on 1440. This appears to just be a typo for CJEK-1400. Sparwood is a rather depressed mining town which seems to be losing the battle for tourism dollars to Fernie to the west and the Crowsnest Pass region to the east, so a new AM station there seems unlikely). (TRH-BC)

1450 CBXC AB Coleman. This one is listed on some web sites as "Northern Alberta", and the call signs make it sound like a CBX relay, but it is in fact a CBR relay in the Crowsnest Pass area of SW Alberta. This one seems to get out only to the east and west, which is not surprising given the surrounding terrain. (TRH-BC/AB)

1450 (CKYR) AB Jasper. This one has moved to 95.5 FM where it is now CFXP "the fox." Jasper is a nice place to DX, having only one local (on 860), which is in the process of moving to FM. (TRH-AB)

1450 CHOR BC Summerland. Still active but is now "oldies 14-50" and occasionally the same feed as used by CKFR "oldies 11-50." Owned by "Standard Radio Group." No longer //the other Okanagan Radio stations on 800, 1240, 1400. Seemed a waste to have all these stations in the same market running the same programming. (TRH-BC)

1460 (CKKI) BC Kimberley. The 5 former "E-K radio" stations have all gone off the air on AM and have been replaced by 2 FM stations. (TRH-BC)

1490 (CBPB) AB Athabasca Falls / Columbia Icefields / Maligne Canyon. I had seen some published reports from 2002-2003 indicating these stations were back on the air, but unfortunately this is not the case. Unlike Banff, I did not notice any new FM station to replace them. (TRH-AB)

1490 (CBPG) AB Banff East Gate / Banff Townsite / Castle Junction / Saskatchewan Crossing. These have been permanently replaced many years ago by a single set of stations in Banff (101.1 English, 103.3 French). (TRH-AB)

1490 (CJPR) AB Blairmore. Has moved to 94.9 FM. Sister station CJEV Elkford, BC remains on AM. (TRH-AB)

1490 (CBPN) BC Golden. The station appears to have been permanently replaced by a programmable sign that gives up-to-date highway information. (TRH-BC)

1490 (CBPR) BC Revelstoke. The station appears to have been permanently replaced by a programmable sign that gives up-to-date highway information. (TRH-BC)

1490 (CBPC1) BC Rogers Pass (Glacier Park). Nothing here despite the OC on 1230. (TRH-BC)

1490 (CB??) BC Yoho National Park. These stations are long gone. (TRH-BC)

1610 -- BC Kelowna. 6/6 1250. Talking house noted along highway 97 east of Pandosy Rd. (TRH-BC)

The following CBC LPRTs were noted on AM:
740 CBKR BC Parson.
740 CBUN BC Salmo.
860 CBXB AB Banff (reportedly seeking a move to FM).
860 CBXJ AB Jasper (has already started simulcasting on 98.1 FM, so expect this one to go away soon).
860 CBRD BC Field.
860 CBRJ BC Grand Forks.
900 CBWD BC Donald.
900 CBRK BC Kimberley.
1450 CBWI AB Grande Cache.
1540 CBXD AB Edson (? - Barely audible from Hinton this time; was audible from Jasper on my previous visit in 1999).

The following 2 Environment Canada stations are active and getting out well (both provide English and French language weather):
1260 CBPM BC Sicamous.
1580 CBPK BC Revelstoke (signal gets as far as Jasper, AB at night).

REGULAR LOGGINGS:

570 CKSW SK Swift Current. 6/10 1725. Audible midday from Sulphur Mountain. "Your home for country music, CKSW." (TRH-AB1)

610 CKYL AB Peace River. 6/13 0025. "Alberta's country giant, YL country." (TRH-AB2)

610 CHNL BC Kamloops. 6/5 0511. "Celebrating 35 years of playing your favourite oldies, radio N-L, the greatest hits of all time." (TRH-BC1)

620 CKRM SK Regina. 6/10 1648. Poor signals midday on top of Sulphur Mountain in Banff. Local ads and ID. (TRH-AB1)

650 CKOM SK Saskatoon. 6/10 1722. Ad for Fuddruckers, promo for Larry Boortz show, and ID. Audible midday on top of the mountain. (TRH-AB1)

1050 CJNB SK North Battleford. 6/10 0210. Country music, "the best country back-to-back on CJNB and CJNS." (TRH-AB1)

1210 CFYM SK Kindersley. 6/10 0215. "Classic hits 13-30 and 12-10, a Golden West radio station." (TRH-AB1)

1340 CFKC BC Creston. 6/18 1813. "KBS, Kootenay's all-hit music station." Still active but gets out poorly with their 250w. Only seems to get out to the south (TRH-ID).

1340 CJEV BC Elkford - Station is active //CJPR-94.9 (ex-1490). Slogan is "Cat country / mountain radio." Ironically, one of the promo announcements said "when you hear good country music, you know you're in Alberta." I guess they forgot they have a sister station in BC. There does not seem to be a studio for CJEV in Elkford though the transmitter is definitely in that area. The local Chamber of Commerce had not heard of CJEV and they were not in the local phone book. Gets out reasonably well to Sparwood, and some times to points further east and west such as Fernie, BC and Bellevue, AB. (TRH-BC)

1340 CIVH BC Vanderhoof. 6/11 0929. A nice surprise on the car radio at sunrise as we drove into Lake Louise. Still "97 FM the wolf" //CJCI. (TRH-AB)

1450 CBWI AB Grande Cache. 6/14 0140. Fair with classical music feed //local 860 station. (TRH-AB2)

I was originally planning to ship the big Kiwa loop like I did on my Alaska trip in 2003, but at the last minute I bought a suitcase big enough to safely take it with me (I almost paid for the suitcase with the savings in shipping charges). With the laptop, radio, 2 antennas,

digital voice recorder, 2 cell phones, camera, batteries, and extension cords, my carry-on and checked luggage contained a ton of metal. This was enough to earn me a "pre-flight massage" on the way up and a TSA baggage inspection on the way back.

Conditions in Trail, Kelowna, and Rogers Pass, BC were pretty poor due to the very high mountains and very steep narrow valleys (like Alaska, there is no trace of sunset enhancement; the stations just drop in all at once shortly after dark). Conditions were much better in Jasper, Banff (Johnston Canyon), AB, and Radium Hot Springs, BC. Jasper is getting to be an especially nice place to DX now that the local on 1450 (and the 1230 station in Hinton) are gone. Not much to hear during the day in BC and AB unless you get on top of a mountain. Daytime is best spent photographing critters, which were out in abundance this year: black bears, elk, mountain goat, bighorn sheep, and mule deer (all with babies) plus "moose and squirrel" for the Jay Ward fans. :) 73, (Tim Hall, ABDX via DXLD) See also U S A

** CANADA. Canadian Coalition Wants Pay-Radio Ruling Overturned --- Glenn, Apparently not everyone in Canada is happy about satellite radio coming to their country. I found this article on Yahoo Canada:

QUASH CRTC PAY-RADIO RULING, UNIONS AND ARTS GROUP URGE FEDERAL CABINET --- MARIA BABBAGE Mon Jun 27, 3:29 PM ET

TORONTO (CP) - The federal government must overturn a regulatory ruling allowing satellite broadcast operators to bring pay-radio services into the country if it wants to preserve years of effort to protect and promote Canadian programming, a coalition of media and labour groups said Monday.

The coalition is asking the Liberal cabinet to overturn the June 16 ruling by the Canadian Radio-television and Telecommunications Commission, which it says will eat away at Canadian content on the country's airwaves.

"It's a slippery slope," said Ian Morrison of Friends of Canadian Broadcasting, a non-profit media watchdog group.

"It's taken decades to build up the Canadian content regime in this country. . . . By the stroke of a pen the CRTC is now saying that pay radio can be delivered at a content level of only eight per cent Canadian."

The ruling cleared the way for two groups, Canadian Satellite Radio and Sirius Canada, to provide pay-radio service - long in existence in the United States - to the Canadian market via satellite.

Canadian Satellite Radio is a partnership between Toronto businessman John Bitove and Washington-based XM Satellite Radio Holdings Inc.

Sirius Canada is a joint venture of the CBC, Standard Radio and U.S.-based Sirius Satellite Radio Inc. . . . [more]

(via Steven Cline, Indianapolis, IN, DXLD)

** CANADA. ARTISTS FIGHT SAT RADIO IN CANADA

Arts groups are fighting satellite radio's move into Canada, asking the Canadian Governor in Council to set aside or refer back to the Canadian Radio-Television and Telecommunications Commission its decision to allow the subscription-based services into the country.

The coalition of arts groups made the request in a letter sent to the federal cabinet Monday. Groups signing the letter include the Canadian Independent Record Production Association, Directors Guild of Canada, Friends of Canadian Broadcasting, National Campus and Community Radio Association, Songwriters Association of Canada and the Writers Guild of Canada.

In a statement it released on satellite radio's north of the border moves, the Songwriters Association of Canada pointed out that current broadcast regulations require a minimum of 35 percent Canadian content on most stations while satellite radio companies will be required to program only one Canadian channel for every nine American channels. The association said that amounts to less than 10 percent.

"The Songwriters Association of Canada believes that this massive reduction from current standards could have a profoundly negative impact on musical arts and culture in Canada," the organization said.

Friends of Canadian Broadcasting said the CRTC decision to allow satellite radio into the country runs counter to the country's Broadcasting Act and Canadian Parliament's goal of ensuring Canadian programs are predominant on Canadian airwaves.

"This decision does not reflect the legal requirement that Canadian broadcasters must offer homegrown programs. (The decision) creates a pipeline for U.S. radio programs direct to Canada, with little in return for our country" said Friends spokesperson Ian Morrison (From today's SkyReport.com via Joe Buch, June 28, Swprograms mailing list via DXLD)

Last I checked, terrestrial cross-border broadcasting does the same thing in effect. I suppose they can argue that licensing it is different than just acknowledging the laws of physics. But maybe they should check the estimates on gray market subscriptions. Something is better than nothing --- and nothing is what they receive with the gray market approach (John Figliozzi, NY, ibid.)

Depending on the market, you may have local terrestrial
repeaters to fill in weak spots where satellite isn't visible to the
receiver. We have them in Chicago, so I rarely see dropouts even
with underpasses, and similar obstacles. Over the weekend I was on
the road where terrestrial repeaters were not available. Dropouts
were moe common than in the city.

It is true if you're in an area that isn't served by a repeater.

In my neck of the woods, trees are more likely to be a problem than
buildings.

My wife loves the XM radio in her car. If it was in my car I'd be
trying to figure out how to improve the signal to avoid the dropouts.

Saying that the hornet's nest of radical leftist organizations is run by a monolithic Communist Party is like saying that the various Italian American organized crime operations in NYC, Chicago and Las Vegas are part of the same giant Mafia, run by a group of guys sitting around a table planning to knock off Fort Knox like in a 1960s James Bond movie. It just ain't so. I used to be a foot soldier in the radical left "movement", and I know from experience that these various groups compete fiercely, despite all their lofty rhetoric about collective action, and that they often work at cross purposes and spend most of their time attacking each other for percieved deviance from the Marxist gospel instead of attacking the capitalists. A better analogy would be the Red Guards of China's Cultural Revolution-a many headed monster with the various heads ferociously attacking each other, a monster that is impossible for any single Communist Party to control. Any resemblance to the organizational structures of Communist Parties in the USSR or China is coincidental, the result of the many headed monster drinking from the same poison well of Marxist theory. It is this infighting that makes the Communist monster in America a puny opponent to the capitalists, despite all its fire breathing. The American Communist "movement" is actually a paper dragon. The actual CCP is more of a threat to America than homegrown communism.

Useful idiot
From Wikipedia, the free encyclopedia.
In political jargon, the term "useful idiot" was used during the Cold War by certain anticommunists to describe communists in western countries (particularly in the United States). The implication of the insult was that the communist in question was naï¿½ve, and that he or she was being cynically used by the Soviet Union, thus unwittingly betraying his or her home country.

It is also believed to have been coined by Vladimir Lenin to describe western non-Communist reporters and travellers who would endorse the Soviet Union and its policies in the West. Lenin never wrote it in any published document, but it was a commonly used phrase within Communist circles long before anti-Communists used it. Whether or not Lenin actually coined the phrase cannot be proven, but it certainly stems from Communists.

In the United States, the term has today been appropriated as a pejorative used by political conservatives against political liberals. The tone of usage implies that the target of this sobriquet is ignorant of the facts to the extent that they end up unwittingly advancing an adverse cause that they might not otherwise support.

The term gained increased use after the publication of conservative columnist Mona Charen's 2004 book Useful Idiots: How Liberals Got It Wrong in the Cold War and Still Blame America First.

2380. Re: Eton E1 MINUS XM

Newsgroup: rec.radio.shortwave
Date: 2005-06-29 01:47:32 UTC
From: "John S." <hjsjms@cs.com>
Message-ID: <1120009652.766520.155910@g44g2000cwa.googlegroups.com>
Source record: 25918

Interestingly I was in Asheville, NC this weekend and experienced dropouts in a city not known for high rises. And of course when out in the hilly countryside reception on the XM receiver was disappearing like a kid playing hand 'n seek. And all the while good old FM was steady and I enjoyed bluegrass on an NPR station about 40 miles outside of Asheville on the Blue Ridge Pkwy.

So far I'm not impressed with and an not sold on the value of subscription satellite radio when standard FM and AM offer a wide range of programming with stable reception.

ok then, explain the "felony afidavits" that k1man sent out. you want to
talk about maliciousness and vigilantism, there you go.

The problem is, you attempted to divert the point from the thread.

Leonard Clark, 860th MP CO
AZ Army National Guard
6-28-5

I have been talking to my fellow soldiers about this whole situation
and I have told them about how the leadership in Washington is trying
to get the American people to silence their criticisms of the continued
lunacy we call the occupation of Iraq.

I tell them that they are saying to the Congress: "Well, ya know, our
poor soldiers wanna stay and finish the fight in Iraq, but you people
in Washington D.C. are undercutting their morale by bringing up this
'time table stuff'" and "What the hell are we doing in Iraq? Do we have
a plan?" stuff.

When I tell this to my fellow soldiers, they immediately begin to laugh
and then they get pissed off that such bullshit is being spouted back
home, because we are the ones who are calling home and telling our
families what a bunch of lies and crap they are telling the American
people.

Usenet archive: rec.radio.shortwave (2005-06 - 2005-07) Page 2965

Well, I'm not gonna wait for another damn wall for Iraq to be filled with the names of my fellow soldiers, and I hope you're not either. The cause we fight for is noble and just, it is to save the lives of American soldiers who are tragically dying over here needlessly. If we can save just one more American soldier's life who knows - we might just end up saving humanity itself.

There are those who say that one life is not worth much, but I say every human life is the gift of GOD, and to destroy one of those lives for the greed and corruption of hypocrites who do not have to fight wars - nor whose children do not have to fight wars - is a great sin. To lie and say we are dying over here to ensure 'democracy' in the Middle East when what we really are doing is fighting for Exxon and Halitburton is impeachable.

Remember this: not one more American soldier should die over here, for it is a needless death that didn't have to happen...but only for the US occupation of Iraq.

One last note: Today, after my three-vehicle patrol passed through a certain stretch of highway, an hour to 2 hours later another patrol was hit by a bomb on that same stretch and ANOTHER AMERICAN soldier was killed and at least 3 of his comrades were wounded, hopefully they will all live.

NOT ONE MORE AMERICAN SOLDIER! NO MAS !

Please pray for us soldiers and we will pray for you and the Peace of GOD will see us through.

Leonard Clark (Damned Liberal serving in Iraq)

National Guard soldier serving and patrolling the mean streets of Iraq every day
Civilian occupation: Kindergarten teacher (inner city school) Public Schools

Good to see you posting, Peter.

Here's an on-topic sort of thing to ask you: Do you expec the
disappearance of most -- if not all -- tabletops from the SW market to
be permanent?

After all, it is the broadcasters who are cutting back on SW use, not
as much the utes, and the tabletop radio isn't necessarily the first
choice for a broadcaster. Certainly the portable isn't the first
choice for a ute listener.

Regards,

!

http://www.bext.com/replace.htm

Based on what Ihave been finding out in the last month pretty
much correct. I hope this line is a typo:
"For low voltage work, the 50V ECQ-P series from Panasonic
(available through Digi-Key) is excellent, but they only go up to
0.47pF" 0.47pF?? I hope that is 0.47uF.

Eletroclytics sound bad.
They sound wose when improperly biased.
I could hear no significant difference between the normal
unipolar one and the bi-polar units. At the very least shunt
them with 1uF polys.

And metalfilm resistors can be much quiter. I would love to
have the time, and money, to change all th carbon films in
one of my R2000s and compare the result to the other.

Worthwhile for SW? Clearly to some degree. I have found
the distortion caused by junky caps to be very significant.
The typical diode detector is clearly the worst, followed by
the alltoo common piss poor power IC. But caps can cause
the loss of of diffrence between "cofee" and "copy". In
inguistic terms it blurs the "frictive" and "plosive" sounds.
"Terry" and "Jerry" are other examples. Fro a clean, clear
and "strong" signal the diffrence is minimul. But for very weak,
sub S1 or with QRN/QRM it can make the difference beween
undersanding and just telling a voice is there. For non
native language, IE for me Spanish, I had noticed that I
required a much better signal to understand then with
English.

Grabbing the audio before it is so mungled, for the R2000
the Rec out is a good choice, using a good audio amp,
a small tub or MOSFET may be ideal, and using good
speakers or earphones can help. I decided that it was
well worth the considerable effort to use a better detector.
And seperate audio chain.

Distortion is just noise and degrades the audio in strange
and maybe unpredicatable ways. In my outboard ID strip,
synch and product detector, I am using metal film resistors
for all signal pathways. Overkilll? I don't know. A month ago
I would have, and did, scoff at the idea that the "fairly minor"
distrotions and colarations causd by caps power ICs and
diode detector could have ANY real effect. After all by the time
a radio wave makes it to my reciver from around the world,
with multiple hopes through a nasty ionosphere that in itself
does a good job at bluring audio, what is a little more here
going to hurt? Sadly a lot. I now have a higher "fi" post radio
audio chain then our main entertainment system. Of course
when listen to CSN&Y I am not dealing with weak signals
at the lower limits of "listenability".

Terry

Hi Peter

Nice to see you.

None of the areas I'm likely to spend much time in are apt to have repeaters.

I haven't been able to find a signal strength map, but some areas get a strong enough signal from the satellites to punch through a canopy of trees. Rockland County NY is an example. Great place for HF too.

I'm somewhat surprised I haven't seen ads for "high performance" XM antennas to reduce dropouts.

Aircraft are probably the ideal vehicles for sat radio.

Odds are if trees or buildings are between you and the satellite, a
signal dropout will be the least of your worries.

Thanks, I realised after rereading my posts that it sounds
like I am "down" on bipolar audio amplifiers. I want to make
it clear that, in my opinion, bipolar amps can sound as good
(ie low distortion, clarity etc) as the best tube/valve amp. But
is is much easier to be great amps with tubes or MOSETs.

I had intended to build one of the audio amps at:
http://sound.westhost.com/projects-1.htm
His designs are well thought out and work very well.
The Pioneer MOSFET amps were an accident and reduced
my time and expense.

As I experiment more with this I become more convinced
that much of the superiority of great radios like Drake,
NRD, AOR, has as much to do with their choice of detector
as with the PLL/mixers. I have no doubt that their superior front
end and mixer help a lot, but even a middle of the road receiver
like the R2000 benifit greatly from even simple, less then the
insane lengths I am going through, modes.

The most bang for the buck would be to build a good precission
detector and couple it to a good, low distortion, amplifier.
This could all be built inside of a receiver like the R2000 which
would allow the decent internal speaker to be used

Even a mediocre receiver like the DX398 is a whole new animal
with an outboard active detector and better audio amp, and using
synch detection open new doors. I wish I had the skill to bild SMD
micro projects because Ithink there is money to be made offering
a simple add on synch detector, audio amp. I am being forced to
build a simpler outboard detector for my wife's DX398. I am going
to try and multiplex the IF on to the audio record out 3.5mm connector.

Unless there is a demand, yes.

With SW broadcasters cutting back, manufacturers are looking at
the worldwide demand for receivers falling steadily. Let's face it,
most of us here, as enthusiastic as we are, don't need hardware that
tops a kilobuck for our hobbycraft. You buy heavy. I buy heavy.
Steve Lare buys heavy. But read the posts of users here...they're
not dropping cash topping a kilobuck on a receiver. And many were
drawn into the hobby to listen to the BBC, when signals were
plentiful and reception quality was near local. As BBC and DW have
exited the North American market, the dilletantes, of which there
are many, lost interest. As broadcaster after broadcaster exits the
market, more program listeners exit with them. Some move to

satellite radio. Most simply exit the hobby.

Lost interest, means an upgraded receiver not sold.

Now, the hardcores here, will be scoring utes and transatlantic aircraft, smaller broadcasters and harder to capture signals from overseas, but that's not easy. And the majority of SW participants aren't going to spend that kind of time and effort to pick up noisy, fading signals. You will. I will. Lare will. Maghakian will. And we'll all use heavy hardware to do it.

But that's four that I can think of in a swipe of the cortex. There was a time I could point to four times that many without taking a breath. Times have changed. In the 10 years I've been playing in this newsgroup alone. I barely recognize the bands from the time I first got into SW 50 years ago.

And most don't know that they can, despite what the HOA says, put up an external antenna. They don't want a confrontation, even if they're right, and they don't want a bullseye painted on their back with the community. Intimidation keeps a LOT of people, who would otherwise play harder with SW, from doing so.

So, there's diminishing activity and diminishing interest. There's also a LOT more noise. It's gotten so difficult to score a clean signal where I am, I can barely hear WLS sometimes. And my installation is no slouch job.

Who but the hardcores are going to put up with that? And spend heavy cash to do it? Few. To be sure.

So, sales of serious receivers are down. Toys and gimmicks are up. SW is seen as a gimmick, almost afterthought, to receiver manufacture. It goes into portables more designed for the beach than the shack. Along with more digital crap, that unless executed well, produces more noise than the signals being sought.

And always bear in mind, that in the US, shortwave has never been a part of daily life as it was in Europe. It's virtually always been a matter of hobbycraft here. And it's even seen dramatic diminution in Europe, where it was among the most important sources of broadcast content. When, Mark "Don't-Try-To-Confuse-Me-With-Facts Byford" decided to shut off North American streams, and let he and his school tie wearing buddies pocket the budget savings, he was totally misinformed about the size of the WorldService listening audience in the US. He believed that the numbers favored FM and internet. He was staggeringly full of shit. But then, he wasn't really interested in reaching the SW listening crowd, because we didn't fit the socio-economic targets he found desirable. He's not alone in that assessment of SW listeners. Broadcasters worldwide, as well as hardware manufactures all look at the numbers. And most decide we're not a market worth serving.

US is among the biggest and most voracious markets in the world (China is now giving us a run for our money) and if there's limited market need, here, most manufacturers are not interested in producing a product to fill it.

Manufacturers are in the business of providing commodities these days. The days of the passionate manufacturer serving the hobby by producing specialized toys are all but over. Hallicrafters couldn' survive today, even with their products made in Japan and China. Hammarlund couldn't survive today. There's a reason why Drake isn't making SW desktops, either. MBA driven boardrooms are no longer interested in producing products for boutique buyers. Ten Tec still makes receivers, but the bulk of their money comes from government contracts and their sheetmetal fabricating business. There's a budget to serve the hobby. But it's limited. And products are pricey. Good products, no doubt, but very pricey.

Even Icom is out of the SW business. They produced huge goverment and commercial contractors. Hobbycraft had limited access to these products, but even commercial contractors are getting out of HF, and amateur numbers, where the last passion for HF exists, are dwindling. Even dedicated amateur suppliers are turning attention away from HF.

No manufacturer is going to enter the market with a product that's saleproof. And for most manufacturers today, it's not about a product, a service, or serving a niche, it's about numbers. And they have to be large numbers to make it worth the effort to being servicing needs.

So, yes, I expect the absence of affordable performance desktops to be permanent.

> After all, it is the broadcasters who are cutting back on SW use, not

You're right. But then, hard truth is that they don't care.

They'd have to be larger. And more unsightly. Remember were
talking about a culture here that, in the main, prizes cosmetics
above everything else.

I've even heard complaints that the satellite antennae on cars
are too big, and too unsightly.

While not directly realted to SWL, this looks to
be a usefull, and FREE tutorial on various aspects
of electronics, covering basic analog circuits, AD,
and my favorite, "Ground Loop".

I am sure that at some point they are going to
demonstrate how perfect their test equipment is.
And I have no doubt that if you can afoard it, it
would would be killer gear.

Well it seems that David felt you were acting as his lawyer so I say
go for it on the billing. Due to the "public nature of the case" you
may wish to bill accordingly..... how much does Geregos charge on an
hourly rate???

Another problem is the issue of priorities. With the
exception of the SX-100 that I scored at Dayton,
I've not bought a radio for the shack since the Satellit
800 back in 2000. I'd love to grab an R-5000, IC-R71A,
R8, R8A or R8B, but the money needs to go elsewhere
right now. My other hobbies suffer accordingly, but
unless I want to end up owing an arm and a leg to
the credit agencies, I have to cut back and
reprioritize.

Heh. I just found out last week that the neighbors
thought I was putting up a clothesline last fall when
I put up my 50' random wire. I figured that the
height of it (10+' off the ground) would have been
a hint that it wasn't a clothesline, but then again...

> So, there's diminishing activity and diminishing interest.

Yes, I've noticed as summer came on, when people
started switching on the pool equipment, the
lights, and other outdoor items that the noise level
skyrocketed. I'm starting to think that a loop like
a Wellbrook isn't a bad idea after all, especially when
next year we'll be planting a swamp white oak
in the path of the random wire, and the random
wire will have to come down.

The problem here is that it's essentially understood
that it requires a certain financial commitment to
undertake a manufacturing job. I think that the
SW business can be done, but not on anything
approaching the scale of what was done before.
More like Wellbrook sized operations, I believe.

I think that there is a business for SW, but it will have
to be served by small companies. Small as in itty-bitty.
The audiophile companies haven't been put out of
business by the changing times with everyone and
their grandmother wanting home theaters, and the
catering of the few boutique makers to the obsessed
has continued.

GELDOF AND BONO INVITED TO G8 SUMMIT

LIVE 8 organiser SIR BOB GELDOF has been invited to address the G8 group of world leaders when they meet in Scotland next week (06JUL05).

BONO is likely to join Geldof at the summit at the Gleneagles Hotel near Edinburgh and the pair have asked former South African president NELSON MANDELA to accompany them, when they meet the leaders of the UK, France, Russia, Germany, USA, Japan, Italy, Canada and the European Union.

Geldof says, "It is going to happen but we still have to negotiate the when and the how. It will probably be July 6 or 7.

"We will say to these eight men sitting at a table to just do this thing.

"They have the largest ever democratic mandate to change things. It would be arrogant to ignore it."

Geldof also wants Mandela to take to the stage at the Scottish Live 8 concert at Edinburgh's Murrayfield stadium on 6 July, to coincide with the start of the summit - but he fears the 86-year may be too frail to travel.

He adds, "We are trying to persuade him to be at Murrayfield. We want him to be there because it is more politically symbolic than the London gig. That's where the political message comes home.

"The reality is that, frankly, I think he is too old and too frail but we are still trying to persuade him. I would love him to be there."

Yeah I know, fire up the radio and listen around.

Dug out my venerable Sony 2010 the other day and will be cleaning it up and getting the batteries back in. Wondering what's out there to hear on the SW band these days? Anything left of the Global HF Network or other good mil/ute things to copy (voice only, I fear I suck as a dittybopper - got my 5 wpm years back to get my Tech + ham lic) ???

What's left of the big broadcasters like BBC, Deutsche Welle, etc.

I'll have a couple antennae at my QTH to pull in weak sigs a Vertical that can run 15-10m and a long wire trap dipole that is for 160 - 10 m along with ant. tuner so hearing it ain't the problem, just a matter of what's to be heard.

Operate on 2, 6 and 10m on the ham bands, but not that often anymore.

Still intrigued by the magic of radio. Computers are fine, but hearing voices that comes thru the air w/o being connected to MaBell still do it for me many years into the hobby.

Well then Do look at the upgrading to the current general Calass or
even extra, today 5wpm is all you need beside the written test, and I
as I understand it even if you let the tech plus license lapse it is
good good for the Morse Credit

<< Well then Do look at the upgrading to the current general Calass or

even extra, today 5wpm is all you need beside the written test, >>

have been thinking about upgrading, I'm pretty well versed in radio theory having a mil background, so would just be the legal and operating issues to study for that. Was trained in army to copy 8 wpm (I was a voice intercept op, but we needed to recognise CW to some extent) and try as I may that's about as good as it gets with me.

Anyway, thanks for the reply, but the question was not geard toward amateur radio, but what to expect when I crank up the SW set again.

Dave

2422. American vs. European FM frequencies?

Newsgroup: rec.radio.shortwave
Date: 2005-06-29 20:53:24 UTC
From: ziphem@hotmail.com
Message-ID: <1120078404.614718.94950@g14g2000cwa.googlegroups.com>
Source record: 26006

I'm not sure if this is the right group, I really hope it is. If it's not, please excuse my post as a genuine error.

I would greatly appreciate some basic help on American vs. European FM frequency.

There's this car radio I want to purchase. It's available in Europe, but not yet in the United States. I have only a window of time to get it installed, so I'm thinking about the European model. I will use this radio solely in the US.

My question: Is there any difference between European and US radio frequencies? I wouldn't think so, since I think I remember it being the same. But would the two units really function any differently in terms of reception or tuning - meaning, would the European car radio model pick up all US FM (& AM?) stations? I'm specifically looking at:

The Sony MEX-R1 in Europe:
http://www.sony.co.uk/PageView.do?s...chnicalFeatures

The Sony MEX-R5 the US:
http://www.cardomain.com/item/SONMEXR5?ref=prgr

These SEEM to be the same products, they definitely look the same. The tech specs on the Euopean version's radio is:

-FM Tuner
Tuner Type SSIR-EXA
ABC (Automatic Bandwidth Control) YES
BTM (Best Tuning Memory) YES
RDS EON YES

-Tuner Station Presets
FM 18
MW 6
LW 6

Thanks very much for any info!!

can you let everyone know your physical location. I love trying to listen to stations everyone posts but most of the time I get nothing! I try to figure out where the signals are coming to and how far, etc.

I am in North Texas. Are there any others out there in this general area? Is this a "bad" area of the country for SW signals? I recently sent my SAT800 back to RLDrake for a "tune-up" so maybe I will do better when it returns.

Thanks!

Many aftermarket car stereos have a way to set the tuning increment to
either 10Khz/200KHz or 9KHz/50KHz setting.. If this is one of them, it will
say so in the manual.

Looking now at the specifications on this unit... you don't want to buy it.
If you want a built in DVD/video player, you will need to wait until the US
version comes out. The European model is a Region 2/PAL DVD player.

As for the FM tuner, that would be no problem at all. It is fully compatible
with US FM frequencies. The AM however is on 9 KHz increments, so most AM
stations would not be tunable.

Well said CHristy. But it IS the trend.

We want goverment to beat up "criminals" really hard for us.

We want the police to really HURT people when they arrest them.

We want the army to really HURT those prisoners in Abu Graib and
Guantanamo and the other prisons. That kind of toughness
will teach that K1MAN guy not to mess with US!

WE are #1 - and we are big and TOUGH and VERY masculine!

LOL!

Dubya et al, are going to do what?

"Voice of America gets flak over outsourcing decision"

By Sam Singer Washington Bureau - Chicago Tribune

Tue Jun 21, 9:40 AM ET

Labor leaders and activists have denounced the business community for years for "outsourcing" work to other countries. Now the federal government is planning to shift a handful of highly symbolic jobs overseas, and labor unions and lawmakers are protesting angrily.

The Voice of America recently decided to move part of its late night news operation to Hong Kong, possibly hiring foreign workers. That has caught the attention of the Democrats on the Senate Foreign Relations Committee, who are joining labor groups in urging the news service to keep the positions inside U.S. borders.

In a strongly worded letter to VOA Director David Jackson, 14 Democratic senators said the shift would undermine VOA's mandate to "present a balanced and therefore comprehensive projection of significant American thought and institutions."

Impartial advocates?

According to its charter, VOA must further long-term American interests by "presenting the policies of the United States clearly and effectively" while remaining a "consistently reliable and authoritative source of news."

That ambiguous language, which seems to provide for both advocacy and journalistic objectivity, lies at the heart of an ongoing tension over VOA's mission. The decision to move eight jobs to Hong Kong has inflamed that tension far beyond the number of employees affected.

The news service, which has been on air since 1942, receives its funding from the Broadcasting Board of Governors, which oversees more than a half-dozen government-sponsored international broadcasting services, such as Radio Free Asia and Radio Sawa, a U.S.-funded Arab-language pop music and news station.

VOA has a budget of almost $160 million and employs more than 1,400 workers. Some of them work overseas, but they are either U.S. citizens or freelance workers hired by regional VOA bureaus.

The service has never before moved an entire news shift overseas, and critics are afraid it won't be the last.

Some, including the senators who signed the letter, hold that VOA's function as a mouthpiece for American values precludes it from contracting out writing work to non-citizens.

"We find it difficult to believe VOA will be able to satisfy its mission of projecting `significant American thought' through non-American citizens," the letter said.

One of the signatories is Sen. John Kerry (D-Mass.), last year's Democratic presidential nominee and a member of the Foreign Relations Committee.

Jackson sees things differently. He said expansion in East Asia will allow the service to be closer to an increasingly important source of news.

Aside from its government funding, the director said the distinctions between VOA and other international news networks are few and far between.

`We don't do propaganda'

"We are independent journalists," Jackson said. "We cover stories because they're news. We don't do propaganda."

In this light, he said, the Hong Kong decision was nothing more than an efficiency measure--a way to get news to international audiences more quickly. "We need to move faster to cover news, and we need to be closer to the action," Jackson said.

Some labor groups don't buy it. Although the job shuffle will involve only eight employees, it will save VOA almost $300,000, mostly in health-care costs. The powerful American Federation of Government Employees argues that VOA's decision is financially motivated.

John Threlkeld, a lobbyist with the federation, said the posts in question are not for reporters but for English language news writers--positions he said need no proximity to the source of the news.

Tim Shamble, president of the Washington chapter of AFGE, questioned Jackson's interpretation of VOA's mission.

"Voice of America is a publicly funded broadcaster with a clearly defined charter," Shamble said. "You write news from the American perspective. You're never going to have a huge audience. You're not a commercial broadcaster."

Each of the eight writers affected staffs the midnight shift in VOA's Washington office, and they would be transferred to other

jobs in the agency's Washington headquarters.

Jackson said VOA has processed transfer requests for all eight employees, and that no jobs will be lost during the transition.

Although plans to move operations to the Hong Kong bureau were announced in April, no definitive hiring decisions have yet to be made. VOA hopes to have the new Hong Kong staff active within the next few months.

Since about 11:45z, triple one (11.175) has been 'minopolzed' by what I would describe as a 'net operation'. There have been coms between units, rather than from unit to main stations. I even heard one unit with a strong asian accent.

It is now 00:15. Still going strong. Check it out.

I'm the guy on the right.

Well, actually, no, not really.

I'm not the guy on the left either OR the photographer.

It's pretty easy to forget people in the background who keep things running.
Life becomes a lot easier for the rest of us because of their work. They don't
even go around kissing babies every four years and THAT is an admirable trait.

You would have to do it like the earth stations for tracking deep
space satellites. You use a diversity system built with two or more
receivers and a combiner.

BBC is winding down their Americas services. They can still be heard with the Caribbean service on 5975 from 2200-0100 (I think) and with news for South America on 9825 from 0200-0300. Another very strong signal from them, especially if you're out west, is a Spanish language service on 5995 from 0300-0400 that totally drowns out Cuba on 6000. DW no longer broadcasts in English to the Americas. If you're on the east coast (which I suspect from your call, but one never knows) you may be able to hear the African service at 0600, can't remember freq. Radio Netherlands still has a full service to North America, try www.rnw.nl for schedules. They don't broadcast much news anymore, just analysis and commentary. The Cubans are still around, but scheduled broadcasts from Delano and Sackville have rendered 6000 useless, possibly by design. 9820 is the best bet for them. A new kid on the block are Asian stations, not only old standby Japan but also China, which has powerful signals to North America, and Thailand, which has the benefit of having access to a major VOA transmitter farm on Thai soil. You'll also find that the net has many constantly updated frequency databases, such as Eibi (a text file) and searchable database ILG. Passport to World Band Radio still comes out once a year, but its info is often outdated, even at press time, and the net databases are much better, although not as easy to use as a book (although Eibi can be printed out on a laser printer and put in a three ring binder).

I tuned to 8743 usb earlier this evening. Two Spanish speaking men were "talking" to each other by reading series of letters and numbers. I figured it was some bizarre variety of numbers station. However, I started writing down what they were reading and the letters were spelling English words. I picked up the words "vessel", "reassure" and "any".

Anyone have an idea what this was? Why would these Spanish speaking men be spelling out English words to each other?

Wow, thank you SO much for the info, I really appreciate it. So my best bet then is to wait until the US version comes out. If the US one doesn't support MP3s on DVDs (which I think it will, it seems like the same unit), I can always buy the European model. I'm really getting this unit for the MP3 on DVD capability anyway, that's my primary purpose.

Thanks a ton for the help, it's definitely helped me out.

NTVX is an independent free radio organisation. (We do not like the term 'pirate' as it has negative implications.)

I am able to confirm that we have indeed been conducting HF test transmissions on the 40m shortwave band prior to launching a new slow-scan television operation.

We are pleased to see that our test transmissions have apparently been received by at least one person judging by the mention we have received across various newsgroups.
We have recently received several requests via email for more information about the station.

We do not plan to fully open our information website for anything other than QSL reports of our test transmissions until we commence regular broadcasting later this year However we will acknowledge all emails that reach us and have issued the following statement on newsgroups where NTVX has been mentioned.
.....
NTVX Shortwave 'pirate' TV - HF Test Transmissions
.....
NTVX successfully concluded a series of test transmissions for a new slow-scan television operation on 1/6/2005. Regular broadcasts on 40 metres (shortwave) are expected to commence from September 2005. Contributors welcome.

During my listening, I logged 15 callsigns. One unit apparently had a
callsign of 'sky king' (not as in 'do not answer'). There was a reference
to 'exercise yankee'.

There have been reports of Naval operations (exercises) from time to time.
Since I have been monitoring this frequency and following this newsgroup, I
don't recall any references to exercises being conducted on 'triple one'.
Does it seem logical that this frequency would be tied up by such an
exercise?

There was a SKYMASTER callsign which was widely reported.

Hi,

Saw the SAR post re 5717 of a few days ago.

New at this.

Is this a very common, and often used SAR freq. ?
Any others used more often off of eastern seaboard (I'm outside of Boston) ?

Is it USB ?

Thanks,
B.

It is USB. At least in my experience, 5717 is the most active frequency
for the Canadian Coast Guard. It seems like once every few months I
catch a little 'drama' on this frequency.

I heard that also, though I thought it was 'beer tag'. I guess 'deer tag'
makes more sense.
Also heard were:
trip tank
lilly one-two
selma 0-4
skymaster
Aloe Oil (sounded like oligo olio [Italian for garlic in olive oil])
grape vine
sky king
bowlfish
lance one-one
birdsnest
identical (sounded like a strong base station)

For anyone who's interested, I made a short recording of this before it ended. You can listen to it if you copy the URL provided below and then paste it into your address bar. (Just clicking on the link will not work. You have to put it in your address bar.)

http://renopithicus.tripod.com/8743usb.wav

There's a bit of chatter in the background. My high school Spanish is too rusty to allow me to understand it, but it might shed some light on what's going on. In any case, in this clip you can hear the one guy spell out the words "vessel", "operate" and "any".

Steve

sdaniel13@nyc.rr.com wrote:

I dropped into a local mall where Radio Shack has held sway for years and they were still doing business at the same old stand: the same people, and much of the same stuff hanging on the walls. However, the big red RADIO SHACK sign, which we loved to hate had been replaced by a "the SOURCE by circuit city," a curious name that for now, had no emotional response. Inside the store, all the wall cards of components were in the same place but renamed in fresh packaging as "NexXtech." Some new brands, never seen in the old Radio Shack, such as Acer and Pioneer were noted as were the absence of the horrible Compaq, whose proprietary bios has caused so much difficulty. There seemd to be a few more radios in stock: eton, Grundig, and some Chinese offerings not seen before including an interesting twin-speaker digtal am/fm/sw portable for C$89. I have seen the same model branded as "the Sharper Image" on ebay for about US$40.
At the moment, Radio Shack corp is scouting for new locations in Canada to build a chain based on the US store offerings. A recent visit to a nearby US Radio Shack showed that they still had some components so there are some differences. There are hundreds of old Radio Shack (now the Source)locations in Canada so Radio Shack will have an uphill climb to open its new stores selling similar products but with the low cost of Chinese imports and the huge mark-ups, there is lots of loot to be made by savvy marketers. Maybe there will be some competition and lower prices soon. The Source website is <www.thesource.com>

thesource.com seems to be some sorta Rap/Hip Hop-oriented magazine.

CircuitCity.com is a big U.S. consumer electronics chain out of
Richmond, Virginia. It isn't too bad but the only shortwave radios at
the U.S. site are some cheapies, Grundig hand crank models and the
Grundig G2000A.

Once again, Radio Shack in Canada has been differing from the USA version
for some years. "Nexxtech" is not a new brand, and neither is their
"Centrios"; both have been used for some time now. It's been some time since
there was much in the way of items branded with "Radio Shack" in the Canadian
"Radio Shacks"; one of the few things they had to clear out was the Radio
Shack batteries. Even the parts had "Nexxtech" on them. While I have
no idea what it's like in the US, well known brands have been available
at Radio Shacks in Canada for some years. So they carried Grundig radios,
rather than Radio Shack rebrands, you could get RCA items, and Panasonic
and whatever other common brands there are.

Again, Circuit City has owned Intertan here in Canada for some years. This
name change is the result of a legal decision, but the fact that there
is a name change is not an indication of any other changes. They had to drop
the name and the items with the name, but they were already diverging from
the US version of Radio Shack. Perhaps they will drop parts, again, but it
won't be because they are no longer Radio Shack.

Micahel

Which brings to mind... whatever happened to the shortwave outlet of the
college radio station in Mexico City? They were on the air just a few
years ago.
--scott

I think what will keep shortwave going is that it's fairly inexpensive to
hang a small shortwave outlet off an existing station or network. Even if
you are broadcasting primarily on a network of FM stations, hanging a small
1KW shortwave transmitter off your net adds fairly minimal cost and these
days pretty low maintenance. It doesn't get you a huge audience, but
that's okay. I think the 250KW powerhouses are doomed, though.

2470. Chinese Military has Conducted Sucessful Matter Teleportation Experiments

Newsgroup: rec.radio.shortwave
Date: 2005-06-30 23:17:08 UTC
From: quackadoodledoo <LiChangchun@ccp.gov.cn>
Message-ID: <11c8vd616ine4bf@corp.supernews.com>
Source record: 25959

According to a research paper commissioned by the Air Force Research Laboratory, the DIA has translated peer-reviewed Chinese journal articles describing Military-overseen experiments into the teleportation of matter using mental power alone. Living organisms were teleported through sealed containers, as well as radio transmitters. The Chinese have (allegedly) sent radio signals into hyperspace, the fourth dimension, the beyond, or whatever you want to call it!

I've sent a FOIA request about 2 months ago requesting the full text of the described articles. So far I've only received the form reply stating that they're really busy and it could be a long, long time before I hear from them again. I'm not saying I put much faith in the reports, but three factors made me decide there might be something to them:

1.) They were detailed enough to catch the eye of the DIA.
2.) They appeared in peer reviewed science journals.
3.) The experiments were not just Chinese fringe scientists' pet projects, they were overseen in many instances by brass.

Some excerpts:

Reported in several articles are experiments involving the videotaping and high-speed photography of the transfer of test specimens (nuts, bundles of matches, pills, nails, thread, photosensitive paper, chemically treated paper, sponges dipped in FeCl3, etc.) through the walls of sealed paper envelopes, double layered KCNS type paper bags, sealed glass bottles and tubes with sealed caps, and sealed plastic film canisters without the walls of any of these containers being breached. All of the Chinese experiments reported using gifted children and young adults, who possessed well-known extraordinary PK ability, to cause the teleportation of the various test specimens.

and another:

the radio micro-transmitter used as a test specimen in one series of experiments (Shuhuang et al., 1981) transmitted a radio signal to several stationary electronic instruments/receivers, so that the specimen could be tracked and monitored (via signal amplitude and frequency measurements) during the teleportation process; the experimenters discovered that there was large fluctuations in the intensity (in both amplitude and frequency) of the monitored signal to the effect that it would either completely disappear or become extremely weak (to the extent that the monitoring instruments could scarcely detect it) [illegible] it was discovered that there was a definite correlation between the change in strength (i.e., radical frequency shifts were observed) of the monitored radio signal and the teleportation of the test specimen, such that the weak or absent signal indicated that the

specimen was nonexistent (or in an altered physical state) during teleportation (note: the monitored signal amplitude and frequency of the micro-transmitter specimen were stable before and after teleportation);

Down to five days till I'll be free.

Last week I fired myself so I am job less, next week I sell the house so I'll be homeless.

I'll stay in the motor home until the check clears then I'll buy a ticket to the Philippines.

I have shipped 31 boxes of "stuff" and should ship maybe 10 more next week.

Looks like I am out of here.

How do these radios compare? They were both relatively modest relatives of the expensive rigs being sold at the time. Anyone with experiences in comparing the two? The tuning seems identical to the FRG-7's Barlow-Wadley system, with the addition of the digital display, of course.

Cookies have to be enabled and a virus checker is most likely in order..They seem to have a good selections of schematics.

Handy Shortwave Chart
Bill McFadden
billmc@agora.rdrop.com

Band allocations and time zone conversions for the USA. Includes broadcast bands used outside the USA. Also includes WARC-92 broadcast band extensions, which may be used before April 1, 2007 on a secondary (non-interference) basis. For multi-use bands, most common usage is shown. Some stations operate outside the official bands. Information is from Sep 2000 NTIA allocations table, see:
http://www.ntia.doc.gov/osmhome/allochrt.html

Frequencies are in kHz. Usual spacing in shortwave broadcast bands is 5 kHz. Frequencies above 10000 kHz tend to propagate better during the day; frequencies below 10000 kHz tend to propagate better at night.

Please e-mail suggestions and corrections to billmc@agora.rdrop.com.

Phone line as SW antenna
Bill McFadden
billmc@agora.rdrop.com

Changes preceded by "|".

WARNINGS AND DISCLAIMERS

Connecting unapproved devices to phone lines may be illegal in your area. Telephone lines present a potential shock hazard. Do not use this antenna for transmitting. Use at your own risk.

INTRODUCTION

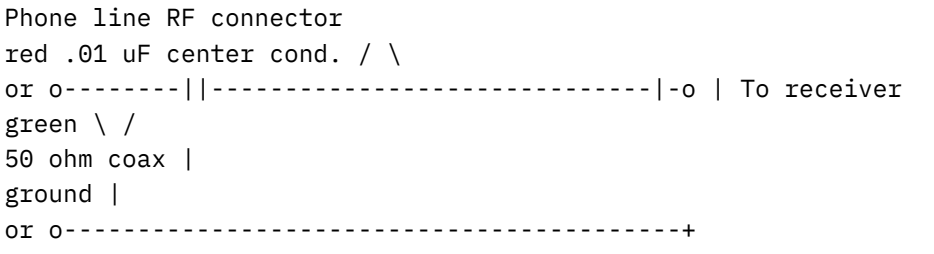
This article describes how to use a phone line as a shortwave receiving antenna. Performance will vary depending on the kind of phone line you have. Overhead lines usually make okay antennas, while underground lines usually don't. A phone line antenna will generally pick up more power line noise than a dedicated antenna, so don't expect to use it for DX work. Nevertheless, I find that it outperforms the telescopic whip antennas built into most portables.

A reader sent in this suggestion: If you're concerned about connecting the phone line directly to the receiver, try wrapping the phone cord several times around the receiver's telescopic whip antenna instead. Performance may not be as good as a direct connection, but it will probably be better than the whip antenna by itself.

Someone else wrote asking about lightning protection. I haven't thought much about it because thunderstorms are rare in my area. Most phone lines have lightning arrestors on them where they enter the house, but the lightning arrestors may pass enough energy during a lightning strike damage a receiver. My suggestion is to disconnect the antenna when not in use if you experience frequent thunderstorms.

HOW TO DO IT

The simplest connection is a single capacitor between the phone line and receiver. The capacitor eliminates all phone line voltages, including ringing, so that they will not harm the receiver.



N.C. = no connect. I originally connected the phone line ground (yellow wire) to this terminal, but reception was better without it (if you do this, play it safe and put a .01 uF capacitor in series). If another ground is available, you can connect it to this terminal.

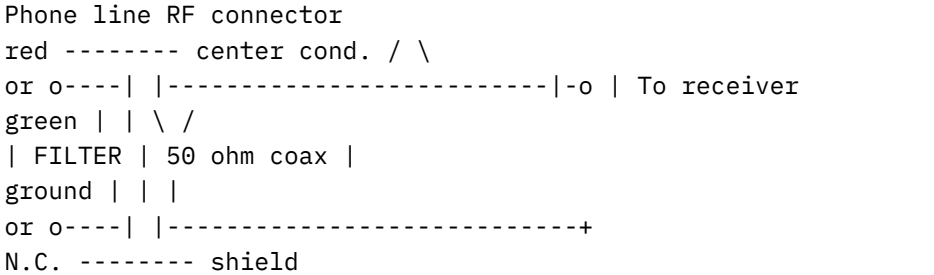
If you are picking up local AM or FM radio stations on the shortwave bands, it is likely that your receiver is overloaded. Inexpensive and portable receivers usually lack the filtering needed to eliminate this interference, but you can make your own filters. Filters can also be purchased from some shortwave dealers.

A high-pass filter can be used to remove signals below the shortwave bands. It rejects interference from local AM stations and presents a high impedance to the phone line at audio frequencies so that the phone line remains balanced.

A low-pass filter can be used to remove signals above the shortwave bands. It rejects interference from FM and TV stations, as well as VHF 2-way radio transmitters. If you use both filters, connect the output of the first filter to the input of the second (don't forget to connect their ground terminals together). It doesn't matter which filter is connected first.

By the way, these filters also work well with random wire antennas. Just connect the antenna in place of the phone line.

The filter(s) should be connected to the phone line in this manner:



FILTER PLANS

The original credit for the high-pass and low-pass filters goes to Paul Blumstein and John Shalamskas, respectively. Edited versions of their articles are included here:

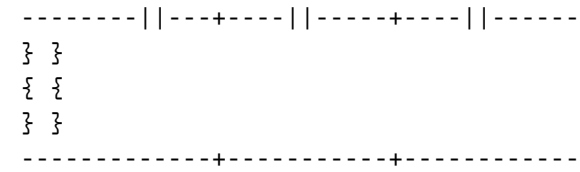
Date: 09 Jan 91 00:54:08 GMT
From: paulb@harley.TTI.COM (Paul Blumstein)

Subject: BC Band Hi-Pass Filter

The following ascii-schematic diagram is a high pass filter that will filter out Broadcast Band (MW) stations. I found it a great boon to my shortwave listening since local MW stations overload my ATS-803A front end & appear in SW, especially with a long antenna.

If you remember my antenna saga, I went from 50 feet to 150 feet & had overload problems causing me to cut back to 50 feet. (Even at 50 feet, I still have some MW interference). I took the advice of Gary Coffman and looked up filters in the ARRL Handbook. With the filter in place, I intend to try to increase my antenna length again.

Anywho, here is the filter, for interested parties.



The outer capacitors are 1500 pf ceramic disks.
The inner capacitor is 820 pf ceramic disk.
The squiggly things are coils (two total). Each one is 2.7 uh.
(a close value will do).

Date: 12 Jan 91 00:44:25 GMT
From: bill@videovax.tv.tek.com (William K. McFadden)
Subject: Re: BC Band Hi-Pass Filter

I built the filter that Paul Blumstein posted recently and measured it on a gain-phase analyzer. Here are its characteristics:

100 kHz -120dB
500 kHz -68dB
1000 kHz -38dB
1600 kHz -15dB
2100 kHz -3dB

The source and load impedances were 50 ohms. Because the filter has five elements, the attenuation is 30dB per octave. The measurements confirmed this.

This filter seems to be a good compromise between interference attenuation and passband response. There is very little attenuation in the 120m band and above. It could use a little more attenuation at the upper end of MW, which could be done with more stages or a higher cutoff frequency. Alternatively, you could build two of these filters and put them in series. (Since two 1500pF capacitors in series are really 750pF, you could eliminate one cap.)

Just for fun, I put 470 ohms in series with the input to see how the filter performed with an antenna mismatch. The response was:

100 kHz -105dB
500 kHz -60dB
1000 kHz -35dB
1600 kHz -15dB
2300 kHz -3dB

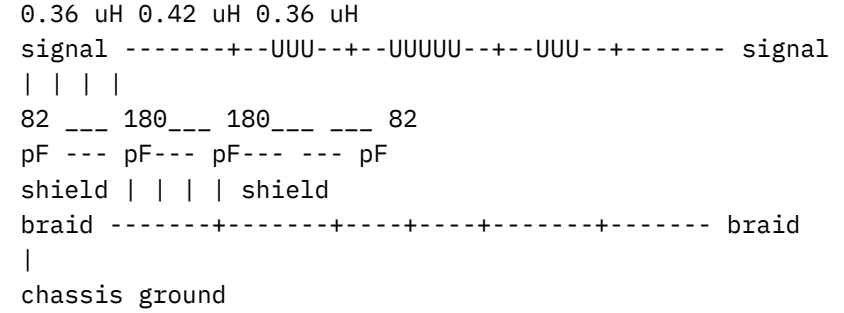
These figures are normalized to the passband response of -15dB, which is due to the impedance mismatch between the source and load and would have been there without the filter. Hence, the filter works almost as well in spite of the mismatch, which is good news to those who use long-wire antennas.

Date: 22 Apr 92 08:59:33 GMT
From: johns@uhunix.uhcc.Hawaii.Edu (John Shalamskas)
Subject: Construction of filters for SW reception

Several people have asked for construction details of the filters I built for my DX-440.

The high-pass filter helped some, but in my location the VHF/UHF broadcasters are also causing problems. So, I dug out the ARRL handbook and chose a 7-element Chebyshev low-pass design that is -3 dB at 35 MHz, -20 dB at 43 MHz, and -50 dB at 64 MHz (all calculated; it works well in practice!)

LOW-PASS FILTER (Rejects FM, TV, etc.)



I had to do a little more improvising at this point. I used .33 uH instead of .36, and .66 uH instead of .42, but it works fine.

The 5-lug terminal strips were perfect for these circuits, since there are 4 lugs plus a grounded lug. All "ground" connections go to the lug that is mounted to the chassis, and the other 4 lugs are used for each of the connections on the signal line. One terminal strip is used per filter. Since both filters were necessary to clean up the hash, I am going to put them both into one box when I get the time.

The proper way to connect them is in series, i.e.

signal in ------- filter 1 -------- filter 2 -------- signal out

There is no difference between ends. They are "bilateral" which means you can't possibly hook them up backwards. (In the above schematics, left and right ends are interchangeable.)

COIL WINDING

You can make the coils yourself using this formula:

L = 0.2 * B^2 * N^2 / (3B + 9A + 10C)

L is the inductance, in uH
A is the length of the coil, in inches
B is the mean diameter of the coil, in inches
C is the diameter of the wire, in inches
N is the number of turns

For small wire, you can assume C = 0.

PARTS SOURCE

All of the parts for the filters can be obtained from the following source:

Digi-Key
http://www.digi-key.com/
701 Brooks Av S
P.O. Box 677
Thief River Falls, MN 56701-0677 USA
Voice: 800-344-4539
FAX: 218-681-3380

PART DIGI-KEY PART NO.
82 pF capacitor P4023
180 pF capacitor P4027
820 pF capacitor P4184
1500 pF capacitor P4187
0.33 uH inductor M8007
0.39 uH inductor M8008
2.7 uH inductor M8018

The cost of these parts is less than $1 each.

Also, don't forget that the European model will have a 50uS deemphasis characteristic for the FM range vs the 75uS characteristic for the North American model. The result is that the European model will have a slightly more trebly sound when used in the US.

Pete

2487. Sony ICF2010 21st Anniversary Archive CD

Newsgroup: rec.radio.shortwave
Date: 2005-07-01 10:46:35 UTC
From: steve whitt <stevexxwhitt@uk2.net>
Message-ID: <1120214795.223030.17570@g44g2000cwa.googlegroups.com>
Source record: 25976

This year is the 21st Anniversary of Sony creating the amazing
ICF2010/2001D radio which I suspect is owned and used by many members
of this group.

I have been a keen user of this radio and some years back I published
two booklets "Get the Best from your Sony ICF2010/2001D" and "Get Even
more from..."

Over the 21 years that the 2001D/2010 has been around, a huge amount of
information has appeared in print & on the web.

When I wrote "Get the Best from your Sony ICF2010/2001D" I collected
lots of stuff. And over the years I've accumulated more material.

Recently I archived my own files onto CD as a personal archive and I
realised that I had material that was no longer available in print and
which had vanished off the Internet!

Over the years people have asked me if my two booklets were available
electronically, but the answer at the time was always "no". Now however
I included them on this archive CD.

It then dawned on me that maybe other people would be interested in
such a CD. I'm happy to reproduce it for anyone who wants it for their
personal use and enjoyment - this is not a commercial enterprise.

SONY ICF2010/2001D CD ARCHIVE
==========
The CD contains the following
1) Get The Best from Your Sony ICF2010/2001D
2) Get Even more from Your Sony ICF2010/2001D
3) Adverts (a selection promoting the 2010)
4) HotRodding (various items on how to modify/improve)
5) Miscellaneous
6) Photo Gallery;
including photos of different versions from different areas of the
world
7) Repair
Repair tips
Parts; sources and spec sheets
Repairers
8) Reviews
Solo;
Comparative;
International (non-English)
9) Service Manuals

2 different Editions including high resolution colour images of
circuit boards and circuitry
10) More Sony Stuff (Including User Guide)
11) Bibliography

In total there are over 500MB of files on the Archive CD. Files are in
a variety of formats including .doc, .pdf, .bmp, .jpg, txt and .xls

ORDERING
==========
There are two ways of ordering a copy of this CD

1) By post.
Write to me enclosing payment, and your mailing address and I will send
you the CD by return post.
Write to me at: Landsvale, High Catton, York YO41 1EH, England
Cash payment can be $11US; 10 Euro or £5 Sterling notes well concealed
inside an ordinary letter envelope. If you don't want the risk of
sending cash in the post, I recommend registered post.
Non-cash payments such as cheques, Postal Orders or International Money
Orders must be £5.00 Sterling.

2) Over the Internet
You can pay by PayPal by sending payment to: icf2010ATuk2DOTnet
[replace AT with @ and DOT with .]
The PayPal prices are $11.75US; 10.75 Euro or £5.50 Sterling due to
the charges levied by PayPal.

Prices include post and packing. All orders will be despatched by post
in a protective envelope and overseas orders will go airmail. I only
use high quality CDs, such as TDK, to ensure you have a reliable and
long lasting archive.

A GREAT DEAL
===============
This unique CD contains a valuable archive of material, some of it
rare, all of it interesting.

If you have any further questions please don't hesitate to ask.

best wishes

Steve Whitt
icf2010ATuk2DOTnet [replace AT with @ and DOT with .]

CALL STEVE
(Debbie Harry/Blondie/Purple Haze)

Cold nuts this winter, baby,
Call Steve to keep them warm
Need a blowjob this winter, darling,
Steve'll go down wherever you are
Steve'll use all his charm,
He likes to drink his cum lukewarm

Call Steve, Call Steve
For that wet blowjob
Call Steve any, anytime
Call Steve, Call Steve
For a wet blow job
You can call Steve any day or night
Call Steve

Steve covers dicks with kisses, baby,
Steve covers testicles with love,
Hairy, sweaty, or sal-ty, maybe
Steve can never get enough,
Faggots call Steve, he don't know why,
Breathless Steve never runs out of k-Y

Call Steve, Call Steve
For that wet blowjob
Call Steve any, anytime
Call Steve, Call Steve
For a wet blowjob
You can call Steve any day or night
Call Steve
Steve sucks on anything,
When you're ready, Steve can swallow your jing
Call Steve

[Break]

Oooooh oooohh Niggerdicks are Steve's only love,
Oooooh oooohh Niggerdicks, Steve can't get enough,
Oooooh oooohh Steve, moi cherie, au revioir
Anytime, anyplace, anywhere, anyway....
Steve'll suck anytime, anyplace, anyday---ay

[Break]

Call Steve, Call Steve
Sucking niggerdicks is his life
Call Steve, call him any, anytime
Call Steve, Call Steve
Call Steve for blowjobs some other time
Call Steve, Call Steve
Sucking niggerdicks is his life
Call Steve for his sweet desire
Call Steve, Call Steve
Call Steve for his lovin' of your dick big-time
Call Steve, Call Steve
Sucking niggerdicks is his life
Call Steve any, anytime
Call Steve, uh-hummm,
Call Steve

I'll be north on Manila for the first year then we should have a house built
on Palawan.

Yes, I am retired, sold my business, homes and cars. Keep the motor home
just to have something to stay in when we come back for a week or so.

I'll still be on line, having DSL put in next week.

I am looking forward to doing a lot of DXing, fishing and diving.

In a Sony tuner I have when you switch from 100K to 50 k
(and 9K to 10) tuning steps(o r the reverse) it also changes
the deemphasis.

After opening the can of worms regarding AM/MW and maybe SW
pre/de-emphasis, I was doing some more searching and found
that there is a standard for audio CD that has demphasis.
See:
<http://www.diyaudio.com/forums/showthread/t-23176.html>
"time constants as 50Us and 15us"

<http://www.diyaudio.com/forums/showthread.php?s=&threadid=17775&highlight=cd+deemphasis>
Some disks that have this un-nice feature:

Some of the discs I have that have pre-emphasis:
- Glenn Gould, Goldberg Variations (Sony, 1981 version)
- Emma Kirkby collection (Hyperion)
- Several Sheffield Labs (Dave Grusin, Amanda McBroom)

This could explain why some old audio CDs I have sound "funny".

It think the FRG-100 is newer than the R-1000. Even the FRG-8800(?)
was newer. Contemporary with the R-5000.

The R-1000 is a late 1970s design, judging from the guts. (I got
mine on a closeout in the early '80s). It's not a Barlow-Wadley.
It's synthesized for 1 MHz, and then has a 1 MHz wide analog tuning with
the VFO.

It's pre-microprocessor. The synthesizer is an amazing pile of 74Sxx TTL
and a bunch of balanced mixers combining the VFO and the synthesized xtal
oscillators, feeding a bank of phase locked oscillators to clean the LO
up and feed the mixer (High side of a 45 MHz first IF), and a seperate
output to feed the frequency counter (455 kHz above signal freq), which
uses a stock OKI frequency display/clock chip, (and seems like a last
minute add on). Display reads the center frequency of the bandpass,
to 1 kHz.

The signal path is a couple of built in 500 ohm matching transformers,
always used below 2 MHz, and optional for the HF antenna input. Then a
big bank of diode switched bandpass filters. The mixers are balanced
double gate MOSFETS. They must not have been too sure of it's overload
performance, there's a gain spoiler circuit that lowers the sensitivity
to 50 microvolts below 2 MHz. IF bandwidths are 12(!), 6 and 2.1 kHz,
with the front panel buttons reconfigurable with an internal plug/jumper
so that "wide" and "narrow" AM can be either 12/6 or 6/2.1 kHz.

Audio is OK, much better out of the "record" jack. (The tone control
does affect the record jack output).

You can't make the front panel much simpler. The only trap is the
damn antenna switch on the back.

But the quirks are that it's not stable enough for RTTY or probably CW
listening. (probably why it doesn't have a narrowband filter). And the
Medium Wave sensitivity is deliberatly stomped. And every couple of
years you have to hit the MHz switch with tuner-lube, and resolder the
power supply circuit board.

Some day I'm going to download the repair manual for the R-600.
Despite the lower number, it's a newer receiver that simplified a lot
of the circuitry and cost a bit less. But the Yen went from 300 to the

dollar to 100 to the dollar back then, so I've not seen that many.

Mark Zenier mzenier@eskimo.com Washington State resident

Nope, it isn't RIAA, it is a different curve all together.
That is why Iposted the data and links. I had always assumed
that the output from a CD was "flat". I am looking at a SEMPTE
publication from1985 that gives more data then I can use on
the various pre/de-emphasis standards. From what I can find out,
any CD made in the last decade has been "flat" but "high end"
early CD adhered to a now ignored standard. I have some
German CDs that have always sounded like the high end was
jacked up. Mason Proffit's "Two Hangmen" has an very over
bright high end. I have a home made 24Bit, 44.1KHz wav I made
from a virgin alblum,using good high end equipment that sounds
great. A friend gave me a re-release of the German CD and it
sounds correct. I am going to test my original CD and see if this
deemphasis will correct it.

My wife has a quite a few geramn symphonic CDS that sound too
" bright". And I thought that since I had left vinyl behind I didn't
need
my multi standard EQ unit......

Hi Brian

Sounds incredible but don't be so sure there is not some truth to it. Plus the site it's on doesn't look like a quack site to me. This is who they are{ read below}.

Also the mind is extremely capable of things of which we have no understanding. Most of us only use 10% of our brain power. What happens when we can use say 20 to 50% of our brain power?? What if you are born that way?
==========

The Federation of American Scientists is a nonprofit, tax-exempt, 501c3 organization founded in 1945 as the Federation of Atomic Scientists. Our founders were members of the Manhattan Project, creators of the atom bomb and deeply concerned about the implications of its use for the future of humankind. FAS is the oldest organization dedicated to ending the worldwide arms race and avoiding the use of nuclear weapons for any purpose.

Hi Burr

My cousin has lived there on and off. He says he likes it. Money goes far and the girls are just very sweet and are very loyal to their men and treat them very nice. Personally I think it's still a dangerous place for Americans to live in this time and age.

Canada day observation on 17,675 MHz

Apparently this started with Dominion day.

Proclamation requiring celebration of July 1st: on June 20, 1868 a proclamation issued by the Governor General, Lord Monck, enjoined and called upon all Her Majesty's loving subjects throughout Canada to join in the celebration of the Anniversary of the formation of the Dominion of Canada on the 1st of July, 1868. This proclamation, a copy of which is attached, was published in the Canada Gazette on Saturday, June 20, 1868.

The FRG-100 is a true digital radio with precise frequency readout. It is an underrated receiver with excellent stability and sensitivity. Audio is a bit "muddy" but can be improved with minor capacitor mods.

The R-1000 is also an excellent receiver but is not a true digital receiver. It is analog tuned with a varicap with a frequency counter readout. It is also a very sensitive and relatively stable receiver, especially for its time. It's tuning ratio is OK for SSB, however, the FRG-100 to totally superior with fast/slow tuning speed selection.

I have both receivers and use the FRG for the tough DX and R-1000 for more casual band tuning and desert camping expeditions. There's not much you can hear on one that the other can't pick up. The older R-1000 has less features for tailoring the receiver's characteristics.

Not necessarily. As long as you stay out of the Muslim areas you should
be relatively safe. Christian Filipinos are still relatively friendly to
Americans, despite their experiences with Marcos. The Philippines had 50
soldiers in Iraq until they decided that the heat was too much to bear
staying in the kitchen. Filipino troops are trained by American soldiers
on how to fight their own Muslim insurgents. If you want to be literal,
any place outside of the US is dangerous for Americans to be nowadays.
But I'd rather be in the Philippines or Thailand than some places in
Europe.

Those stations in Latin America that operate as FM nets already have the
necessary domestic coverage. SW in that area will increasingly be exclusive
to cultural, religious and such type broadcasters who can afford to run
stations with no "measurable" audience.

He interacts with normal people? I mean, outside of rrs? Most liberals
stick with their own kind. Then again, so do most fundamentalist
Christians. It's all part of the sad trend of people creating little
micro realities for themselves where only preapproved opinions are
allowed.

Bush is stupid, but I think "demon from hell" is a bit much. OTOH, I
would certainly describe some of the people surrounding him that way.

David is not a useful idiot, he's a useless idiot. To be a useful idiot,
one must generally be being used by people who are in power somewhere.
Since liberals have no power, he really can't be useful.

Did you mean R-1000 and FRG-*7700*, by any chance? You can find some
measurements for those (along with the FRG-100) on the Sherwood
Engineering page:
http://www.sherweng.com/table.html
The Kenwood should be the better performing of the two overall. Note the
comparatively high phase noise of these semi-synthesized sets. I think
the Sony ICF-6800 employed a similar receiver concept. Not sure whether
it's as closely related to the Wadley concept as you think... I suggest
you get the R-1000 service manual off the web and read the functional
description.

But..you, being from the future, would KNOW he wasn't a quack....I don't think you'd be laughing at all but wondering just HOW this person could be predicting what they are. It would also be a good time to set up an investment portfolio. You would be cashing in on Coca Cola shares now, not to mention the money to be made at the bookmakers.

A friend is making some PCB boards for my
AD607 synch detector project so I tried
something else.

Today was a REAL slow day at work. Someone
had to be thre "just in case", and as new
man I was bitten. So I took my original R2000
in to try an idea I hade for a while.

The product detector isn't the best design.
It uses a transformer to couple the IF to
the mixer bridge and a set of resistors to
couple the BFO. El stinkero.

I cut the traces and put a minicircuit 1:1,
secondary CT, between T18, removed the BFO
feed resistors and fed the BFO to the center
tap. I replaced the 1N60, (which where far
from matched!) with some old HP hot carrier
diodes (HP2800). The differnce between this
uit and a stock unit was night and day.

Very tedius work. But very worthwhile.

I have both radios complete, I ended up
staying an extra hour to complete this and
a rather plain "improved AM detector".

Before I reported that when I biased the AM
detector diode I experienced some very odd
happenings. I don't know what I did wrong,
but when I re did the experiment, it offered
a slight improvement. The AGC has it's own
detector. Just for grins I tried a hot carrier
and low voltage Shotky (zero bias) diodes.
They both worked but really wasn't enough to
bother with . The diode needs a negative bias
voltage and that is a big hassle.

Even though I have NO plans of ever taking
either R2000 out in the field again, I decided
to go on and add both these mods because they
are very worth the "minor" efforts. And for
this weekend I don't have my fancy synch detector.

Not greasy? What is the cause of that "sheen"? Brylcreem? Crisco? 10W-30?
Or simple poor hygiene?

We've seen your photo Wogie, and you are obviously NOT on familiar terms
with shampoo.

Your hair IS greasy.

Shortwave radio (SWR) is considered anything radio below 30Mhz be it commercial, military, maritime or including amateur (HAM) radio. However, there are amateur radio people above 30Mhz.

SWR listeners can listen broadcast from other countries while Amateur radio operators (HAMS) can TALK to people in other countries. HAMS can have transmitters.

Stephan gave an extremely useful and comprehensive website for receiver performance which I had not come across before:
http://www.sherweng.com/table.html
As a mediumwave DXer, Bob Sherwood ranks the various receiver performances by:
"Sorted by Dynamic Range Narrow Spaced"
which I know to be the MOST important spec in a MW DX receiver.

Very informative and blows the lid on some very expensive receivers that just don't cut the cake.
OTOH the AOR 7030 comes out smelling like roses just off the top of the pick.

thanks for posting that Stephan

MSNBC Analyst Says Cooper Documents Reveal Karl Rove as Source in Plame Case

By E&P Staff

Published: July 01, 2005 11:30 PM ET

NEW YORK Now that Time Inc. has turned over documents to federal court, presumably revealing who its reporter, Matt Cooper, identified as his source in the Valerie Plame/CIA case, speculation runs rampant on the name of that source, and what might happen to him or her. Tonight, on the syndicated McLaughlin Group political talk show, Lawrence O'Donnell, senior MSNBC political analyst, claimed to know that name--and it is, according to him, top White House mastermind Karl Rove.

Here is the transcript of O'Donnell's remarks:

"What we're going to go to now in the next stage, when Matt Cooper's e-mails, within Time Magazine, are handed over to the grand jury, the ultimate revelation, probably within the week of who his source is.

"And I know I'm going to get pulled into the grand jury for saying this but the source of...for Matt Cooper was Karl Rove, and that will be revealed in this document dump that Time magazine's going to do with the grand jury."

Other panelists then joined in discussing whether, if true, this would suggest a perjury rap for Rove, if he told the grand jury he did not leak to Cooper.

Why do you assume I'm a Liberal? Is that a default in your
idiotically simplistic world view? That anyone who doesn't agree with
the fake Conservatives must be a real Liberal?

I got news for you Sweetheart, the world ain't black and white; it's
an infinite number of shades of gray, just like a nice old 8 by 10
glossy.

George Bush eats the crisp flesh of burnt babies and drinks menstrual
blood form their sobbing mothers.

2548. Lightning Strike

Newsgroup: rec.radio.shortwave
Date: 2005-07-02 14:08:36 UTC
From: "Dr. Artaud" <Nosuchthing@notvalid.com>
Message-ID: <Xns9687672F3228ANosuchthingnotvalidc@216.196.97.142>
Source record: 26136

We had a rather bad storm the other day, lightning striking everywhere. As I left work, it hadn't started in that area yet, but I could see it off in the distance. I phoned my son to ask if he could disconnect the long wire antenna from my Yaesu FRG-100, but he said that the area very near my house already had a couple of bad lightning strikes. I told him to stay away from the radio.

When I got home, most of the storm had abated, though as I traveled home I could see massive lightning strikes occurring in areas around me. The storm was accompanied by tremendous downpours, and flash flooding warnings were issued.

The National Weather Service (NWS) screwed up on this one, they didn't even issue the warning until after the storm had wreaked its havoc. Nice work guys, Helen Keller could have done a better job.

I get home, assess the trees in the yard, everything looks normal.
Problem is that there is no power to the neighborhood, a condition that remains unchanged for the next 1 ½ hours. No problem, I can use my handhelds and portable shortwave radios.

My wife arrives home, and as she is walking through the yard, she talks to the neighbor. The neighbor explains that the "wire antenna" in the yard was struck by lightning. I go out into the yard to examine the antenna and find it lying on the ground. I'm convinced that very high winds somehow pulled the antenna down. I picked it up and examined it, and lo and behold, some of the insulation is melted off. As I just installed an arrestor of sorts (it's an old one that I bought on EBay, it appears unused, a ceramic block with 3 terminals, 2 outer ones for the antenna wire, and a center one for the grounding wire) about 3 weeks ago, having had the antenna for a couple of years without it.

The melted insulation extended to the arrestor, and the wire after the arrestor was normal in appearance. I examined the Yaesu, it appeared normal, but there was no power in the house yet, so I couldn't tell if operated ok. Being impatient by nature, I got the correct power cord, took the radio to the car, opened the car hood, and connected directly to the battery. The radio powered up, but didn't receive. It looked like it wanted to receive, when tuning through the frequencies every once in awhile I could hear a local station pounding through, overloading the radio, but even with a makeshift antenna I could not receive anything willfully on shortwave or broadcast AM.

I gave it up as toast, and I called AES in Cleveland, explaining that it was lightning damaged. They said that I could sent it back, but that they would in turn send it to Yaesu for a proper assessment. He explained that

Yaesu would try this and that, and probably end up saying that it was irreparable.

Eventually the power came back on, so I took the radio and began to experiment with it yet again. When I tried it at the car, I used both antenna inputs, but I had forgotten to throw the switch on the back to use the low input impedance connector, so I tried the radio again after throwing the switch, placing the antenna wire in the Low Z connector, turned the radio on, and viola, the radio worked. But why doesn't the High Z terminal work. Since the radio had been exposed to such a large transient, I decided to disassemble it to make sure that nothing else is wrong. When I began to remove the screws to open the case, I noticed that the side was discolored. I didn't remember seeing that before. Oh well, I continued with my screw removal. When I removed the top of the radio, I noticed a small point below the discolored area on the inner unpainted chassis that was about the size of a capital O. With the top off, I could not really see anything wrong with the radio, but was curious why the High Z terminals didn't work. I consulted a schematic, and the only difference between the inputs were the switch and a choke or inductor. I could see the inductor, it appeared normal.

I decided to remove the circuit board and had to pull about 10 wire connectors of various sizes from the board. This is a struggle, as there wasn't always an easy way to start to pull the connector from its socket by using a screw driver to twist and pop the connector out of its locked position. I persevered and finally removed all the wires without damage. I removed the screws securing the board, the antenna connectors, and the power connector. Viola, I removed the board.

Surprise, a large blacked area was found just under the High Z antenna terminal connection to the circuit board. Mostly soot, but some minor damage to the chassis metal was observed as well. I examined the bottom of the board and found that a &#65533; trace that carries the High Z antenna signal to the inductor was neatly vaporized. The board was in excellent condition. The area that the trace occupied was unblemished, just the trace itself was gone. I cleaned the inside of the radio and the circuit board, soldered a wire to replace the trace, and reassembled the radio. Viola, the High Z terminal worked.

The voltage path and its destruction seems to be as follows. The lightning strike was largely shunted to ground by the arrestor, but a surge continued on into the radio. Entering the radio, it jumped to the chassis just under the connector, the surge exited the radio on the side near the front panel close to the headphone jack. It jumped to my metal cased DVD player that was so close to the radio that it just about touched it, ruining that, somehow killed the clock radio that sat atop the DVD player, altered the TV nearby, which still works by no longer works by remote control. The surge entered the power system, and on another floor of the house, killed my cable modem, my wireless router, tripped the circuit breaker that fed the modem and router, blew 2 light bulbs in the house, and tripped 2 GFI receptacles.

Questions:

1. The router and cable modem were on a different circuit from the power for the radio and DVD player. The Radio, the DVD player, and the clock radio were plugged into a spike suppressor strip. My house itself has whole house spike suppression at the power meter. I took the spike suppression strip apart to examine for damage, none was visible. If the surge entered the power system, making it to the lighting panel, why wasn't it shunted to ground by the power strip and the whole house suppression which was only about 3 feet from the panel?

2. Could it have been electromagnetic forces that destroyed the cable modem and router?

3. My equipment was not grounded or bonded. Surprisingly, the items that were destroyed near my Yaesu were items that had internal power supplies, so that a direct connection to the neutral was available. The items that were powered by transformers, including the Yaesu itself, were unaffected. I have a Uniden metal case scanner atop my Yaesu that was plugged in, and off with a mechanical switch (part of the volume control), this radio was unaffected. I also have a speaker system for my DVD and TV in the bedroom, this was also off by a mechanical switch and is transformer fed, this was also unaffected. Though the Cable Modem and Router, as described above, were always on, so is a great deal of other equipment in the house, including my main TV, DVD Player, AV Receiver, and so on. Why the preference for some equipment and not the other?

4. Lastly, how can I have an outdoor antenna and survive a strike without damaging equipment? I know that I should disconnect the wire when before a storm, which I always do, but this day was not supposed to have storms, and I couldn't get to the radio in time. Was the wire more likely to be struck since it had been grounded? Unfortunately, the strike came down my tree in the backyard, obliterating a limb at the top, (a very tall tree), and traveling down the outside, casting off bark as it traveled. The line in the bark comes right to the end of my wire antenna and no lower. Could a "leader" have been initiated by the antenna grounding system that actually led to the strike? The antenna itself was several feet from the tree, tied to the tree trunk with a rubber tube. If the wire had previously been removed from the radio and simply tossed onto the floor, what may have happened with the surge?

Thanks for your comments, and be safe when lightning becomes an issue.

Dr. Artaud

Why not put all the advertising inside ONE posting? It would be a lot more considerate. Some people consider your sale notices as spam, why not reduce the total number of intrusions?. The crossposting of commercial advertising is in bad form too.

You might as well give up trying to figure out lightning's unpredictable ability to damage things. I had a direct hit on my longwire years ago and the antenna was indirectly grounded to the ham transceiver chassis. It still took out the output RF amp but did not damage the receiver at all. The antenna was totally vaporized and what was left of the ceramic insulators had the most beautiful copper plating around the holes! The same strike opened up a buried AC cable that controlled the yard lighting. That never did work correctly again and I was too lazy to dig it up for repair. I'm glad your FRG was not damaged any more than it was. I worked in high voltage physics years ago and it was facinating.

Dr Artaud wrote about his recent lightning strike, sorry for your damage there Dr. I too, took a lightning strike a couple of years ago. Thankfully, because I took some precautions, my radio gear didn't get any damage but I can't say the same for the televisions, the cable modems, phones, etc.

> Questions:
>
> 1. The router and cable modem were on a different circuit from the power

> surge entered the power system, making it to the lighting panel, why
> wasn't it shunted to ground by the power strip and the whole house
> suppression which was only about 3 feet from the panel?

It may not have entered that way. Nearby strikes can induce a current into the power lines running through the house. At a distant point from the lighting panel the induced voltage could have started. As it courses its way through the house wiring looking for a ground point it will work through your appliances, etc. until it finds ground. Meanwhile, it may never make it back to the panel.

> 2. Could it have been electromagnetic forces that destroyed the cable
> modem and router?

Absolutely. Every cable wire, every phone wire, printer cable, etc acts just like an antenna...picks up a voltage and carries it to the device. That nearby strike packs plenty of power to place a huge voltage on a wire. Most of these devices are low voltage and sucuumb to transients easily.

> and so on. Why the preference for some equipment and not the other?

Precisely what I had happen at my strike. The televisions were unplugged, but I neglected to unplug the cable tv channel boxes and when the strike entered via the cable it was all that was necessary to destroy 2 TV's, and 3 cable tv boxes, as well as the cable modem boxes. Oddly, the computers survived although one modem on a laptop could no longer be used. I plugged in a modem card and was able to work around that damage. Sometimes there's no rhyme or reason as to why some pieces of equipment survive while others don't.

You need a SINGLE POINT GROUND SYSTEM, I'm not shouting there..just for emphasis. One and only one common ground system to which all equipment, and the entrance panel ground share. This way, if a voltage makes it onto your system, all points rise and fall at the same potential. It is a potential difference between points that allows current to flow. If all points rise and fall the same...no current flow, no damage supposedly. After my strike (which was strong enough to blow ceramic tiles to dust, and blow a 2 inch deep by 2 inch wide by 6 foot canyon in my concrete housepad under those tiles!) I contacted PolyPhaser and several other lightning companies, was invited to a 3 day lightning damage symposium by Florida Power to learn more and see the various company displays. I learned a lot. The results of which I have put up on a web site showing what I did to install more safeguards to my system. It is at http://www.knology.net/~res0958z/

I'm a bit to excess on this subject, once you've been hit you realize the vulnerabilities. And with a 65 foot tower out back, a mere 15 feet from the house, a bit more sensitive to the possibilities. Good luck with upgrading your system.

2559. Yahoo! radio group "ownership" available

Newsgroup: rec.radio.shortwave
Date: 2005-07-02 15:56:19 UTC
From: Sparky Voltz <sparky_unit_412@yahooEY.com>
Message-ID: <07edc1pisce8v3ffokm0fkoan3t9t7k4u2@4ax.com>
Source record: 26147

Greetings,

I may have posted an invitation of sorts to this group advertising the Yahoo! group "All-Band Radio Renegades and Outlaws". I have chosen to relinquish ownership of that group. The following message was posted to the group, and appears here, since many of those who joined did so from reading my original USENET post.

Below is my original message. I should have done two things differently; one, I am going to send this version as a "Special Notice", since it is of a significant nature in regards to our group, and some of our members have selected to receive special notices only. Also, I should mention that I will NEVER cease my 11 meter and/or CB operation. Too bad if that ticks anyone off, I couldn't care less. As a kid, that pair of walkie talkies I got for Christmas left permanent impressions in my brain which will remain there until it ceases functioning. :) Like all those heterodynes, those southern accents and "handles", the fun of reaching "all the way" to my best friend's house 2 blocks away. I love CB, always have and always will. And, as I stated below, I love my CW. So there ya go.

And, if anyone loses sleep over the fact that I prefer to remain anonymous by using the handle "Sparky", that's your problem. The Internet is full of kooks, nuts, fruitcakes, hackers, stalkers, and other Neanderthals who take immense delight in seeking one's location and identity only to harass, annoy, and/or otherwise make a complete nuisance of themselves. Should anyone care to use their real name, their ham callsign, give their mailing address and telephone number over the Internet, that's your business. Personally, I think it is terribly foolish and highly dangerous. But that's just my opinion. Deal with it.

I am ceasing transmissions on our group's 3, 6, and 13 MHz frequencies immediately. However, 13.555 MHz is allocated by the FCC as a Part 15 frequency and can be used without a license. Part 15 has fairly strict rules regarding power output and antenna limitations. I understand that frequency can be used by any mode of communication. So... I may set up a LEGAL part 15 station of some sort, either CW or SSB, if they are permitted, and attempt operation at some date and time, probably when band conditions are better. Like in 5 or 6 years. :) Otherwise, I shall remain a listener-only, as stated below.

Original message follows:

This group has grown beyond my wildest imagination. I really never expected more than a dozen or so members. However, it seems to be constantly growing, which proves to me that there is interest in this sort of radio operation and activity.

Believe it or not, I have come to the conclusion that I am no longer going to operate on the three HF frequencies we've chosen for our group. The main reason for my change of heart is that I've realized that operating on those frequencies could possibly interfere with our U.S. Military communications. In these seriously dangerous times I simply cannot -- and will not -- put our military personnel in any type of danger or risk. Therefore, I will no longer be transmitting on those frequencies. Secondly, I worked darned hard for my Amateur Radio license, and should I receive the deserved consequences for such illegal radio transmissions, I would most likely lose my Amateur Radio privileges. Frankly, it just ain't worth it. I love my CW way too much. :)

Therefore, I am resigning as "owner" of this group and handing over the reigns to someone else. I am, and will always be, a Shortwave listener who is interested in LISTENING TO the unusual, including pirate broadcasters, "freeband" 2-way radio operations throughout the HF spectrum, and other unordinary and clandestine types of radio operations. I intend on remaining a member of this group, sometimes participating by writing posts and making comments, etc. However, I will no longer promote or endorse illegal radio activity on my own behalf.

If anyone is interested in becoming the "owner" of this group, please email me. I suppose the most fair way of determining who I assign that title will be based on the date the person joined. Sort of a "first come, first served" concept. And should there be a tie, well... I'll toss a coin. One person can be "owner" and the other can be assigned "moderator" status by the new "owner", if that person so desires.

Should I not hear from anyone by Friday July 8, I will simply close the group down for good. It's been fun, friends, and I've enjoyed the banter that's been going on here. I hate to see it end. So, it's up to y'all.

I'll await your request to become the proud, new owner of ABRRAO's. Thank each and every one of you for your joining up, your participation, and your opinions. I do look forward to the continuation of the group.

It's been real...

73 -- ~Sparky~

Frank

Er, dream on!

At best you aren't getting the Inrad fitler back. That fitler is MAGIC!

Thanks for the positive response to my question on "capacitor effect
on sound". That started this whole craze. That and the +95F +70RH
have given me plenty of incentive to stay in where it is cool.

While the simple op amp active detector is clearly not a synch
detector,it is so simple to build and it is so much better then the
stock single diode detector that every one who has a mid quality
receiver ought to at least think about it.

I have disassembled my bread board AD607 synch detector so
I was forced to lsiten to RCI/CBC's Vinyl Cafe' today sans sycnh,
but the active detector made it more then bare able. As I edited it
down for archive I noticed that when the studio switched from the
news to program the was a big jump in 60/120Hz noise. Their little
problem was hidden until I got better equipment. It might be that I
will
have to have a synch detector for weak/noise and use the active
detector for "high" quality SW.

Shortwave radio (SWR) is considered anything radio below 30Mhz be it
commercial, military, maritime or including amateur (HAM) radio.
However,
there are amateur radio people above 30Mhz.

SWR listeners can listen broadcast from other countries while Amateur
radio operators (HAMS) can TALK to people in other countries. HAMS can
have transmitters.

Short Wave Listener (s/ing) is most often called SWL.
And many hams also are SWL.
SWR is also more commonly called HF.

>similar, except for the digital readout.

Having played with a FRG-7 at a shop a few times, the R-1000 is way
better. You just turn the switch. And the digital readout tells you
which MHz you've got. For the FRG-7, you have to tune around until you
get the lock light to come one.

Next, the R-1000 has only one local oscillator that matters. Which drives
the first mixer which then feeds the 45.something MHz (fairly narrow)
"roofing filter" for the first IF. So, no images. (For a reasonably
wide definition of "no"). The minus side is that the actual oscillator
(actually, one of a bank of them, selected from ranges of the 1 MHz
switch) is part of a phase locked loop running at 45-75 MHz so is going
to squiggle around a bit and allow the reciever to pick up adjacent
signals as noise.

I don't know the exact details of the FRG-7, but Barlow-Wadley receivers
usually convert an entire 1 MHz wide block to their first IF and second
IF, which is then tuned with using a VFO to the narrowband third IF,
so there's plenty room for intermod, spurs and such.

Hi

I tend to disagree. The longer you live there, the better known you will get. When these guys go looking for an American to get even with for something that happens in Iraq or to the Muslim world, they will go with the simpliest path in their brain which is the first American they can think of. That well known American. They will already know his routine and it will easy to capture him.

Once these guys get a hold of you, you are pretty much finished. All for what? Good cheap living and fun that might end badly one day. I think it's best to stay in this country for now unless you're going somewhere more safe and cultured.

Even Europe isn't safe for Americans these days. I would be scared all the time all alone in a foreign country. Most people feel they will be protected like they are in America, only to find out the hard way no one's give a shit about your rights outside this country. Stay home for now till things get better politically unless again it's a well cultured country.

Lucky

As I remember some old discussions, there was some sort of
precompensation done to master tapes intended for cutting
vinyl masters, to make up losses in the cutting process
(not the playback), and that a lot of the early CDs just
used the same master as vinyl.

MSNBC Analyst Says 2nd Source Confirms Karl Rove as Plame Leaker

By Greg Mitchell

Published: July 02, 2005 1:00 PM ET

NEW YORK Now that Time Inc. has turned over documents to federal
court, revealing who its reporter, Matt Cooper, identified as his

source in the Valerie Plame/CIA case, speculation runs rampant on the name of that source. Lawrence O'Donnell, senior MSNBC political analyst, now claims that at least two sources have confirmed that the name is--top White House mastermind Karl Rove.

O'Donnell first offered this report Friday night on the syndicated McLaughlin Group political talk show. Today, he went beyond that, writing a brief entry at the Huffington Post blog:

"I revealed in yesterday's taping of the McLaughlin Group that Time magazine's e-mails will reveal that Karl Rove was Matt Cooper's source. I have known this for months but didn't want to say it at a time that would risk me getting dragged into the grand jury.

"McLaughlin is seen in some markets on Friday night, so some websites have picked it up, including Drudge, but I don't expect it to have much impact because McLaughlin is not considered a news show and it will be pre-empted in the big markets on Sunday because of tennis.

"Since I revealed the big scoop, I have had it reconfirmed by yet another highly authoritative source. Too many people know this. It should break wide open this week. I know Newsweek is working on an 'It's Rove!' story and will probably break it tomorrow."

Here is the text of what O'Donnell said on Friday:

"What we're going to go to now in the next stage, when Matt Cooper's e-mails, within Time Magazine, are handed over to the grand jury--the ultimate revelation, probably within the week of who his source is.

"I know I'm going to get pulled into the grand jury for saying this but the source of...for Matt Cooper was Karl Rove, and that will be revealed in this document dump that Time magazine's going to do with the grand jury."

Other McLaughlin Group panelists then joined in discussing whether, if true, this would suggest a perjury rap for Rove, if he told the grand jury he did not leak to Cooper.

Besides his career at a TV journalist, O'Donnell has served as a producer and writer for the series "The West Wing."

According to published reports, Patrick Fitzgerald, the special prosecutor in the case, has interviewed President Bush and Vice President Cheney and called Karl Rove, among others, to testify before the grand jury.

"The breadth of Fitzgerald's inquiry has led to speculation that it has evolved into an investigation of a conspiracy to leak Plame's identity," the Chicago Tribune observed on Friday, "or of an attempt to cover up White House involvement in the leak."

2574. David is a Card Carrying Communist

"Unless it is called to account by people who know what they're talking about, they [Leftists] will pretend to be civil libertarians, they will pretend to be democrats, they will pretend to be for &#65533;peace.&#65533; They will pretend to be humanitarians. But what they really are is America-hating totalitarians who want the enemy to win."

Dishonest debating is a hallmark of the left. They usually open with an ad hominem attack and follow it up with disingenuous prevarications, effete canards and circuitous polemics. Most of their contentions are regurgitated from other sources. (Originality of thought isn't their strong suit.) Their favorite closing tactic is to accuse anyone that disagrees with them of racism. This last technique is meant to stifle any debate whatsoever.

That means the rest of us are operating under a handicap because we tend towards honesty. It's a lot easier to win an argument with sophisms than it is with facts and reason. Being creative with the truth opens up a whole world of specious possibilities. This makes countering even crude attempts at sophistry difficult. Also, as you pointed out, leftists tend to be stolidly resistant to inconvenient facts. Guys like us believe what we see. Lefties see what they believe.

Of course, the left does not live by sophistry alone; it is also heavily dependent on lies. One of the biggest lies of its campaign to support our terrorist enemies and sabotage the cause of freedom in the Middle East is its denial of Iraq's connection to anti-American terror in general and to al-Qaeda in particular. This is especially remarkable considering that one of the firm conclusions of the 9/11 commission was the connection between al-Qaeda and Iraq. Weekly Standard reporter Stephen Hayes has been on top of this story from the beginning and has just compiled the body of evidence behind it:

http://www.weeklystandard.com/Content/Public/Articles/000/000/005/780plthl.asp

It isn&#65533;t often that the Left is forced to reveal itself, but in this transcript of a &#65533;Michael Medved Show&#65533; segment with David Horowitz and Nation writer Daniel Lazare that is exactly what happens in regard to the Left&#65533;s de facto alliance with our terrorist enemies in Iraq and elsewhere. Lazare begins by denying the reality of this "unholy alliance" &#65533; the title of David Horowitz&#65533;s book &#65533; but ends up by professing his support for both the &#65533;insurgents in Fallujah&#65533; and the Soviet invaders of Afghanistan in the 1980s, as well as expressing his view that the terrorists who are fighting us are to be compared to the French Resistance fighting the Nazis during World War II.

...
"...in the Cold War we had a very large Left that supported the Communist enemy, we now have an even larger Left • since that old Communist, •progressive• Left has combined with Muslim radicals to create a much larger fifth column in this country • which wants us to lose this war and the War on Terror generally."
...
"I grew up in the Communist movement. My parents were card-carrying Communists. And so I can speak with authority on this because everybody that I knew growing up was a Communist. They wanted the Soviet Union to win the Cold War, just as the people who have led the demonstrations against the war in Iraq understand that if the United States loses in Iraq the other side will win. Consider the people who have led the demonstrations against the war in Iraq. Leslie Cagan, the head of the coalition United for Peace and Justice, is a lifelong Communist. She's still a member of the Communist Party. She's a head of the •moderate• peace organization, United for Peace and Justice. Cagan is a pro-Castro Communist. The more radical group, International ANSWER • and these are the two groups that have organized all the major demonstrations against the war • is a pro-North Korean, Marxist/Leninist party, which has also defended the Serbian war criminal [Slobodan] Milosevic, and just about every horrific international figure of the last 50 years."

"At the Columbia teach-in against the war, Nicholas DeGenova said right out that we should all wish for the United States to be defeated in Iraq. He wished for •a million Mogadishus.• He was cheered when he said that, because that's really what the Left thinks even though it puts on this false front • which my parents were very good at, too • that it's for peace and justice and so forth. But when you look at their actions, you can see that their actions show quite the opposite. They want America to lose."
...
"The fact is that Osama bin Laden himself, on February 12 of 2003, which is about four weeks before the United States troops entered Iraq, said on Al Jazeera TV, •the interests of Muslims and the interests of the socialists coincide in the war against the crusaders.• But, of course, it's not just words; it's deeds that link American leftists to the Islamic jihad. What were all those people doing out in the streets demonstrating so soon after 9/11 against an American military response to a military attack? And then a million of them • not just demonstrating for •peace• but denouncing George Bush as Hitler, and America as the real •Axis of Evil?• What were Leslie Cagan and Medea Benjamin, two of the most important leaders of the so-called peace movement, doing organizing Iraq Occupation Watch to incite American soldiers to defect, and using a Saddam Hussein supporter to run their organization in Iraq?"
...
"This is the same ruse leftists used to rationalize their support for a Communist victory in Vietnam. Ho Chi Minh • an operative of Stalin•s Comintern who spent most of his life in Paris • was alleged to be the •George Washington of Vietnam.• Here we have a classic example of how the

Left operates."
...
"The idea that we have invaded some innocent country, by the way is absurd. We've been at war with Iraq since 1991, and they violated the terms of the truce that ended that war. That's why we're there."
...
"Iraq invaded two countries: Iran and Kuwait. The truce that ended that war was sealed by UN resolutions, which Saddam then proceeded for ten years to systematically violate. We flew planes over that country daily in order to protect the Kurds from being gassed by Saddam's air force. He was given an ultimatum by the UN Security Council on November 8, 2002, which he didn't meet. That's the legal basis for this war, even though the Left chooses to ignore it."
...
"...there wasn't one demonstration in front of the Iraqi embassy in the entire lead-up to the war that said to Saddam, "Disarm. Obey the UN resolution."
...
"In their hearts, these leftists hate America, and they want any enemy, even if it's as horrible an enemy as Zarqawi, to triumph over us. And they will use all manner of sophistry to excuse and defend their position and say, "Oh yes, we're critical of this and that in terms of what they do. We didn't actually like them blowing up the World Trade Center, because that gave a propaganda victory to the United States, and we don't like Zarqawi beheading people, because that makes it harder for us to sell their cause." But these are minor points for them, that pale beside the fact that America is Nazi Germany. The clear allegiance of leftists like Lazare is with the enemy and against the United States. And this is true of hundreds of thousands of American leftists who get a pass, of course, from our media, because our media is so predisposed to support them."
...
"I think the audience has had a good look at how the American Left dissembles. Unless it is called to account by people who know what they're talking about, they will pretend to be civil libertarians, they will pretend to be democrats, they will pretend to be for "peace." They will pretend to be humanitarians. But what they really are is America-hating totalitarians who want the enemy to win."
...
"...there's a group called International Solidarity Movement, which is holding conferences on American campuses, recruiting college students to go to the Middle East and obstruct Israeli security officials who are trying to protect Palestinians and Israelis from Islamic terrorists. There is the National Lawyers Guild, which was created as a Communist front in the 1930s, and the Center for Constitutional Rights, which provides all the lawyers attacking John Ashcroft over the terrorist detainees in Guantanamo. These groups, along with the ACLU, have organized more than 350 American cities to pass resolutions of non-cooperation with Homeland Security, and particularly, to forbid their police departments from cooperating with immigration authorities. Of course, our borders are our most vulnerable

point in the War on Terror. These people are working for the enemy. And of course, if you think this country is Nazi Germany, the moral position would be to aid our enemies. But there are many Americans many in our listening audience out there who do not believe their country is Hitler s Germany. They need to understand these leftists are their enemies and will help people to kill them."

...

"I have tried to see what's going on in regard to the war in Iraq and the War on Terror, within the framework of the American Left that really got its foothold in America with the Russian Revolution in 1917. And this Left, which developed its institutions and its culture and its organizations during the Cold War and then the Vietnam War, has now gone into high gear with America's War on Terror. And all I ask is that people understand and Daniel has made very clear that these leftists, who supported the Communist enemy in the Cold War, are identifying with the very people we're fighting in the War on Terror. They think that we are we're the bad guys and we need to be defeated."

...

Surge suppressors that use the AC wall outlet for ground are essentially useless against nearby lightning strikes since the distance and relatively small diameter wire conductor (16/18ga) to the main power panel earth ground rod looks like infinite resistance to a large current surge. Relatively smaller spikes on the AC line caused by appliance motors etc... can be shunted, but not a huge current induced by a nearby lightning strike.

There is much good technical information at Polyphasor's web site which will keep you busy with your research for some time.

"Polyphasor"

You might want to spell their name correctly when recommending them.

It is: http://www.polyphaser.com/kommerce_products.aspx

Good products, we use them exclusively where I work, and their products
work superbly. We get a lot of lightning strikes in the Gulf of Mexico
area. They have saved us and the taxpayers many hundred's of thousands
of dollars.

small diameter wire conductor (16/18ga) to the main power panel earth
ground
rod looks like infinite resistance to a large current surge.
Relatively
smaller spikes on the AC line caused by appliance motors etc... can be
shunted, but not a huge current induced by a nearby lightning strike.

There is much good technical information at Polyphasor's web site which
will
keep you busy with your research for some time.

They can and do offer protection to the devices pluged into that
outlet, if said device doens't have any other connection. By clamping
the differential volatage they can really help. Not a cure all, but one
more tool.

From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <42C6F173.5617@mindspring.com>
Source record: 26069

A station my father and I shared came to an end by lightning strike,
when I was no longer interested enough to repair it, just from a nearby
strike, using a tri-bander beam with no particular ground path, just from
general reception of fields, and it was enough to blow out a collins 75a4
and a kw linear final at the end of about 100' of coax, almost all of it
indoors through conduits. That is to say, the antenna was not hit, but
just the rf load was enough to damage things.

I had outgrown ham radio, or whatever happens when you're 17, and moved
on to other things; and my father was more of a swl than a ham at
heart. He just bought another receiver and used its whip antenna.

Well it was interesting at age 12 for a few years anyway. Lightning may
be nature's way of telling you it's time for another hobby.

I would tend to agree that most of the rest of the world hates
Americans, and Muslims especially do. Note that I said *Christian*
Filipinos are usually friendly towards Americans. *Muslim* Filipinos
tend to hate our guts, and they're fighting a guerrilla war against the
Christian govt in Manila. AFAIK it all depends where you are in the
Philippines. I would NOT want to be on Mindanao, which is predominantly
Muslim, for example. And yes, Europeans hate us too, although less so in
places like Poland and Ukraine than in say Germany or France. Thank Bush
for most of this. (Although Muslims hate everybody who isn't just like
them.)

They can be beaten up easily, however, since they tend not to run very
fast. Since we're talking about thugs, they'll likely take the easy
route and just conk him over the head with a pipe.

>
> WHO is killing in Iraq?

Well, Li, neither side has a monopoly on that. We have 500 pound bombs;
they have car bombs.

>
> >
> > > It's time to end the war on Iraq. It should never have been allowed to
> start.
> > >
>
> Yeah, we should let the war come to us.

Actually, yeah, we should. Ever try to fight a terrorist guerrilla
insurgency in an unfriendly country on the other side of the planet? I
guarantee you that if they tried to do in New York what they're doing in
Baghdad that their asses would be in a sling so fast it would make their
heads spin. They'd have to hide out among a Christian population that
hates their guts and be faced with shipping jihadis into the US via
plane instead of across the Syrian desert. There's only so many
skyscrapers that they can fly planes into in America, and not all of
those are as easy a target as the WTC. Ever looked at the skyline of San
Francisco? As for car bombs, I suppose that the rental agencies would
start to get suspicious of lots of young Arab males renting cars that
are never returned. I swear, Americans are such wimps. If we had to
endure a tenth of what the Iraqis have endured we'd be rushing to
mosques begging for mercy. Get some backbone, people! This is war,
buckle down and fight like men or surrender.

2597. Re: Lightning Strike

Newsgroup: rec.radio.shortwave
Date: 2005-07-02 23:35:48 UTC
From: Joe Analssandrini <analssandrinij@yahoo.com>
Message-ID: <1120347348.532246.168820@g14g2000cwa.googlegroups.com>
Source record: 26084

Hello Dr Artaud,

You are very lucky. The damage could have been far worse. Your house could have burned down!

As you have found out, the National Weather Service, while far better than in the past, is not as reliable as we should like.

I personally have my shortwave antenna mounted in my attic so I am somewhat protected from a lightning strike to the antenna itself, but I ALWAYS make it a point to UNPLUG from the AC every piece of electronic equipment I own when I am not actually using it.

It would be wise for you to do the same and, in your case, to disconnect your antenna(s). I know it's a pain, especially with computer routers, cable TV connections, etc., but, as you've found out, surge protectors do not afford 100% protection. I have whole-house surge protection as well as individual surge protectors - sometimes more than one - protecting my electronic components, but there is no substitute for unplugging.

Many years ago my parents lost three televisions to a nearby (50 feet) lightning bolt; none of those TV's were operating at the time, just plugged in.

Since then I have been almost "religious" in my care of my equipment, not so much for the equipment itself, but for the possibility of a fire as a result of a lightning strike entering my house and damaging electronic components.

I must mention that there is absolutely no protection against a "bolt from the blue." (In other words, a lightning bolt while you are actually using your radio, computer, etc., when there was absolutely no warning.) You just have to have luck in that case.

I NEVER use any electronic equipment when there is any weather threat whatsoever (determined by looking out the window - not depending in the NWS). Generally a thunderstorm lasts no more than a half-hour or so. During the storm I don't even use battery-powered radios; their circuits (especially the front end) can be damaged by a nearby lightning strike.

But I hope you'll consider my "mantra:" UNPLUG, UNPLUG, UNPLUG!

Best,

Joe

Countries with a maritime audience, like Greece, will probably still
target their nationals. Likewise Radio Australia and Radio New Zealand
with their widely spread target populations on the islands.

The sprawling campus of America's elite Air Force Academy is silent
for the summer holiday, but the din surrounding its role as an alleged
hot-bed of religious intolerance is only getting louder.

Looks like the American Taliban is in full bloom. Not much difference in crazies anywhere around the globe by the looks of things. Funny how this particular sect has distorted Christianity to the point where it's unrecognizable.

This is another symptom of what you're describing. It's insanity. I found this on a link from your page. A seven year old girl was suspended from a US school because she told a kid he was going to hell for saying "I swear to God"

==========
Go ahead. Suspend 7 year olds for saying "hell", or carrying a pair of nail clippers, or mentioning God at all. Censor Janet Jackson's right breast, and bash anyone over the head, call 'em and enemy combatant and throw them in jail for life if they disagree with anything Bush says!
How did we get here anyway? And is this where we really want to be? The fact that I am addressing this on a British news server says so much about the absurdity of where we are. Hell? Not yet but at this rate, the U.S. is definitely beginning to feel like an embarrassing joke, at the very least!

I think David needs a good, old fashioned, military "Blanket party".
Don't forget to bring the scrub brushes and caustic floor cleaner for
the after party cleanup. I served, and made it home. others didn't,
and this little piece of crap hides behind a computer monitor and calls
the military names. That isn't very smart, is it?

If they were as corrupt as he claims, they would have sent a special
ops team to his home and blown it off the face of the earth.

No, not at the USAF Academy. It will be interesting to see what the
Academy finds in their investigation - when this concern was raised to
public view it was not well received by the top brass. The gist of
their response is that intolerance is what they are training their
cadets to fight against. The fact that it happened is only part of
the issue - how it is dealt with the other.

Hey there,

I'm a newbie who has been having fun with my lil Grundig mini 100 PE, and I looking at SW radios the next step up. Got my eyes on the Kaito KA1102, or the Eton E10/Tecsun PL-550 (mostly because I've been able to examine the Eton hands-on. Looking for something with better reception than my lil mini, good sound. The KA1102 seems to get a hunka good reviews, and has neat features, but no knob. A silly requirement, but I'm still getting used to the idea of digital tuning. (also why I've been considering the grundig s350, good sound, and the knob).

Advise, please. Thanks.

Hi all
my brother lives in France these days (the Vercors region - in the mountains near Grenoble) and misses his UK sport. He can get some of it via the Internet but this isn't quite the same as 'live'. I wondered if there was enough broadcast (eg via the BBC) on Shortwave, and if so what class (eg cost) of SW radio might be required for decent reception in his area. He is not very technical and so is seeking help from me. I am reasonably technical - even have a class 'A' transmitting licence from a few lifetimes ago - but I'm well out of touch with what's available and hope to learn more from being around here.

Any comments received with thanks

Thanks
Jon N

Any good SW receiver such as the Sony 7600 will do, but he will get better reception on satellite or a WorldSpace receiver: http://www.worldspace.com/

See http://qurl.net/ho for reception options in Grenoble. WorldSpace receivers need a small subscription, but the receivers are quite cheap now.

According to their web page, (http://www;.bbc.co.uk/radio5)Radio 5,
which I believe handles most of the sports output of the BBC,
broadcasts on 909 kHz and 693 kHz medium wave. So a good long distance
medium wave radio should do the trick. Is something like the GE
Superradio made in France?

I believe the company which has the right to put out consumer
electronics here in the U.S. under the GE and RCA brands is Thomson of
France.

I've travelled around Europe a lot and reception of R5 Live in the French Alps is only really possible at night. During the day, the ground wave signal starts to get very weak as you travel further away from the English Channel. The Brookmans Park 693 kHz signal is the one to try. If he's a cricket fan, then BBC Radio 4's LW transmission on 198 kHz just might reach.

You may wish to visit http://www.ussliberty.org to find out what a fine "friend" Israel is to the U.S.

They have a book entitled "Assault on the Liberty" you may also be interested in. Chapter Six of that book is available online free of charge at http://ussliberty.org/chapter6.htm and information on ordering the book is available at http://ussliberty.org/jimsbook.htm

What does this have to do with shortwave? 1) The USS Liberty was the most sophisticated surveillance ship of its day and it probably monitored shortwave signals as well as many others -- including the communications of the Israeli surveillance planes which over flew the ship numerous times before the dastardly attack on their "friend" - probably to blame it on the Arabs and force us into the war, on their side, of course. 2) I heard it on shortwave radio as Pastor Peter John Peters, http://scripturesforamerica.org/ , had a guest on who happened to be on that ship which was under attack from gunboats, jets and helicopters, even shooting up the lifeboats and life rafts.

When they survived, against all odds, these guys were ORDERED, by their own commanders, not to ever speak of what happened and some have met with "arkancide" type "accidents" after telling of the crimes the Israelis perpetrated upon that ship that day! The guest of Pastor Peters regularly gets death threats but continues to proclaim the truth - and to remind the president and the people of that infamous day, June 8, 1967.

Check out their URL. Read the free chapter six posted on the web.

Thanks for reading.

Why would you let the ARRL stand in the way of your getting a ham
license? That's a pretty weak excuse, you don't have to have a single
thing to do with the ARRL as a ham.

Re Pastor Peters and "Christian Identity"::

http://www.equip.org/free/DI100.htm

the fact that this was heard on a Christian Identity program should discredit it outright.

Re the Liberty:

MYTH

"During the 1967 War, Israel deliberately attacked the USS Liberty."

FACT

"The Israeli attack on the USS Liberty was a grievous error, largely attributable to the fact that it occurred in the midst of the confusion of a full-scale war in 1967. Ten official United States investigations and three official Israeli inquiries have all conclusively established the attack was a tragic mistake.

On June 8, 1967, the fourth day of the Six-Day War, the Israeli high command received reports that Israeli troops in El Arish were being fired upon from the sea, presumably by an Egyptian vessel, as they had a day before. The United States had announced that it had no naval forces within hundreds of miles of the battle front on the floor of the United Nations a few days earlier; however, the USS Liberty, an American intelligence ship assigned to monitor the fighting, arrived in the area, 14 miles off the Sinai coast, as a result of a series of United States communication failures, whereby messages directing the ship not to approach within 100 miles were not received by the Liberty. The Israelis mistakenly thought this was the ship doing the shelling and war planes and torpedo boats attacked, killing 34 members of the Liberty's crew and wounding 171.

Numerous mistakes were made by both the United States and Israel. For example, the Liberty was first reported - incorrectly, as it turned out - to be cruising at 30 knots (it was later recalculated to be 28 knots). Under Israeli (and U.S.) naval doctrine at the time, a ship proceeding at that speed was presumed to be a warship. The sea was calm and the U.S. Navy Court of Inquiry found that the Liberty's flag was very likely drooped and not discernible; moreover, members of the crew, including the Captain, Commander William McGonagle, testified that the flag was knocked down after the first or second assault."

- You'll drive yourself batty trying to figure out why lightning does what it does.

- Might there have been *two* strikes? The one that hit your antenna & damaged the Hi-Z input, and *another* one that hit the power lines & damaged the other equipment?

- Even if there was only one, that strike on the antenna would have induced some pretty high voltages on the AC line, which could have caused the damage to the other gear.

- Around here you can pretty much assume there will be at least one thunderstorm within 100 miles of Nashville on any given summer day. From about early April through about late September, I leave my antennas disconnected when not in use.

This "Jew in the know" wonders if maybe this thread needs to continue
in a more appropriate forum, such as alt.revisionism or alt.skinheads.

Let's talk about shortwave.

But then again, there are all sorts of conspiracy kooks on shortwave,
and that is one of its endearing qualities. You just have to be careful
about believing it...

Hello all,

I am beginning the process of searching for some land on which to build a home. It will be located in the Pacific Northwest, in a fairly rural area. I expect to indulge myself heavily in my radio hobbies, including ham radio (especially on the HF bands) as well as a fair amount of Short Wave Listening. I would like to solicit advice on how to evaluate a potential location for quality of radio reception.

Aside from the obvious (i.e., a high elevation, away from high voltage power lines, plenty of room for antennas, etc.), are there any other attributes I should consider to ensure the location will be conducive to my radio activities?

I see you leave no option for open trials in a public court. Public servants in a free society shouldn't have to hide everything they do from the tax paying public. having gulags out of your country in order to circumvent your own laws is NOT right or moral.

mike

Yes, the single most important location for outstanding DX on LF, MW and HF
is to site yourself right on the beach.
Much discussion has taken place about the "ideal" DX site and there is
considerable consensus among serious DXer's that DXing on the waters edge at
the beachside gives a major boost to signals.

Good luck in finding the Holy Grail of DX sites

Hey Doug,
I checked out your web site. Fascinating stuff especially the F2 skip
recording from 1938 of the BBC, captured in N.Y. I managed a signal
while in N.C. (near Cherokee) from a station in Kitchener, Ontario back
in the 70's. This is a good time of year for that stuff too.

They are not soldiers, as Iraq doesn't have a legitimate army now
that their old movement is gone. That leaves terrorists or enemy
combatants. Take your pick. We can detain enemy combatants, while a
terrorist places no value on life. Not yours, mine or his. They are
cowards who think they will gain fame and glory by dying while killing
others. They are mentally ill. They do nothing productive for the rest
of the world. They kill people, destroy property and the lives of those
around them at every turn.

They are not citizens of the US so they have no rights on US soil.
They could only be tried for war crimes in the US. If they are freely
released back to Iraq, they will rejoin the fight. What good will that
do?

It IS A VERY GOOD IDEA to keep them elsewhere. They can't escape and
harm our citizens, or rejoin the fight. Or do you prefer the killing to
go on for decades? Do you know anything about how a military HAS to
operate to be effective, and minimize death on both sides of the battle
line? The last thing most soldiers want to do is kill. It affects them
for the rest of their lives and it can even drive some of them to
suicide, even though it was a kill or be killed situation.

Grow up, find a yourself a working set of balls and learn more about
the real world. It can be and quite often it is a deadly place. I
think that we waited too long to start rooting out terrorists. A lot of
people would still be alive if they were found and killed early on.

So what, just because you may not agree with everyone who goes to movies, does that stop you from going to movies? What made you think you had to pay any attention to those "loyal members". What do you care who has the biggest antennas or what brand of radio some other ham uses? I think it is all just a weak excuse about something you didn't want to put any effort into.

No matter how much you and your likes try to decieve and hide it, the truth will come shining through. The reason for the attacks on Liberty was to prevent the US from knowing about the atrocities and war crimes that were committed by the Israelis against the retreating Egyptians in the Sinai.

Patience and Time..... The truth about you and your likes will come out.

You can't just go out and start offing people because some day they
may attack you.

There was ample warning prior to 9-11. Bush chose to ignore it
because he wanted his Pearl Harbor.

Homey. You seem to have sexual identity issues, like a lot of career
military.

Rumsfeld claims many of these ''detainees'' were snatched off the
battlefield but refuses to treat them as prisoners of war. Can't do
that.

From: ARRA [mailto:press@ARRA.COM]
Sent: Friday, July 1, 2005, 4:01 AM
To: All Radio Amateurs [mailto:all@arra.com]
Subject: Important Organizational Announcement

ARRA Founder Glen Baxter cuts a deal with Washington

Belgrade Lks, Maine., July 1, 2005 - In a surprise deal, ARRA Founder K1MAN and FCC legal representatives at Dewey, Cheatum, & Howe, announced today that all charges and NAL pending against K1MAN would be dropped contingent on a merger agreement between ARRA and ARRL. Under the proposed arrangement, ARRL would acquire the American Amateur Radio Association (ARRA), a leading provider of Amateur Information Bulletin Services. The deal would unite the two most prominent Amateur Radio organizations in the United States. Financial terms of the proposed acquisition have not been finalized.

"The acquisition of ARRA complements ARRL's already extensive offerings to include up-to-the-minute information and interactive discussion on what is happening in the world of Amateur Radio," said Jim Haynie, W5JBP, president of ARRL. "Together, we will be more effective in taking on some of the challenges facing Amateur Radio, such as BPL and Spectrum Defense. This brings us one step closer to being the national membership association for Amateur Radio operators."

The acquisition also brings the strong leadership skills of Glenn Baxter, K1MAN, to the ARRL organization. Baxter has been named ARRL Third Vice President in the move. "Mr. Baxter is a welcome addition to our management team here at ARRL," said David Sumner, K1ZZ, and ARRL Chief Executive Officer. "I look forward to his fresh perspectives and enthusiastic approach to running a service organization like the ARRL."

"Water under the bridge," said Glenn Baxter of ARRA about past frictions between the two organizations. "Today marks a new beginning for all of us. We're in this together now." Plans for collocating Mr. Baxter and Mr. Sumner in adjoining offices at ARRL headquarters are currently underway.

In an official statement, Mr. Riley Hollingsworth, K4ZDH, FCC Legal Advisor for Enforcement added, "Over the years, Glenn and I have become very close. I look forward to continuing our professional relationship as he assumes his new position."

In an effort to accelerate the shift to its new on-the-air image, ARRL has already filed the paperwork necessary to make W1MAN the official call sign of the combined organization. Joe Carcia, NJ1Q, ARRL station manager was thrilled with the change, saying, "What a creative way to reflect our

traditional roots while also letting our bold, new face shine through!" Broadcast operations at the facilities of ex-W1AW will be shutdown immediately. ARRA's state-of-the-art studios in Belgrade Lakes, ME will become the new source of all ARRL transmissions.

Amateur Radio insiders applauded the move. "These are interesting times for Amateur Radio," said Gordon West, WB6NOA. "I sense a likely shift in the ARRL views on many areas of the service. I think we'll be feeling the positive impact of this merger for years to come."

"This is big . . . really big," said Joe Walsh, WB6ACU, lead guitar player for the Eagles. It's exactly the kind of thing that will send our ticket sales through the roof. With Glenn on vocals, and Sumner on drums . . . this tour season will be our best since '73"

Audio aficionado and Amateur Radio entrepreneur Bob Heil, K9EID, also supported the move. "This is a good thing for Heil, and it's about time these guys got together", said Mr. Heil. "We are already working on a special commemorative W1MAN microphone to honor the event."

ARRL was founded in May 1914 by Percy Maxim, a leading Hartford, Connecticut, inventor and industrialist. Today ARRL, with approximately 152,000 members, is the largest not-for-profit organization of radio amateurs in the United States.

You really need to sit down and study the Geneva Convention, 'tard boy.

But then again, you're probably much better spouting off someone else's BS.

Continue to tote.

Geneva Convention? WTF?

2664. Independence from the King and from God

Newsgroup: rec.radio.shortwave
Date: 2005-07-03 17:47:28 UTC
From: David <rickets@knac.com>
Message-ID: <449gc1lmetprsr5j8k5oligs0ir9vccsbc@4ax.com>
Source record: 26201

The theory of government presented in the Declaration of Independence, then, represents a radical break with Judeo-Christian traditions that went back thousands of years. Government, it asserts, derives its powers not from the will of God but from the consent of the governed. From being an instrument of God's wrath, government is demoted to an invention of human beings, to be altered at the will of its creators. Our Constitution goes even further than the Declaration in its godlessness, not even bothering with a ceremonial invocation of God or "Divine Providence" in vesting ultimate authority in "We, the people." As James Madison, principal drafter of the Constitution, said, "religion and government will both exist in greater purity, the less they are mixed together" (Letter to Edward Livingston, July 10, 1822; excerpted in Quotations That Support the Separation of State and Church). John Adams, second President of the United States, wrote that "Although the detail of the formation of the American governments is at present little known or regarded either in Europe or in America....[i]t will never be pretended that any persons employed in that service had interviews with the gods, or were in any degree under the influence of Heaven, more than those at work upon ships or houses, or laboring in merchandise or agriculture; it will forever be acknowledged that these governments were contrived merely by the use of reason and the senses" ("A Defense of the Constitutions of Government of the United States of America," 1787-1788; excerpted in Quotations That Support the Separation of State and Church).

This country went on not only to found what is likely the first entirely secular government in human history but also to guarantee religious liberty for all in the Constitution and the Bill of Rights. Article VI of the Constitution, in barring any religious test or oath for federal office, and the First Amendment, in protecting freedom of religion and the separation of church and state which guarantees that freedom, ended the long "Judeo-Christian" tradition of persecution, torture, and death for differences of opinion in matters of religion-a tradition that began with the Bible itself, which calls on the faithful worshippers of God to denounce even their own parents and children and to cast the first stone in putting them to death if they deviate from the "true" religion (Deuteronomy, 13:6-11). That we do not have a government based on the Bible-or "God's law"-or "Judeo-Christian values"-is something that all Americans can be grateful for every Fourth of July: grateful not to any god, but to the human beings who established this country as a free country, and not a Christian nation.

No loss to the world.

I'm amazed he didn't hide in shame after his laughble end of world scenarios with his usual galaxy of jackass guests back at 1/1/2000. I had to do Y2K watch for my company that night and report to the feds all night. So listened to Art Bell with great amusement all night, and the best they could do to cover the fact that their lunacy was exposed? "Well, the REAL millenium is in one year".

Art: Stay in Parumph, run your radio station, play ham radio, don't tell me that I'm the cause of the earth ending because I drive a car as long as you're feeding a Firebird.

Dunno about that. I have a friend with a cabin that is miles away
from any power lines - he uses solar power. Of course, he made up for
the rf-quiet location by using noisy flourescent fixtures - you
guessed it, radio is not his hobby.

I agree with the other poster who suggested taking a radio to do radio
surveys of the area. Even though a place might seem like it should be
RF-quiet that is not necessarily the case.

That's what the guest said they CLAIMED. However, he said slower moving planes flying the star of David studied the ship THIRTEEN times (?) from 06:00 to 12:00, then at 14:00 the ship was attacked by gun boats, helicopters and jets. They INTENDED to leave NO SURVIVORS but somehow the ship would not go down even though it was "thrown together" in about 45 days. Someone radioed, "Help is on the way" and the cowards fled. This ship was protected only by two 50-cal's on the fore and aft of the ship. The USS Saratoga was supposed to protect it but it's jets were 15 minutes away - and were ORDERED to STAND DOWN!

GET THE BOOK! Dispense with the LIES. :-)

Oh, you were right on the ball. What does the ADL pay you to help to stomp out the truth? It took less than an hour for you to "detect" and attempt to "deflect" the truth! :-)

Do "Jews" who benefit so greatly from America's generosity really spit when they hear the words "Jesus Christ"?

I have compact fluorescents in every socket in my house (except in the
stove and refrigerator). They do not make enough noise to raise the
floor. Once in a while you'll get a ''buzzer'' but not very often.

Yes, if you carefully shop and have the newer models. These were put
in over 10 years ago and chosen for economy. Have also found that the
major source of noise is the charge controller he used - getting to a
point of me offering to upgrade his system so I can better enjoy radio
when I visit. The solar stuff works well, and yes flourescents also -
just have to put a little effort into choosing what you use.

Only if you're prone to knee-jerk reactions. It's more than possible, and I'd say very likely that Peters or his agent approached the interviewee and represented Peters as a God-fearing, Bible-thumping Christian pastor who also transmits on SW to spread the word throughout the nations, which of course is just what he is in addition to the other unsavory aspects of his beliefs, which he perhaps felt no need to convey. I'm guessing the interview was over the phone, that the guy had never heard of Peters before, was probably a Christian and took Peters at his word, and would probably crap his pants if he knew just how he'd been used, and I'm not prepared to assume that the guy being interviewed knew just who he was associating with. YMMV.

> Re the Liberty:
>

It -was- a warship. Ours, and clearly indentied as such.

> The sea was calm
> and the U.S. Navy Court of Inquiry found that the Liberty's flag was
> very likely drooped and not discernible; moreover, members of the crew,
> including the Captain, Commander William McGonagle, testified that the
> flag was knocked down after the first or second assault."

The sea was calm, but as your URL was so quick to point out, the Liberty was making 30 knots before the attack...and that would be while the Israeli warplanes were making their initial identification passes over the ship. (Thirteen in total, IIRC, over the course of several hours). -You- figure out the discrepency there.

> for more, see...
>
>
> http://www.jewishvirtuallibrary.org/jsource/myths/mf6.html#j

Oh, by all means everyone should go there.

They should also go to http://www.ussliberty.org and compare notes between the two. The quotes on the first page are great.

Al gave a link to a great URL, and the book is even better; it was written by an officer who was on board the Liberty (and on the bridge) at the time of the attack. We can take the word of author James Ennes and his fellow shipmates who were there, or we can take the word of people who weren't. I'll accept the testimony of American fighting men who were actually at the scene over government representatives/apologists/spin-doctors (from -any-government) any day. I won't take it as gospel, but given the choice....

Oh, and for the record before I forget...I'm in no way anti-semitic, and Pastor Peters and Al Patrick are both still full of shit.

You need to drop by the local building codes office. Your home site will be located in a county or inside a city or town limit. Rules vary from place to place but every place has building codes and inspectors who inspect construction to ensure the codes are enforced.

Code enforcement varies from place to place -- I built houses in West Virginia, southwest Virginia, northeast Tennessee, and southeast Kentucky -- there were some counties where we never saw an inspector and the guy who issued our building permit at the county courthouse could not even read blueprint house plans -- but in other counties they inspected us at every turn.

If you are building in the county -- outside city or town limits -- the county will inspect you. If you are building inside a city or town limit, their inspectors will inspect your construction or they may use the county inspectors, or, your construction may be inspected by both county and town/city.

You need to check with the inspector's office or whichever office issues building permits to see if they enforce codes on towers and antennas. You may find that you can put up any tower, any height, anywhere you want -- or -- you may find that putting up even the simplest antenna support will require engineering drawings, environmental impact statement, and several inspections. Remember, too, if you are in the flight path of an airport, even a local grass strip, you will have height limits and lighting requirements on towers.

Also, you are likely to be wiring your house for a ham station, which means one room or one corner of the house will have several 110VAC outlets plus one or more 220VAC outlets for linear(s). The electrical inspector will find this strange and you need to talk with him BEFORE you even think about building so you get him on board with you -- he will tell you what the codes require so you don't have to rip out any wiring. Don't forget, too, that you will need some way for cables to go out of the house to the antennas -- and anytime you poke a hole in a wall, the inspectors get nosy -- you will need to ensure that the cable egress location has proper sealing, fire blocking, insulation, etc. Also, you'll need to ground the station -- talk to the inspector about that because he may look askance at a #4 copper wire running to a ground rod in addition to the one required at the entrance panel. Remember, too, when you start laying out your floor plan -- if you have water (a sink) within a few feet of the ham station, the outlets may be required to be GFCI protected -- and you don't want GFCI on your ham station outlets because you will forever be tripping the GFCI and shutting off the power -- so locate the ham station away from sinks and faucets.

Bottom line: Find your local building codes office and get to know them LONG before you select a building site.

Mark Zenier

As I remember some old discussions, there was some sort of
precompensation done to master tapes intended for cutting
vinyl masters, to make up losses in the cutting process
(not the playback), and that a lot of the early CDs just
used the same master as vinyl.

Mark Zenier mzen...@eskimo.com Washington State resident

I checked manuals for the old 24 track ampex decks we have at
work and the old the "50Us and 15us" don't match with that EQ.

Was the precompensation made to the master audio as it was
recoreded?

I built a mono 2 stage eq to give the 50uS and 15uS
cuts. It made the Mason Proffit CD sound correct. Odd
things have happened in the audio world.

I will persue this in depth later, too many other things
going on right now.

Thaks for a hint on what may have been going on.

Terry

Why? What do you want to know? They used tubes, coils, capacitors, resistors
and a few other things. Nothing special, except the power supply - that was
great stuff.

Hi Dennis:

I would look into local Zoning laws to make sure someone won't build a
Power line / Station / (etc) next to your home.

Hire an architect . Tell Him /her about what you want in the way of RF
free wiring; Heck, approach an architect / EE instuctor at a local
college & see if designing your RF free house electrical set up is a
possible project for a student....

Do site surveys, with some wide range receiver, looking for noise where
there should be none (Consult radio Astronomers for this ??)

Use a log book for problems / Pluses, then compare locations using a
spread sheet.

If your house is in a rural area, RF Free, it's going to (Probably)
be good for Astronomy as well.. Walking around the Moon with a
telescope is always fun.

In closing, sounds like you have the world on a string; Congratulations
!!

Dan / NYC

Honus,

You are very true to form in this post. However, the man had been on
the program a number of times before, and knew who he was associating
with. He usually gets on Pastor Peters program sometime in June and
preferably around the anniversary of the awful event.

i.e. your last comment in the post; YOU probably are an expert on the
"full of .... " comment but you probably need to look into the mirror. :-)

One huge collective thanks for all those that responded to this thread. I have read all the responses, and I appreciate the time that each of you have taken to respond.

For the time being, I am going to use a white wire antenna draped around the very edge of wall where it meets the ceiling, tucked into the crevice, so that in the future it mat be painted over and lost in the confusion of all the other imperfections of our 100 year old house (believe me, it's old in the poor sense, not the classic "drink with your pinky in the air" sense). That should provide about 45 feet of wire, going, of course, in different directions. Will the orientation of the wire be an issue, or is it, in the Freudian sense, better for the antenna to be longer?

```
*************************
* X *
* *
* *
* *
* *
* *
***** *****
* Window *
******************
```

If by any chance this comes through correctly, the X = the radio. I will start there, go towards the window, and loop back eventually almost to the radio again just above it. The window protrudes over the roof slightly, that is why it is drawn offset.

Any suggestions on why or why not this will work or not would be appreciated.

Thanks again all!

Dr. Artaud

You're still trying!

The gentleman was more than an a guest of Pastor Peter John Peter's radio program. He was AN EYE WITNESS to the carnage. He was there slipping and sliding in the blood of his comrades while the enemy overhead was someone they had never suspected as they'd been reconned over a dozen times that morning by planes wearing the Star of David.

Wonder why Jesus Christ said, BEWARE OF THE leaven of the PHARISEES, WHICH IS HYPOCRISY?

Read Matthew 16 as there is an in depth discussion there. I'm just giving three verses from that chapter. I especially like:

Luke 12:1 In the mean time, when there were gathered together an innumerable multitude of people, insomuch that they trode one upon another, he began to say unto his disciples first of all, Beware ye of the leaven of the Pharisees, which is hypocrisy.

Mt 16:6 Then Jesus said unto them, Take heed and beware of the leaven of the Pharisees and of the Sadducees.

Mt 16:11 How is it that ye do not understand that I spake it not to you concerning bread, that ye should beware of the leaven of the Pharisees and of the Sadducees?

Mt 16:12 Then understood they how that he bade them not beware of the leaven of bread, but of the doctrine of the Pharisees and of the Sadducees.

Mr 8:15 And he charged them, saying, Take heed, beware of the leaven of the Pharisees, and of the leaven of Herod.

BTW, How did you expect to turn the whole article from the "Jews" attempting to sink our most up to date spy ship - and destroy all on board - to the name calling of Pastor Peters? NO! The topic, the subject of the article, is the attempted sinking of the USS Liberty and everyone needs to know the real facts of the matter; you and Honus be damned!

In your drawing, it looks as if the wire will nearly loop around the
entire room. Not a "loop" antenna in the strictest terms, but a random

length wire in all directions. It should favor no particular direction, but you'll have at least a sizeable piece of wire up. It should work okay. If you've a very old house and it happens to have steam radiators you could make a connection to the pipe as well...more metal to collect signal.

Why would I care about the ARRL? I am not a ham and the ARRL is one reason I never bothered with ham radio. I went into broadcast and electronic manufacturing instead. If the people I have kill filed are the best example of ham radio, it can die for all I care. As far as the cemetery, I don't have that many years left so I will kill file whatever reprobate I have to, to enjoy them in peace.

One thing is obvious. You have no manners, and no social skills.

Below is just a portion of the free, online chapter six.

=======

The True Story of Israel's attack
on an American Intelligence Ship

By James M. Ennes, Jr.

Chapter Six

AIR ATTACK

Copyright by James Ennes 1980, 1986, 1995, 2002, 2004, 2005

Imagine all the earthquakes in the world, and all the thunder and
lightnings together in a space of two miles, all going off at once.
--Description by unknown U.S. Army officer of night engagement
when Farragut ran Fort Jackson and St. Philip, April 24, 1862

Searing heat and terrible noise came suddenly from everywhere.
Instinctively I turned sideways, presenting the smallest target to the
heat. Heat came first, and it was heat--not cannon fire--that caused me
to turn away. It was too soon to be aware of rockets or cannon fire.

"We're shooting!" I thought. "Why are we shooting?" The air filled with
hot metal as a geometric pattern of orange flashes opened holes in the
heavy deck plating. An explosion tossed our gunners high into the
air-spinning, broken, like rag dolls.

My first impression--my primitive, protective search for something safe
and familiar that put me emotionally behind the gun--was wrong. We were
not firing at all. We were being pounded with a deadly barrage of
aircraft cannon and rocket fire.

A solid blanket of force threw me against a railing. My arm held me up
while the attacker passed overhead, followed by a loud swoosh, then silence.

O'Connor spotted bright flashes under the wings of the French built jet
in time to dive down a ladder. He was struck in midair, severely wounded
by rocket fragments before he crashed into the deck below.

I seemed to be the only one left standing as the jet disappeared astern
of us. Around me, scattered about carelessly, men squirmed helplessly,
like wounded animals--wide-eyed, terrified, not understanding what had
happened.

The second airplane made a smoky trail in the sky ahead. Unable to move,
we watched them make a sweeping 180-degree turn toward Liberty, ready to

resume the attack. My khaki uniform was bright red now from two dozen rocket fragments buried in my flesh. My left leg, broken above the knee, hung from my hip like a great beanbag.

The taste of blood was strong in my mouth as I tested my good leg. Was I badly hurt? Could I help the men floundering here? Could I help myself. Was it cowardice to leave here?

On one leg, I hopped down the steep ladder, lurched across the open area and fell heavily on the pilothouse deck just as hell's own jackhammers pounded our steel plating for the second time. With incredible noise the aircraft rockets poked eight-inch holes in the ship; like fire-breathing creatures, they groped blindly for the men inside.

Already the pilothouse was littered with helpless and frightened men. Blood flowed, puddled and coagulated everywhere. Men stepped in blood, slipped and fell in it, tracked it about in great crimson footprints. The chemical attack alarm sounded instead of the general alarm. Little matter. Men knew we were under attack and went to their proper places.

Captain McGonagle suddenly appeared in the starboard door of the pilothouse and ordered: "Right full rudder. All engines ahead flank. Send a message to CNO: 'Under attack by unidentified jet aircraft, require immediate assistance.' "

Grateful for an order to execute, confident that only this man could save them, the crew responded with speed and precision born of terror. Never have orders been acknowledged and executed more quickly. These were brave men. These were trained men. But these were also confused and frightened men inexperienced in combat. An order told them that something was being done, made them a part of the effort, gave them something to take the place of the awful fear.

Reacting to habit as much as to duty, and grateful that duty required his quick exit from this terrible place, Lloyd Painter looked for his relief so that he could report to his assigned damage control station below. Finding Lieutenant O'Connor half dead in a limp and bloody heap at the bottom of a ladder, he demanded: "Are you ready to relieve me?"

"No, I'm not ready to relieve you," O'Connor mimicked weakly --aware, even now, of the irony. McGonagle interrupted to free Lloyd of his bridge duty.

I lay next to the chart table, unable to control the blood flow from my body and wondering how much I could lose before I would become unconscious. Blood from my chest wound was collecting in a lump in my side so large that I couldn't lower my arm. My trouser leg revealed a steady flow of fresh blood from the fracture site. Numerous smaller wounds oozed slowly. Next to me lay Seaman George Wilson of Chicago, who had stood part of his lookout watch this morning without binoculars. In spite of a nearly severed thumb, Wilson used his good arm and my web belt to fashion a tourniquet for my leg, effectively slowing the worst bleeding. Someone opened my shirt, ripping off my undershirt for use

somewhere as an emergency bandage. Meanwhile, I wrapped a handkerchief tightly around Wilson's wrist to control the bleeding from his hand. In this strange embrace we received the next airplane.

BLAM! Another barrage of rockets hit the ship. Although the first airplane caused a permanent ringing in my ears and forever robbed me of high-frequency hearing, the attacks seemed no less noisy. Men dropped with each new assault. Lieutenant Toth, still carrying my unsent sighting reports, received a rocket that turned his mortal remains into smoking rubble. Seaman Salvador Payan remained alive with two jagged chunks of metal buried deep within his skull. Ensign David Lucas accepted a rocket fragment in his cerebellum. And still the attacks continued.

In the pilothouse, Quartermaster Floyd Pollard stretched to swing a heavy steel battle plate over the vulnerable glass porthole. A rocket, and with it the porthole, exploded in front of him to transform his face and upper torso into a bloody mess. Painter helped lead him to relative safety near the quartermaster's log table before leaving the bridge to report to his battle station.

On the port side, just below the bridge, fire erupted from two ruptured fifty-five-gallon drums of gasoline. A great flaming river inundated the area and poured down ladders to the main deck below. Lieutenant Commander Armstrong-ever impulsive, ever gutsy, ever committed to the job at hand-bounded toward the fire. "Hit, em! Slug the sons of bitches!" he must have been saying as he fought to reach the quick-release handle that would drop the flaming and still half-full containers into the sea. A lone rocket suddenly dissolved the bones of both of his legs.

Meanwhile, heretofore mysterious Contact X came to life with the first exploding rocket. Quickly poking a periscope above the surface of the water, American submariners watched wave after wave of jet airplanes attacking Liberty. Strict orders prevented any action that might reveal their presence. They could not help us, and they could not break radio silence to send for help. Frustrated and angry, the commanding officer activated a periscope camera that recorded Liberty's trauma on movie film. He could do no more. 1

Dr. Kiepfer, en route to his battle station in the ship's sick bay, stopped to treat a sailor he found bleeding badly from shrapnel wounds in a passageway. A nearby door had not yet been closed, and through the door Kiepfer could see two more wounded men on an exposed weather deck. Cannon and rocket fire exploded everywhere as the men tried weakly to crawl to relative safety.

"Go get those men," Kiepfer yelled to a small group of sailors as he worked to control his patient's bleeding.

"No, sir," "Not me," "I'm not crazy," the frightened men whimpered as they moved away from the doctor.

No matter. Kiepfer would do the job himself. As soon as he could leave his patient, Kiepfer moved across the open deck. Ignoring bullets and rocket fragments, the huge doctor kneeled beside the wounded men, wrapped one long arm around each man's waist, and carried both men to safety in one incredible and perilous trip.

Lieutenant George Golden, Liberty's engineer officer, was in the wardroom with Ensign Lucas when the attack began. A meeting had been planned for Golden, Scott, Lucas and McGonagle to discuss the drill. The captain was still on the bridge, so the meeting would be delayed. Scott was slow to arrive, as today was his twenty-fourth birthday and he was at the ship's store picking out a Polaroid camera to help celebrate the occasion.

Golden was pouring coffee when they heard the first explosion. "Jesus, they dropped the motor whaleboat!" he cried as he abandoned his cup and started toward the boat. Then he heard other explosions and knew even before the alarm sounded that Liberty was under attack.

Reversing his path, he started toward his battle station in the engine room just in time to see Ensign Scott open the door to his stateroom and slide his new camera across the floor before racing to his battle station in Damage Control Central.

A rocket penetrated the engine room to tear Golden from the engine-room ladder. He plunged through darkness, finally crashing onto a steel deck, miraculously unhurt. He could see rockets exploding everywhere, passing just over the heads of his men and threatening vital equipment. "Get down!" he yelled. "Everybody stay low; on your knees!"

Golden knew that the bridge would want maximum power. Already Main Engine Control had an all-engines-ahead-flank bell from the bridge that they could not answer. Flank speed was seventeen knots, but Golden had taken one boiler off the line just ten minutes earlier so that it could cool for repairs. Without that boiler the best speed he could provide was about twelve knots. He immediately put the cooling boiler back on the line and started to bring it up to pressure.

Even with both boilers on the line, the engines were limited by a governor to eighteen knots. For years Golden had carried the governor key in his pocket so that he could find it quickly in just such an emergency as this. He switched the governor off, permitting the ship to reach twenty-one knots.

As machine-gun fire and aircraft rockets battered the ship, the main engine room began to take on the appearance of a fireworks display. Most lighting was knocked out in the first few minutes, leaving flashlights and battle lanterns as the only illumination in the room except for a skylight six decks above. In this relative darkness, men worked on hands and knees, operating valves, checking gauges, starting and stopping equipment, bypassing broken pipes; and all the while above them danced white, yellow, red and green firefly like particles. Some were small. Some were huge and burst into pieces to shower down upon them. All

entered the room with a tremendous roar as they burst through the ship's outer skin.

Golden glanced at the scene above him. It reminded him of meteor showers, except for the noise, or of electric arc welding. Most of his men were here now, having safely descended the ladders through the fireworks to reach their battle stations. Boiler Tender Gene Owens was here and in charge of auxiliary equipment on the deck below Golden. Machinist Mate Chief Richard J. Brooks was here. Brooks was petty officer in charge of the engine room, and he was everywhere.

Golden realized suddenly that far above them, directly in the range of rocket and machine-gun fire, was a hot-water storage tank. Five thousand gallons of near- boiling water lay in that tank, ready to pour down upon them if it was ruptured, and it would surely be ruptured. The drain valve was at the base of the tank, so it would be necessary to send a man up more than three decks to open the valve.

Golden quickly explained to a young sailor what had to be done and sent him on his way, but the frightened man collapsed on the deck grating and refused to move.

Chief Brooks overheard the exchange. "C'mon, you heard the lieutenant. Move!" he cried, jerking the panic-stricken teenager to his feet.

Terror was written on the young man's face. Tears started to flow as his face contorted in a grimace of fear.

With a snarl of contempt, Brooks gave him a shove that sent him sprawling. Then Brooks mounted the ladder leading to the vital drain valve. Two decks above, perhaps fifteen feet up the ladder, a tremendous explosion occurred next to Brooks. In a shower of sparks and fire, he was torn from his place on the ladder and thrown into space to land heavily upon the steel grating below. Brooks was back on his feet before anyone could reach him. Back up the same ladder he headed until he found the valve, opened it and drained the water only moments before the inevitable rocket hit the storage tank to find it newly empty.

In a few minutes, most of the battle lanterns had been struck by rocket fragments or disabled by the impact of nearby explosions. The room was nearly dark. By working on hands and knees, men could remain below the waterline and thus below most of the rocket and gunfire, although they were still vulnerable to an occasional wildly aimed rocket and to the constant shower of hot metal particles from above.

When fresh-air fans sucked choking smoke from the main deck into the engine rooms, Golden ordered the men to cover their faces with rags and to try to find air near the deck. When the smoke became intolerable, he sent a message to the bridge that he would have to evacuate; but just before Golden was to give the evacuation order, McGonagle ordered a course change that carried the smoke away from the fans. Fresh air returned at last to the engine room.

The first airplane had emptied the gun mounts and removed exposed personnel. The second airplane, through extraordinary luck or fantastic marksmanship, disabled nearly every radio antenna on the ship, temporarily preventing our call for help.

Soon the high-performance Mirage fighter bombers that initiated the attack were joined by smaller swept-wing Dassault Mystyre jets, carrying dreaded napalm--jellied gasoline. The Mystyres, slower and more maneuverable than the Mirages, directed rockets and napalm against the bridge and the few remaining topside targets. In a technique probably designed for desert warfare but fiendish against a ship at sea, the Mystyre pilots launched rockets from a distance, then dropped huge silvery metallic napalm canisters as they passed overhead. The jellied slop burst into furious flame on impact, coating everything, then surged through the fresh rocket holes to burn frantically among the men inside.'

I watched Captain McGonagle standing alone on the starboard wing of the bridge as the whole world suddenly caught fire. The deck below him, stanchions around him, even the overhead above him burned. The entire superstructure of the ship burst into a wall of flame from the main deck to the open bridge four levels above. All burned with the peculiar fury of warfare while Old Shep, seemingly impervious to man-made flame and looking strangely like Satan himself, stepped calmly through the fire to order: "Fire, fire, starboard side, oh-three level. Sound the fire alarm."

Fire fighters came on stage as though waiting in the wings for a prearranged signal. Streaming through a rear pilothouse door, they carried axes, crowbars, CO, bottles and hundreds of feet of fire hose. The sound of CO, bottles and fire-hose sprinklers added to the din as the smell of steam overtook the smell of nitrates, smoke and blood. Men screamed, cried, yelled orders and scrambled to duty as the ship struggled to stay alive.

On the forecastle, Gunner's Mate Alexander N. Thompson fought his way relentlessly toward the forward gun mount. Only moments before, Thompson had remarked to me on the bridge: "No sweat, sir. If anything happens I just want to be in a gun mount." Now he was repeatedly driven away by exploding rockets. Weakened, with duty waiting in that small gun tub, he tried again.

His radar disabled, Radarman Charles J. Cocnavitch left his post to man a nearby gun mount. "Stay back!" Captain McGonagle ordered, knowing that the gun would be ineffective and that Cocnavitch would die in a futile attempt to fire. Meanwhile, Lieutenant O'Connor, still lying near the ladder where he had fallen, was robbed of any latent prejudices by huge black Signalman Russell David, who braved fire, blast and bullets to move the limp and barely conscious officer from the bridge to safety in the now-empty combat information center.

The pilothouse became a hopeless sea of wounded men, swollen fire hoses and discarded equipment. Men tripped over equipment, stepped on wounded. In front of the helmsman a football-size glob of napalm burned angrily, adding to the smoke and confusion. Smaller napalm globs burned in other

parts of the room, refusing to be extinguished.

Again I thought of duty. My duty was on this bridge, amid the flame and the shrapnel, driving this ship and fighting to protect her. Already I was weak from loss of blood and from the shock of my wounds. A sailor tripped over me, stepped on Seaman Wilson, and fell on other wounded as he dragged a CO, bottle across the room. I decided that duty did not require that we all lie here and bleed. It may even require that we get out of the way, if we can, so that others may fight. Relinquishing Wilson's tourniquet to Wilson, he released mine. Acutely conscious of my retreat from the heart of battle, I raised an arm toward some sailors huddled nearby. Seaman Kenneth Ecker pulled me to my feet and I resumed my one-legged hopping.

I need a place to plug my wounds, I told myself, a place to find the holes and stop the flow of blood.

I hopped out of the room. Ecker stayed with me, adding to the guilt I felt for leaving the bridge. Bad enough that I should leave, but to take the bridge watch with me! "Go back!" I insisted. Ecker stayed. The ladder leading from the pilothouse was thick with fire hoses. Somewhere beneath the hoses were solid ladder rungs, but my foot could find only slippery fire hoses. With one hand on each railing and with my beanbag catching awkwardly on every obstruction, I hopped clumsily down the ladder. Once I stood aside to let a man pass in the other direction with a C02 bottle. He stopped to stare at me with a startled look, his mouth open. "Hurry!" I said. I reached the level below to find Ecker still with me. "Go back!" I protested again.

Lightheaded from loss of blood, I searched for a place to examine my injuries and to treat my wounds. The search became urgent as I became increasingly dizzy. More airplanes pounded our ship as I discovered that the captain's cabin offered no refuge. Through his door I could see a smoke-filled room with gaping holes opening to the flame outside, and frantic napalm globs eating his carpet.

Around a corner I found the doctor's stateroom. The room was dark, the air free of smoke. His folding bunk was open from a noontime nap, his porthole closed with a steel battle plate. Strangely concerned that I was soiling his sheets with blood, I pulled myself onto his clean bed. My useless left leg hung over the side in a sitting position. Ecker, still nearby, wanting to help but afraid to touch the leg, finally laid it gingerly alongside the other. I thought of the tissue being abused and wondered how close the sharp bone ends were to the artery.

What happens if I cut the artery ? I wondered. Maybe I have already. A thousand questions begged for answers: Did we get our message off? Will they never stop shooting? When will our jets arrive? And who is shooting at us, anyway?

We still had no idea who was attacking. Although the Arab countries largely blamed the United States for their problems and falsely charged

that American carrier-based aircraft had assisted Israel, we knew that the Arab air forces were crippled and probably unable to launch an attack like this one. And to increase the confusion, a ship's officer thought he saw a MIG- 1 5 over Liberty and quickly spread a false report among the crew that we were being attacked by the Soviet Union. Probably no one suspected Israeli forces.

K1MAN is a hero, his website beats the ARRL hands down, the jealous
b*stards.

Hope he is able to get another going soon. He didn't have to sign
away his right to create great websites, did he?

Axiomatic my dear mII but the current Administration can't see that -
or actually, refuses to.

But now we have the mobsters of the Supreme Court taking away private
property rights (making law rather than interpreting and applying it
once again.)

You have to wonder what is next. The Globalists got the idiots in
Congress top pass the so-called "Patriot Act." The erosion of our
rights is accelerating and almost no one notices or even gives a shit.

The BLINDERS are on folks - with somke ridiculous screen issues
like "gay marriage," abortion and the "ten commandments display"
wrangles to distract us from the REAL issues.

I want to marry my pet duck and the ACLU is going to help me!

A few days ago,I read on the internet where lightning zapped a 9 year old girl's mattress and set it on fire in Kansas.There was some metal things on the wall in her bedroom and the lightning was hunting for the metal.It can do the same thing to antenna wire in a room too.

The Kaito has the adantage of SSB reception, albeit in a rudimentary fashion. The Eton has [supposedly] implemented IF shift which can come in quite handy with adjacent frequency crud but does not have SSB; I don't suspect their 'antenna trimmer' is anything more than a small variable capacitor and is probably more flash than function. These days both radios are built in China [and if I'm wrong this thread will suddenly have 27 people chiming in to correct me but offer you no advice :)] so quality is probably a toss-up between the two.

May I suggest you contact Universal Radio by phone, they sell both and perhaps will allow an exchange to the other if you are not satisfied with your selection?

Good Luck

> E10/PL-500. Any thoughts?

I have a KA1102. Great little portable for the price. I have gotten
excellent results pulling in stations off the whip even in a reception-poor
area. The reviewers gave the E10 a pretty good review in the PWBR 2005
edition, but the radio is about twice the price of the KA/DE1102-- there is
an eBay seller that sells the DE1102 (same radio as the KA1102) for less
than $50 US.

Your wrong dude, very wrong and no not what you are talking of.

It "ain't" worth going into here but the true story will come out soon. The Russians were right there watching everything and are now making the facts know.

Our ships were just a few hundred miles away and refused to help.

It's all coming out.

Burr

I believe the Tecsun PL-350 also has a tuning knob, and it has gotten
good reviews on this newsgroup. It doesn't have an Eton equivalent,
however, so you'll have to buy it off ebay. The version sold on ebay is
labeled in Chinese, which can be a little disconcerting, but it comes
with an English manual and you could always use a labeler to stick
English labels on your most used buttons. The SSB function on the
Degen/Kaito radios seems to me to be more flash than substance. I have
an 1102 and agree that it's excellent, but for somebody used to a tuning
knob the slew buttons can make operation tedious. I hardly ever use them
however since I just use it for casual listening not DXing. I just enter
the freq directly.

I don't know how long you've been here, but us old timers know that Al
will believe ANYTHING that "Pastor" Peters tells him. Peters could
declare that the world is flat, and Al would log on here and present 20
different forms of proof that the earth is flat. Al is very gullible,
and it's funny for a while until it gets boring. Then you just killfile
him. Peters is one of the least enjoyable kooks on SW, anyway. The
constant Jew bashing gets old quickly. Alex Jones is much funnier.

Of course not! Those wascally Jews in America would have done Something Really Really Bad if that happened! What they would have done is still a mystery to the Bright White Warriors, but they would have done *something*. (Creative thinking is not a noted attribute of BWWs. The Jews stole their ability to do so, took the file right out of their brains just like the Syndicate took away Mulder's memory of UFOs in The X-Files. Unfortunately in the case of the BWWs, doing so created a black hole effect, and all their ability to reason and have any form of independent thought went down the rabbit hole.)

Remember the old joke about 3 Jews on a desert island? By the time
they're rescued, they've formed 8 political parties.

I'm more worried about the Jewish Defense League than the ADL. Kahane's
guys are NUTS. So are the Lubavitchers, but the Lubavitchers don't kill
people.

Yeah, Khazars or whatever. Don't forget, the Khazars were a Turkic
people, and Turks are Caucasian. So are Iranians.
>
> Time to get some fresh tinfoil for your hat.

HF waves can penetrate tinfoil. That's Al's big problem-he picks up
whatever Peters broadcasts, and automatically believes it.

#26 David: ""Rumsfeld claims many of these ''detainees'' were snatched off the battlefield but refuses to treat them as prisoners of war. Can't do that. ""

All depends on whether they were in military uniform or not. Anyone in combat on the battlefield who is dressed as civilian, or not otherwise clearly displaying his side by recognizable military insignia, has forfeited all his international rights, and is a criminal according to international law.

It was all their loyal members who put me off amateur radio. I quickly tired of their bickering, and pissing contests over who spent the most on their station, who had the biggest antenna farm, and which brand of radio was the only one fit to be used on the air. I wanted to design and build high end receivers in the microwave range, then I got drafted and never considered a ticket again. I was awarded broadcast engineer as a civilian acquired skill while in basic training, and had enough hours keeping multiple transmitters on the air, along with two studios. Amateur radio had lost its appeal for me. I am still interested in receivers, but I don't have much time to work on them, and the hurricanes last year destroyed most of my test equipment. So, I'll have to see if I can afford to replace the equipment, repair the benches and put a new roof on the shop before I can do any serious work again. I am 100% disabled and can't climb a ladder, so I'll have to wait till i can afford to hire someone to do it for me.

Hopefully it won't see it as seductive as an outdoor wire antenna (with a lightning arrestor) that terminates just below a massive tree. I still remember reading stories at the National Weather Service web site about lightning safety. A woman, sitting in he kitchen, talking on a cordless phone was struck in the side of the head by a lightning bolt. She survived, but when the call for help was first placed, the police and medics thought the call suspicious, since she wasn't on a corded phone. Basically, while in most residential homes during lightning storms, you are never absolutely safe.

let's get one thing straight--THERE ARE CONSPIRACIES!

watergate, clinton-gate, enron, martha-stewart-gate, etc, are just poor examples of stupid people getting caught--not all are that stupid and get caught--for the older crowd--remember Jimmy Hoffa?, he didn't really just decide to disappear you know--lots of people can die when conspiracies are in danger of being disclosed, leaving us with unexplained mysteries

only fools would not realize conspiracies pay off big-time, and successful criminals are pulling it off all the time, the smart ones are never caught, or those with sufficient brains and/or political power

That is correct, that is what concerned me, that fact that it will have orientation in all directions. The radio works quite well with the 15 ft. stub that remains of the original antenna, it has been cut off outside the window.

I would like to return to the outdoor wire antenna, but only after I can ground my equipment properly. I also need to redo the ground rod and connections, and purchase an arrestor that may be more successful in shedding the voltage of the strike/near strike successfully. I will also run the antenna on the other side of the yard, and terminate it well short of the tree, as the strike rode down the outside of the tree to the wire.

I still don't know if it was a coincidence that I just put the arrestor on the wire 3 weeks ago, and that it may have saved my house, or if the presence of the arrestor is responsible for a "leader" climbing the tree and connecting with the bolt of lightning, encouraging it to the arrestor's ground.

there is one device which can be used on, at least, a receiving
antenna with possibly the best protection which can be had, it is
called a "coherer"

google with coherer and "lightning protection" (yes, include the
quotes) and you will see it has been deployed as such

however, using it with a transmitter would probably NOT work, since
the xmit signal would "set" the coherer and cause a direct short to
ground

a homemade coherer can be made with a couple of electrodes, metal
filings and a plastic or glass tube and stoppers at the ends for the
electrodes to enter through and both be within the medium of the metal
filings, again, a web search should provide you with a visual diagram
to construct one with

David has the very good idea of reflecting on the origins of U.S. Independence on this July 4th.

Here is w little of chapter 20 of "Faith & Freedom" by Benjamin Hart.

This passage concerns the French Revolution which took place right after the American.

Btw, the whole book is published online for all to read at:

http://www.leaderu.com/orgs/cdf/ff/index.html#

"""Another major enterprise of liberal historians has been to recast the American Revolution in the image of the French Revolution. The tendency of Thomas Jefferson and Benjamin Franklin toward deism is often cited as evidence of America's trend toward "enlightened rational humanism" during the period of America's founding. Whatever still remained of the Christian faith in America was merely a fading remnant - or so we are told.

It is very instructive, therefore, to turn for a moment to the revolution in France, whose announced aim was to duplicate the American Revolution, which had been such an obvious success. In fact, Thomas Jefferson traveled to Paris in order to assist Lafayette and his associates to draft their own Declaration of Rights. "Everyone here is trying their hands at forming a declaration of rights," Jefferson wrote in a letter to Madison, and included in his correspondence several drafts. "As you will see," Jefferson observed, "it contains the essential principles of ours accommodated as much as could be to the actual state of things here." Article Four of the French Declaration of the
Rights of Man, drafted in August of 1789, for example, states that "liberty consists in the ability to do whatever does not harm another." France's Declaration abolished slavery, titles of nobility, and the remnants of feudalism and serfdom. In many respects, the French Declaration appeared superior to Jefferson's Declaration of Independence. But whereas the American Revolution ended in the establishment of a constitutional democracy, a government under law, the French Revolution ended in tyranny and government by the guillotine, followed by the rise of Napoleon. The ob vious question is: What went wrong in France?

The French Declaration did not acknowledge that the source of man's rights is man's "Creator," as Jefferson had affirmed in America's Declaration of Independence. The French Declaration did not even state that rights are inherent, in-alienable, or derived from any

transcendent authority. Rights for the Frenchman were granted by an "enlightened" government. Tocqueville noted the striking contrast when he explained to his countiymen a half century later that America's experiment in liberty was firmly rooted in the fact that "in the United States the sovereign authority is religious." The French Revolution was explicitly anti-religious, and could not replicate the American example on a secular humanist foundation. Moreover, the prevailing sentiment in the American colonies was to preserve liberties they already enjoyed, to prevent the British monarchy from taking over their churches and subverting their colonial ways of life. But the driving force behind the French Revolution was a fanatical determination to tear down established ways and institutions, which the disciples of Rousseau saw as responsible for corrupting human nature.

Rousseau did not believe in original sin or private property. He hated European civilization precisely because he saw it as a product of Christianity. Rousseau stated flatly that "our souls are corrupted in proportion to the advance of arts and sciences. His society rejected all forms of Christianity, and put in its place the gospel of the "General Will." Against it no individual rights would stand, because, in Rousseau's view, the protection of individual rights stood in opposition to the sovereignty of the people. Following Rousseau's doctrines, the French executed their king, even after he had accepted their constitution.1 From here, conditions rapidly degenerated into anarchy, with the outbreak of internal ideological war and, in the words of historian Henry May, the subsequent "executions of deviants, the lukewarm and the suspect," culminating in the Reign of Terror presided over by Robespierre. In just two years 20,000 people-considered allies of the Old Regime-were executed. France's complete break with the past and with Christianity was symbolized by the introduction of a new calendar that took 1792 as the year One, the first year of the Republic.

The revolution finally turned against itself and began to devour its own. Robespierre denounced the Encyclopedists, even though they were a symbol of Enlightenment thinking, for their compromises with the monarchy. Robespierre was himself guillotined in the summer of 1794. The French Revolution was a grim example of how people behave when they are unchecked by a sense of religious obligation.

Paine failed to make a distinction between the revolution in America and the one in France. He was a political agitator and ideologue, pure and simple, and was not disposed to looking closely at the facts. Paine traveled to France to help topple the monarchy there, and published The Rights of Man. Paine's behavior in France was rebuked by John Quincy Adams, who challenged Paine's latest political tract designed to throw fuel on the flames of the French Revolution. Adams objected principally to Paine's main premise that "whatever a whole nation chooses to do, it has the right to do," echoing Rousseau. Adams replied: "Nations, no less than individuals, are subject to the eternal and immutable laws ofjustice and morality." Paine's "doctrine," said Adams, "annihilated

the security of every man for his inalienable rights, and would lead in practice to a hideous despotism, concealed under the party-colored garments of democracy."

[Thomas] Paine, Adams pointed out, had missed the entire point of the American Revolution, which was the assertion of rights that cannot be deprived from an individual even by a majority. Adams rejected Paine's contention that the people of Great Britain should follow the example of France and "topple down headlong" their present government on the grounds that the Anglican Church did not allow religious freedom: "Happy, thrice happy the people of America!" said Adams, "whose principles of religious liberty did not result from an indiscriminate contempt of all religion whatever, and whose equal representation in their legislative councils was founded upon equality really existing among them, and not among the metaphysical speculations of fanciful politicians, vainly contending against the unalterable course of events, and the established order of nature [emphasis added]."

Thomas Paine eventually learned through personal experience that the revolution in France was radically different from the one in America. He was jailed by Robespierre for protesting the execution of the King and having qualms about the direction of events. It took the intervention of Thomas Jefferson to rescue Paine from the guillotine. Prior to this, Paine had spent much of his political life crusading against Christianity, again failing to make distinctions between the true Christianity of Scripture and the often corrupt version taught by religious establishments.

It is easy to see how a demagogue such as Paine could be attracted to the cause of an extremist like Robespierre. But his experience in France seems to have altered his thinking. He began to see how the philosophy of atheism plays itself out in actual politics. His final work, The Age of Reason (1794-96), although very critical of Christian institutions, indicates something of a change of heart. He had become a defender of reHgious faith against atheism: "Lest in the general wreck of superstition, of false systems of government, and false theology, we lost sight of morality, of humanity, and of the theology that is true." On his deathbed he went still another step, embraced faith, and retracted any and all attacks against Christianity in The Age of Reason: "I would give worlds, if I had them, if The Age of Reason had never been published. O Lord, help me! Christ, help me! Stay with me! It is hell to be left alone." Paine, as vocal a debunker of Christianity as there was in the colonies, died believing passionately in God and hoping for a future life. He had learned the hard way the lessons of the French Revolution."""

Absolute, utter bullshit brought to the same people who gave us the Lady
Hope story that Darwin renounced all of his works on his deathbed.. I'm an
atheist. Paine wasn't.

http://tinyurl.com/9lxjr

I'll not even bother with the rest of that load of crap including the
misrepresentation of Paine's political views, other than to note that it was
James Monroe who secured Paine's release from prison, not Thomas Jefferson.
(Talk about trying to revise history!)

Paine and Jefferson, by the way, were good friends. Which ought to tell you
something.

YMMV.
> >
>
> Honus,
>
> You are very true to form in this post.

In other words I clearly stated my opinion as such. I was speculating, and I
said so. I gave the guy the benefit of the doubt. Where I wasn't
speculating, well...I made that clear as well. You and Peters are so full of
shit you both must have brown eyes, regardless of their original color.
Dull, vacant and listless brown eyes.

> However, the man had been on
> the program a number of times before, and knew who he was associating

> with. He usually gets on Pastor Peters program sometime in June and
> preferably around the anniversary of the awful event.

Well then, the guy isn't doing the cause much good and I stand corrected.
For the most part I must agree with seigezunt when he says "the fact that th
is was heard on a Christian Identity program should discredit it outright."
I was willing to assume for the interviewee's sake that he didn't know what
he'd gotten himself into; I was wrong. If he's a Peters fan, then he's got
brown eyes as well. Regardless, I urge people to not dismiss this particular
story just because it's being examined by Peters, or because you posted the
URL, both of which are damning indictments of the veracity of any story. As
a matter of fact, believing in the truth of James Ennes' account as I do,
I'd appreciate if you'd shut up about it. Your endorsement of it is doing
more harm than good.

> i.e. your last comment in the post; YOU probably are an expert on the

:-)

Fuck yourself, Al.

2749. 'Camp Anaconda' is near the Balad Relay Station in Iraq

Newsgroup: rec.radio.shortwave
Date: 2005-07-04 07:22:51 UTC
From: Max Power <mikehack@u.washington.edu>
Message-ID: <daaqlvace1@gnus01.u.washington.edu>

'Camp Anaconda' is near the Balad Relay Station in Iraq...

Why is this observation now important?
Balad has 16 x 500 kw SW transmitters and an indeterminate number of transmission antennas.
It may have been designed to target Iran, as well as the rest of the Arab-Islamic world.

The recent elections in Iran seem to have put a possible US Hostage Crisis 'hanger on' into power, as at this time there is no concrete proof the new leader was involved. Yet, there is adequate evidence that the new leader may have been in the background the Hostage Crisis.

Iraq has at least 20 x 500 kw transmitters.
Its transmission capacity to Iran cannot be determined at this time, as the schematics of Balad remain secretly hidden in Switzerland. Balad was a 'turnkey' subcontract to ABB, now Tomson-CSF newly named Thales.

Balad has a rotatable SW antenna, suitable (?) for triplexing transmissions to Iran.

I just checked it myself. Apparently, this manual has been removed from the website. Strange.....I downloaded this 11.5MB file back in the middle of May. I stand corrected. Please accept my apology.

Pete

After rectification of the the line voltage, two parallel resonance filters
are employed in the positive supply line and the ground line respectively.

Take a look at

http://www.loddeklatten.dk/radio/schem/tanksupply.htm

I have put some more information there. One of these days I will upload the
original schematics.

but the coherer is an excellent device to use for such an application

best thing is anyone with a file, some metal, a couple wires and a
plastic medicine bottle should be able to construct a homebrew one and
have some lightning protection

you know the idiot michael a. terrell (the real one, the real idiot)
would never be able to come up with that

i would expect MOV's could be used with at least some success in
lightning protection

a homemade would probable be as effective, possibly more

I was stationed at (now closed) Clark Air Base in 1973-74, loved my time there, would love to go back. Even under Marcos-era martial law it was a pretty good place to be, but even then there were problems between Muslims and Christians; I stayed mainly on Luzon so I didn't see any conflicts personally and felt safe as long as I obeyed the overnight curfew.

Things are different there now, both for good and for bad. From what I've read, Americans are still welcome and safe on most of Luzon, less so on the southern islands. A dollar probably doesn't go as far there as it used to, but it's still a better bargain than some other places in the Far East. Technolgy manufacturing and programming have discovered the country, and I would imagine that means more prosperity ... at least in the urban areas. I'm not sure I'd want to live there full-time, but

I think I could really enjoy spending a few weeks or months visiting
that country again.

For those who'd like to find out for themselves Pastor Peters is on the web at http://www.scripturesforamerica.org

His radio log is pretty extensive, including 24/7 on Telstar 5, 24/2 on WWCR on the weekends and multiple times and places on the dial for WWCR shortwave all during the week. He also has live streaming on his web site and the Sunday church services are also live streamed (audio and video) and on Telstar 5 (audio only).

There are some on this group who will pooh pooh anyone who uplifts Jesus Christ. They appear to get their approval / disapproval of any programming from the ADL.

IF the Bible is correct the descendants of Abraham, Issac and Jacob/Israel are supposed to be a MULTITUDE OF NATIONS with people as innumerable as the stars in the sky and the sands of the sea. People who wish us to believe that a few million Christ-hating folks in the middle east in a place about the size of New Jersey don't want you to know about God's promises to Abraham and his descendants. :-)

2771. Pastor Peters on now - 12:00 EDT / 16:00 UTC

Newsgroup: rec.radio.shortwave
Date: 2005-07-04 16:12:02 UTC
From: Al Patrick <arp@_NOSPAM_inet4u.com>

Source record: 26408

Pastor Peters can be heard right now on 12.160 MHz. It's 12:00 EDT / 16:00 UTC.

He will also be on 5.070 MHz from 10:00-12:00 PM | 22:00 - 24:00 EDT / 02:00 - 04:00 UTC. The second hour will be a repeat of the current broadcast. The first hour will likely be a live broadcast with a live question and answer / comment period for about the last 20 minutes.

The above first hour will repeat on 5.070 MHz at 04:00 EDT / 08:00 UTC.

All these can be heard via live streaming at http://www.scripturesforamerica.org or on Telstar 5.

Check it out for yourself rather than believe what the r.r.s. God haters have to say! :-)

Interesting. I comment that it was on ABC in Chicago for a number of hours and you respond with 2 hours of highlights. DISNEY sanitized highlights.

Referring to a post of this past week, I understand why so many people come to this group, participate for a while, and then leave.

Your protestations notwithstanding, the show WAS available widely throughout this country through multiple sources, whether domestically originated or not, it WAS widely available. Perhaps not on SW. But then the pictures on SW are so poor these days. :)

One colleague told me he found it on PBS, though. No Disney there.

(I don't remember whether is was on Usenet, or the group that used to
meet on Saturdays down at the radio store. One of the regulars had been
a recording engineer at A&M. Just stuff I sort of remember, so take it
for what it's worth).

Anyway, there was a real master and then they made a cutting master with
the highs a bit peaked. And the record company production people were
lazy and just shipped out the same tape when they cut a vinyl master or
to digitize a master CD.

"Real scientists hold a very broad outlook of the universe, and will not deny the unlimited 'unknown' with an individual's limited notions. As a blind man has no idea of colors, so we have no idea of the manner that which an all-wise God perceives and understands all things."

> http://www.infidels.org "Metaphysical Naturalism"

The Communist Party is atheist. It "believes" that "It" and only "It" is supreme. The Communist Party "believes" "It" and only "It" has the authority to control and manipulate the Universe, I.E. "Metaphysical Naturalism"

The human "belief" that there is no greater "Being" than himself is an affirmation of the "belief" that humans are "The" supreme Universal being. This "belief" in and of itself is a pseudo-religion without supreme guidance. Without belief in a superior being it constructs and manipulates socially acceptable human behavior which ultimately decends into dictatorial rule without moral and ethical guidance and without threat or fear.

This Metaphysical Naturalism belief is incorporated within Communist Party doctrine.

Woman Raped on Street While People Pass By

About 10 p.m. on April 27, a young woman was raped on the street near a construction company in the south of Baofeng, Henan province. The woman continued to fight with the rapist and shouted for help but nobody offered.

On June 20 China's Legal TV Broadcast reported a "young woman raped on the street while pedestrians stand by with folded arms." They described the rape case in detail.

At 10:15 p.m. on April 27, police on duty at Chengguan police station, Baofeng county of Henan province, received a call reporting a rape case and then they rushed to the scene. They found a man raping a naked young woman.

According to the police, the woman never stopped struggling and calling for help, and several pedestrians passed by but nobody tried to stop the criminal. But when the police captured the crime suspect, a large crowd gathered around to watch.

The female victim claimed that the rapist pulled her to the ground with a knife at her throat and forcefully took off her clothes. The rapist assaulted and abused his victim for about half an hour that evening. He cut the young lady with his knife at some point in the struggle; bloodstains

were visible at the site the next day.

In the interrogation, the crime suspect confessed and told the police that some pedestrians were passing by but nobody stopped him during his half-hour of criminal activity. A tragedy could have been avoided, but was allowed to go on because people are indifferent and numb to public acts of violence.

2782. All Revolutions are Not Created Equal

Newsgroup: rec.radio.shortwave
Date: 2005-07-04 18:13:43 UTC
From: Tai Ping Yang <LiChangchun@gov.ccp.cn>
Message-ID: <11civ4at5iria4b@corp.supernews.com>
Source record: 26416

There are revolutions, and then there are revolutions.

Revolution is an American's heritage. We had a revolution in the 13 colonies in 1776, and the nation was born with the Declaration of Independence on July 4.

This founding document of our young nation, though, was actually not a call to revolution or rebellion. Check the text, and you won't find "revolution/revolt" or "rebellion/rebel" anywhere.

It was a noble call to uphold the "Laws of Nature and of Nature's God"—a call to respect the highest traditions and principles of humanity, not to destroy them.

The Declaration sought to throw off the bonds of tyranny from an overseas power that "excited domestic Insurrection among us." It listed in detail the many outrageous offenses committed by the British crown against people who, by and large, wanted to remain loyal subjects.

It was a reluctant revolution that was fought vigorously once the decision was made, yet the Declaration graciously referred to the crown as "Enemies in War, in Peace, Friends."

The Declaration did not declare war, but actually "Separation" under the guidance of "Prudence." The authors sought to preserve dignity, honor, justice, and ultimately peace—not to create ongoing strife.

In stark contrast, the instigators of the various communist revolutions of the 20th century sought precisely to create a state of ongoing strife among "classes." A particular class would be selected as the "enemy of the people" because that class—the Kulaks, the small landowners, the intellectuals, above all the bourgeoisie—might potentially threaten the stranglehold on power of the actual ruling class at the top of the communist hierarchy. The notion that many in the West have that communism creates a classless, share-and-share-alike society is a bitter joke played on millions of peasants and workers who can only dream of the opulent, privileged lives of the politburo members and their families.

The revolutions that brought the Bolsheviks in Russia and the Chinese Communist Party to power were built on treachery and subterfuge. They cited the Communist Manifesto, a piece of grandiose theorizing that was imported from 19th century Germany, a piece calling for destruction, violence, and strife among people. This declaration was against all traditions and all belief in the "Laws of Nature and of Nature's God." It sought to create an atheistic and egalitarian utopia—of course, some in the Party were "more equal than others," to borrow a phrase from George Orwell's "Animal Farm."

In China, the periodic calls to revolution have been cynical attempts to manipulate popular sentiment with the goal of keeping the communists in power. The communist fear of losing their illegitimately gained power has kept them continually scheming to portray domestic groups as being against the party (sounds suspiciously just like the "domestic Insurrection" that the American revolution sought to shake off) or fan flames of nationalism and hatred against foreign enemies, real or imagined. All these are designed to distract the people from how bad a job the CCP has done at managing and building the nation.

The Cultural Revolution of 1966-76 was the most vivid example of violence, killing, destruction of families and careers, and annihilation of all that was considered good and traditional from China's 5000 years of history. Priceless works of art and ancient scriptures were hacked up or burned, Taoist and Buddhist monks and nuns and countless intellectuals were stripped of their positions and banished to remote regions, and millions everywhere were killed on pretext or for no reason at all.

In America, we hold our founding documents, the Declaration of Independence and the Constitution, to be above any person or party. In China, the opposite is true. The constitution is a frequently changing document that is always subordinate to the wishes of the CCP.

The so-called Revolutionary War in the U.S. was fought to raise people back to the best of traditions. It has led to peace and prosperity in the land.

The communist revolutions brought people in dozens of countries down under a dark cloud of systemic violence, strife, and impoverishment. Some, such as those in Eastern Europe, now see a brighter future post-revolution. Others, particularly peasants, laborers, and people of traditional belief in China, still suffer under the oppressive pall of continual revolution.

This 4th of July in the U.S., let us thank those signers of the Declaration, those reluctant revolutionaries, for their fight for traditions, belief in God and nature, and peace. Let's also remember those who suffer under the darkness of destructive, godless, rapacious, and perpetually violent revolution in the remaining countries that call themselves communist.

For more on the tragic history of communism, please see "Nine Commentaries on the Communist Party" by The Epoch Times.

Hi Dave

I have that guy on permament ignore but once in a while I read one of his responses in a reply to him. Don't bother with him. He's a fat slob faggot who wakes up, rolls over to his Drake, puts on his "cap" like a little

faggot and starts his day. That's it. That's his life. If you think anything intelligent will come out of his brain forget about it. He's a useless person. He knows a little about radios and that it. But many here know much more then him so he's expendable as to that regard.

Don't waste one single drop of energy on him. He's not worth the dignity of a reply from you nor can he comprehend it anyway. This NG and *world is a BETTER place without seeing his posts.

Lucky

2786. Africa on Shortwave

Newsgroup: rec.radio.shortwave
Date: 2005-07-04 18:33:03 UTC
From: dxAce <dxace@milestones.com>
Message-ID: <42C980DF.CD64FC4D@milestones.com>
Source record: 26421

Updated Africa on Shortwave surveys, compiled by Tony Rogers of the British DX Club, are now available on the BDXC-UK web site. Tony has updated both surveys as of July 2005. As usual there are two versions available:

1) Country order - this comprehensive list covers all known domestic and external short wave broadcasts from Africa as well as selected opposition/target broadcasts aimed at African countries.

2) Frequency order - this lists domestic stations in sub-Saharan Africa as well as most opposition/target broadcasts aimed at Africa. It also includes international broadcasts relayed from transmitters in Africa on the Tropical bands.

These documents can be downloaded in pdf format from the Articles index on the BDXC-UK web site at:

http://www.bdxc.org.uk

Hi there

Why not the {Degen} Kaito 1103 then? About the same price and it's a
sensitive little radio.

Lucky

Thanks, dxAce! This has been a useful list in the past, and I'm glad that Tony has updated both of them. This time I'm going to see if I can convert it into a datafile that ERGO software can use.

That's all just lovely. I love you too.

AOL had 5 or 6 simultaneous streams available. CSPAN style, no
commentary. 320 Kb second, full screen zoomable.

It's still playing replays. Free of charge. Right now.

Tai Ping Yang, your world is too small and shallow, kid. You have no clue of the French or Greek concept of freedom and human rights. You bought the whole story because you have no other frame of reference (Ignorance is bliss).

BTW it's insulting to call USA America; what about Canadians, Mexicans, Brazilian..... . You just decided to co-opt the entire continent. Coming from an Asian, you should be sensitive to other people and a little more knowledgeable of other cultures history.

now that makes a lot of sense, you state that it doesn't 'absolutely
declare a revolution", then go on to point out that it 'was indeed a
revolution', clearly actions spoke louder than words and men spoke
with actions as opposed to mere words

a rose by any other name, still a rose

an undeclared revolution, still a revolution just by nature

2797. Listening to the BBC on an inexpensive shortwave radio

Newsgroup: rec.radio.shortwave
Date: 2005-07-04 20:53:17 UTC
From: DJ <Replytolist@this.list>
Message-ID: <FJGdnaXjhsEhPFTfRVn-2A@comcast.com>

Have a friend who listens to tape delayed BBC broadcasts on local FM station. Would like to get him an inexpensive ($100 or less) shortwave radio so he can hear the real deal live. He won't install a secondary antenna, so a unit with a good antenna is a must. Digital tuning (ie, the ability to see the frequency) would be nice, too. He is in northern Indiana, USA. Thanks for any tips/advice.

If what you want is something for program listening, in portable,
I like Panasonic RF-B65. Good sensitivity off the whip, with the
ability to use a random wire or small active, decent but not
exemplary selectivity, and exceptional audio in a portable. Digital
tuning, on a wheel or direct input. A handful of memories. Even twin
timers, and SSB if your friend wants to move into something more
than program listening. Good battery life. And build quality is good.

This radio is out of print, of course. But you do find them on
the used market well within your budget. Most of the $100 portables
out there, today, are not up to the same standard.

If you're determined to buy new, look at the Universal Radio,
CCrane and Grove websites.

There are still people buying portables by
Lex-Tecs-Pass-dig-sahn, or whatever the f*ck they call themselves
this week, with mixed but generally favorable results. Most of which
fall within your budget. One of the more popular being S350.

Sangean fields several in your price range. ATS 404, PT-50 come
to mind off the top. Ok. Not impressive, but ok.

Take the time to hit some of the dealer's sites, and, if you can,
try to get some hands-on locally.

And if you look carefully, you can find some much better radios
on the used market within your price range.

XM has a delightful little unit for under $50. Rig up a 12 Vdc
adapter and a pair of powered speakers and you'll have the BBC World
Service 24/7/365, in HiFi sound, for under $100.

There is $13/month fee, but they also have lots of music and stuff.

The people in prison are not part of what is to become a the new
Iraqi army. Yes, one is being trained but it still needs a lot of work
and I'm sure they don't want people they can't trust serving with them.

> similar, except for the digital readout.

The FRG-7 is a true Wadley Loop design, three IFs and all. These are a bit problematic because of their very wide 1st IF (remember, 1 MHz spread) and thus plenty of potential for intermod. (The Sony analogs with the "dual conversion light" concept using 10.7 MHz / 455 kHz are a good example. My ICF-7601, while being fairly sensitive, regularly drove me nuts when the respective band got a bit more crowded. At least the FRG-7 uses a mixer based on a dual gate MOSFET.) The R-1000 is a fairly conventional dual conversion rig with a high 1st IF, only the frequency synthesis is a bit funky. (I'll have to look at it again one day, didn't really get the hang of it last time. Not too surprisingly, given my level or rather lack of experience in these things.) This generation of receivers - to which, as I mentioned, the FRG-7700 belonged as well - came out a few years after the venerable FRG-7.

its all in the oil, we will have them trained and be ready to leave,
just about the time the oil runs out, unless we can find people we can
'trust' (put into office and which will allow us to steal the oil
without having to maintain a physical presence there)

These guys missed you when you went away, there, for a little while.
Myself, I'm the personification of indifference.
It's the 4th of July. People are sacrificing their lives for a
woman's "right to choose". For men to have the right to "marry" one
another. And of course, for the right of a general "freedom from
religion".
May The God of all creation have mercy on our souls.

Darren

BBC World Service is streamed online (at www.bbc.co.uk/worldservice),
isn't it? Okay, occasionally they won't play a particular program
online, but at least (a) it's free (assuming he has an Internet
connection), and (b) it's not subject to having to search for a signal
that's not aimed to North America.

But that is exactly what a lot of the world thinks about the US now. Invading another country that did nothing to deserve it, except for the sin of having oil, was about as low as a government can go. I can see the Germans in WWII calling the Polish resistance 'enemy combatants'. Calling something a name you'd like it to be, doesn't make it so.

The attack on Iraq and Afghanistan was and is an abomination perpetrated by evil doers for their own private and corporate gain. You know it. Don't fight the truth. Give in to the *good* side of the Force..

==========

==========

This .sig file will continue until Mister Fort posts a sincere apology to all cancer victims and their families. His refusal to do so says more about his attitude and upbringing than any of his thoughtless and hurtful postings in rec.radio.shortwave. He seems to be very proud of the fact that he can buy expensive radios using the refunded deposit money from his empty beer containers and has frequently posted the fact. It appears he is well on his way to purchasing his next radio.

Many years ago, I trained Bees to do just that. They were conditioned to sting the male appendage whenever it was made available for urination. I had visions of great wealth being made with this 'organic' enlargement/enhancement process.

Well, somehow, unbeknownst to me, a strain of African killer bees made it into my trained hive. During the last stage of testing before the public offerings were to be made, disaster struck. I proceeded through the motions of aiming the research object and the bees came.

It's impossible to describe the horror. On recovering consciousness, I found I was so swollen I couldn't pull my pants up or go through a doorway sideways. I had to cover my deformity until all the brand new groupies disappeared.

It took the better part of a fortnight, but they drifted off. The grapevine has it they migrated over the Ace's house. They heard he's a huge one ALL the time and not just above the shoulders.

It's not bigotry if it's true.

You have sex (per your own admission) with other men.

Ergo, you're gay.

Where's the bigotry in calling you "gay" if you are indeed gay?

Or are you now withdrawing your claim of having sex with men?

If we ask you to leave, or be silent, it is "gay bashing", the "visual images" your "lifestyle" brings to mind is/are offensive to me.

No. This is not gay bashing, it is insane rudeness on your part, and like some spoiled child I expect that you will force your bad behavior on us all.

Rarely will I banish one to the "bit bucket", you make it easy to do so without regret...

Life is good<g>

I was thinking of the 750/5 (or was it/2?). I've been toying with an an idea of a hybrid using a VW motor. I just picked up a four speed transmission on eBay to go with the assorted bits and pieces I already have. An adapter plate would have to be made once I get the VW crankcases and crankshaft together.

Something along the lines of:

http://w6rec.com/duane/bmw/BMW-VW/

1600 cc should give lots of torque.

mike

Could suck worse.

Still riding the '90 K-LT, sold most everything else about 5
months ago, and picked up a '72 R60/5. Needs some attention, but
then so do I.

>

That's a whole lot of fabricating going on.

>

Have you ridden the Rocket III by Triumph? 2300cc's, 6
cylinders. You wanna talk about torque? And smooth as barber shaved
glass. Faster and quieter than my BMW. It's not a light bike, but
handles like a bike half it's weight. I got one from Marty in South
Heights for an afternoon. Damn! I had a Ferrari that didn't pull
that hard.

But a VW 1600 seems like more weight than you'd need in a frame
that small. Although the low C/M would make for more nimble handling

than you'd expect, stopping would be a bit of a challenge.

But the mandatory newsgroup question would have to be, what kind of radio you going to put on it?

I pulled the factory radio on mine, last year, and dropped my Becker Mexico in the hole. Light preamp for the whip and I was listening to shortwave on the road.

The factory radio is back in the hole,though. I'm using the Becker in my mini van.

I hope things work out well and not suck at all.

> That's a whole lot of fabricating going on.

Yes. Things are always easier when not actually doing the work yet.

Being in Canada, we only get the *three* cylinder 2300. I've seen it, but found
it repulsive, if not downright ugly. Suzuki's Madura of a few years ago stunk
too. I I were to get a new bike today, it would be a plain Ducati 1000s Monster.
Unfortunate name, but wonderful bike.

I wander around the wreckers two or three times a year, checking out the old
German cars for anything with a shortwave banded radio. No luck yet. They said

they'd keep their eyes open for me. A nice Blaupunk would be a welcome addition.

Not quite. Marx believed that religion artificially kept people from rebelling against capitalism by promising them paradise in the life to come. In Marx's view, people were promised a beautiful eternity in exchange for enduring wretchedness in their physical existences. Thus the famous statement that "religion is the opiate of the people". Certainly, in the real world application of Marxism (something Marx always had a shaky grasp of) the Party set itself up as God's replacement. But I don't think that was Marx's original intention.

> The human "belief" that there is no greater "Being" than himself is an

Huh? Do you know how many times the Bible has been altered? How many times the Levitical Laws were changed? Have you ever heard of the divine right of kings, where the king claimed that he was responsible only to God, thus giving him free rein to do as he liked, since God was conveniently absent? Do you know that for a thousand years Christians were prohibited from reading the Bible, thus keeping them ignorant about what it really said, allowing the Church to claim anything it wanted about what was in there? Absolute moral law is whatever the leaders say it is, except in Communism the absolute authority is Marx or Lenin or Mao instead of God. Li, you're still the starry eyed idealist that you were as a youth, only now the object of your idealism is religion and the US Constitution rather than Marx. Wake up and live in the real world for once in your life.

Atheism is not necessarily secular humanism. Atheism is the lack of
belief in a god, usually the Christian God, but often of all gods. That
is all. It does not imply secular humanism, or communism, or any other
philosophy that attempts to replace God and/or traditional morality. The
original form of Buddhism could be considered atheism, since Buddha did
not make belief in a God or the gods (he was East Indian) a centerpiece
of his faith. It was only after he died that he was declared a god, and
placed in a pantheon with other gods (look at Tibetan Buddhism). My
point here is to show that one can still be religious and be an atheist.

Checking the paperwork, yes, you're right, it IS a three. I must
be confusing that with the Valkyrie I rode most of that week. Also
didn't suck.

All that has nothing to do with the ARRL being some reason for *you* not
getting a license. If you really wanted to put forth the effort to get a
license you would, ARRL or no ARRL. You just want to whine.

That show was curious, buth this evening's show will be FAR MORE amusing!

Richard C. Hoagland, *James McCanney*, and Dr. Sky (aka Steve Kates)
will join together to talk about the Deep Impact Program and the
results of the probe's collision with Comet Tempel 1.

Dr. Sky (aka Steve Kates) is a reputable astronomer and speaker
but Hoagland and McCanney are two that prolly fell off the back of a
turnip truck in Arkansas. Hoagland will no doubt try to make a claim
the comet was part of an ailen spaceship or had some kind of a
face or other "non-natural" markings on it, and McCanney will likely
go on about Tesla or Chemtrails or some other goofy non-sequitor
topic. Should be a good show with lots of funny moments fer sure!

"Clowns to the left of me, Jokers to the right, here I am - stuck in the
middle with you....."

OF:

I'll tell you what then, I will go on being disgusted and speaking
against your despicable, deplorable, sick, perverted, insane
activities--and you go on screaming you are receiving a "bashing",
sounds quite fair to me...

If ever you tire of that game, just stop screaming...

John

Nope it remains bigotry if you hate black people even if the people in
question are black, ergo if you bash a person becuase you say they are
gay etc it is gay bashing

and bigotry

>
> You have sex (per your own admission) with other men.

realy? when?

>
> Ergo, you're gay.

Nope not nessaryly idiot I could be gay or i could be BI
>
> Where's the bigotry in calling you "gay" if you are indeed gay?

It is in saying I can't post or tin harrassing me for it

>
> Or are you now withdrawing your claim of having sex with men?

No nor am I confirming it either

It is none of your bussnes and has nothing to do with the ARS

in claiming it does YOUR prove yourself a bigot

>
> Steve, K4YZ

Oh, for crying out loud. Listen to you. So what if someone dislikes gays
(note no Caps there..) or has a dislike for blacks. Or Illegal Aliens. So
what?
What do you expect them to do? Roll over and go belly up simply because
"you" accuse them of being prejudiced? So, big deal. Who are you in the
scheme of things? What gives you the right?
One can easily loathe these Liberals who think, erroneously, that their

accusations of bigotry or racism will cause Mainstream Mr. and Mrs. America to recoil for fear of being 'branded' by the mewling leftistas as bigots. Sorry, boys. Your accusations no longer hold the sting they once did. Mr. and Mrs. America no longer care about you or your political correctness bovine scat.
Oh, and one more item for you Leftistas...it is my right to feel or be prejudiced and it is my right to flaunt it in your face.
Now, what are you going to do about it? Call me a "Bigot"?
Big deal.

So what I expect that hey can be deal with the fact it has nothing to
do with ham radio.

And I don't say that they can't hate and laothe me if they like merely
not harrass me for it

BTW if some of these Basers could admit they were doing it would be an
improvement

> What do you expect them to do? Roll over and go belly up simply because

Basic civil rights

> One can easily loathe these Liberals who think, erroneously, that their

Liberals? who you calling a Liberal, obviously you have been paying
attention

> accusations of bigotry or racism will cause Mainstream Mr. and Mrs. America

But not to try and harrass someone out of public life. I have always
agreed you have those rights

BUT one it is others that have engaged in stalking to find these
"facts" andd then try to use them to silence me and others

> Now, what are you going to do about it? Call me a "Bigot"?

So what:

Here where I live you get to see it all. Blacks here are terribly discriminated against. The cops seem to always be picking on the ones carrying stolen tv sets out of other peoples apartments, stealing cars, involved in drugs, rapes, gang murders, beatings, stabbings, etc. I think it is terrible, they should turn them lose from the prisons where they make up 80% of the population and go live next to "an_old_friend."

He could take care of them there and protect them from such vile and ugly treatment as being confined for committing crimes.

And I am prejudiced against felons, I don't want them in my neighborhood or around my children even though they are grown! (now if they prove themselves "rehabilitated" after a few years in public, I am willing to accept them back.)

Now if someone asks me, "Do you hate all blacks?" Of course not, the ones gainfully employed next to me and who are safe to be around I like. But it takes me a bit to figure out which is which!

And frankly, there have been a few who I was too anxious to trust and they proved that trust wrong--so I am a bit leery of all these days--including people as "white" as I am!

But sicko perverts like "an_old_friend", NO. I will always remain prejudiced to having such perverted people about me--my "pursuit of happiness" alone prevents this... they sicken me and I have the stones to say it!

Look, we've been through this before. I was interested in equipment design and construction, not operating it. I was planning on trying to market a 160 through 6 meter AM and SSB receiver I had designed when I was drafted. After I left the service I got home to find that my shop building had been damaged and torn down while I was in the army. All my notes, prototypes, parts and test equipment were gone. I didn't have the money to replace them at the time, and I had to find a job, buy a home and get on with my life. During my years of working in electronics I spent a lot of years working with RF. I was setting up a shop in my four car garage to have a place to work when i retire. The hurricanes last year soaked everything, and most of it is beyond salvage. I am 100% disabled and can't repair the roof.

You can think whatever you want. I had lost interest then, just like a number of licensed hams I know here in Florida. They haven't been on the air in years and most of them aren't bothering to renew their license when they expire. Are you going to bitch at them, too?

As far as movies, I have been to two movies since 1987, and I doubt that I will ever go back to a movie theater. My ears rang for three days from the excessively loud sound system, and I had a headache for a week.

I started the project below to keep myself busy a few hours a week, and to help others, rather than sit around and bitch about everyone else.

Mark, I don't "hate" you at all.

How can I "hate" someone I am laughing at so hard...?!?!

> > You have sex (per your own admission) with other men.
>
> realy? when?

Mark, you only make a bigger fool out of your self and
coincidentally prove my assertions that you're a liar by trying to
dodge and deny your alternative sexuality choices.

> > Ergo, you're gay.
>
> Nope not nessaryly idiot I could be gay or i could be BI

If your penis is invasive of other males, you are gay.

> > Where's the bigotry in calling you "gay" if you are indeed gay?
>
> It is in saying I can't post or tin harrassing me for it

Who said you can't post?

You're doing it, aren't you?

And what's "tin harrassing"...?

> > Or are you now withdrawing your claim of having sex with men?
>
> No nor am I confirming it either

You've already acknowledged that you do.

> It is none of your bussnes and has nothing to do with the ARS

It's "my bussnes" since you made a point of bringing it up in a public forum some several years ago. It's the "bussnes" of anyone who cares to read the old posts.

> in claiming it does YOUR prove yourself a bigot

In denying that you wrote what anyone who cares to research Google archives can see that you wrote proves you a liar.

Again...

You posted part of it, and made threats to use it

othercontiuedto post it in full

ALL of them enabled by your stalking and posting of my call

2872. Why did you say "shit" on the air??

Newsgroup: rec.radio.shortwave
Date: 2005-07-05 08:47:54 UTC
From: 11 Meter Shit <myname@hotmail.net>
Message-ID: <k0ikc15lctdj4rvik0f1nqbhuofokvjccp@4ax.com>
Source record: 26356
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.amateur.equipment

The FCC says that this guy must submit an EXPLANATION of why he said "shit" on the air on 2m FM simplex. Oh boy.

Are they listening to 11m CB or hams on 75m SSB at night?? Why pick on that guy?

http://www.fcc.gov/eb/FieldNotices/2003/DOC-249279A1.html

I think THEY should have to submit an explanation of why they ALLOWED shit on the air (BPL) - he he!

2873. WDLT 660 kHz Mobile AL on daytime power at night?

Newsgroup: rec.radio.shortwave
Date: 2005-07-05 09:32:00 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <42CA5397.6E2D@mindspring.com>
Source record: 26357

WDLT 660 Mobile AL is booming in in Central Ohio at 05:30 EDST, but
ought to be inaudible according to its license and nighttime pattern,
the last two days.

Maybe they're converting CST sunrise to CDST by subtracting an hour
rather than adding?
--

The major infraction was failure to identify - not the obscenity. Also,
the enforcement letter you cite is only half of the transaction. The
other ham with which he was in contact was cited for violations, too.

exactly, time to end it. We need to walk into iran and kick some
middle east hind-end and take their nuclear toys and threats away,
then move into syria

if the other children there then want to play nice leave, otherwise
finish the job there, we don't want to have to go back a third time
